

**Appendix A.
TDM**

Rapid City Area MPO 2045 Travel Demand Model Documentation and Validation Report

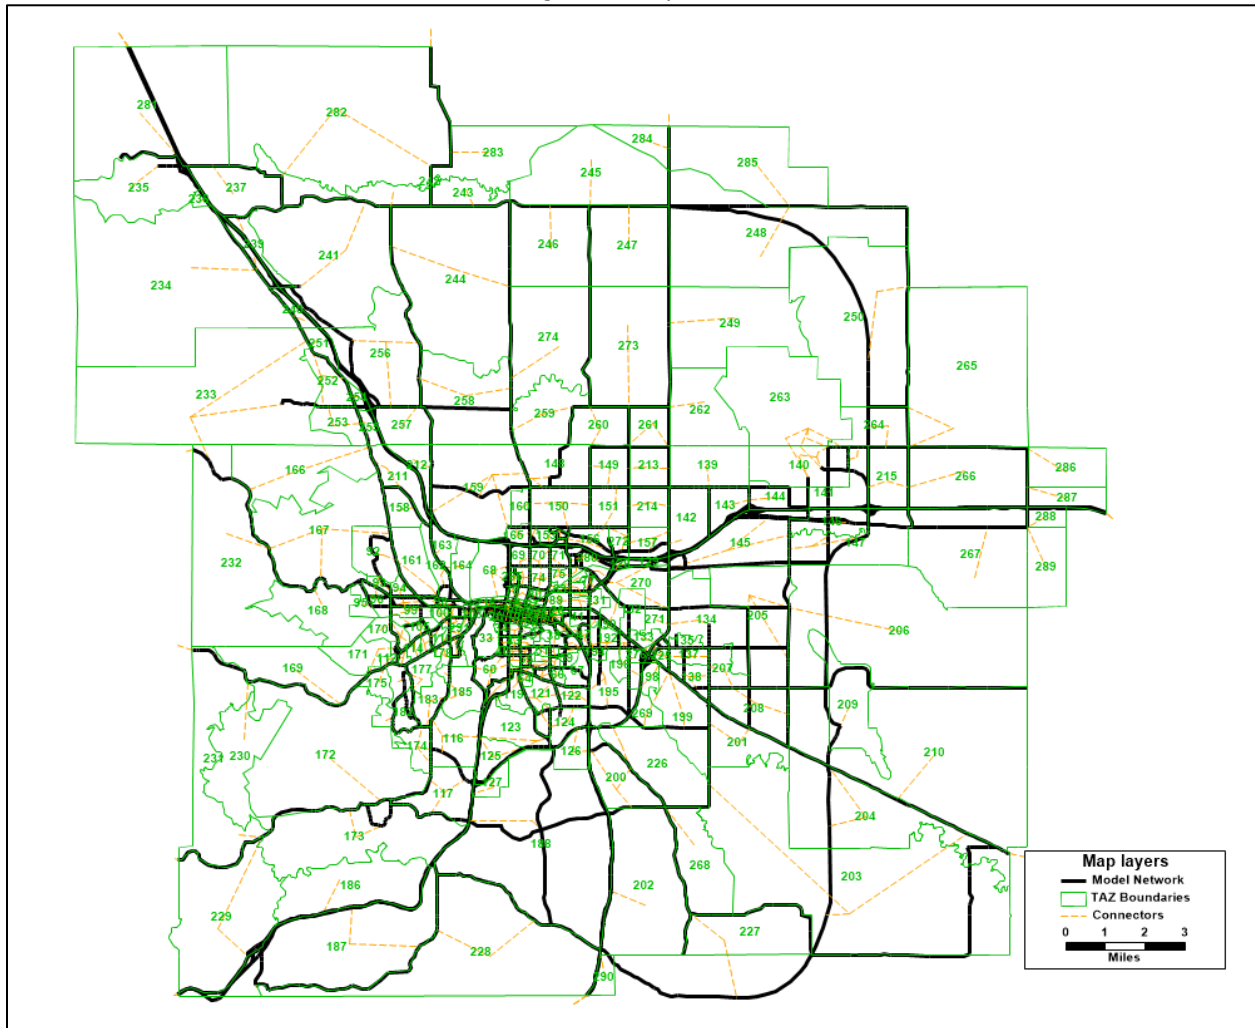

Introduction

This document provides a summary of the Rapid City Area Metropolitan Planning Organization (RCAMPO) 2045 travel demand model (TDM). A TDM is an important tool for transportation planning. The TDM estimates and distributes an area's trips across its street and highway network. The modeling process attempts to replicate existing traffic levels and forecast future traffic volumes based on anticipated population and employment growth. One of the primary purposes of the TDM is to support the development of the MPO's Long-Range Transportation Plan (LRTP). The model can be used to identify potential future deficiencies in the road network, and used to estimate the impacts of various scenarios such as adding new roads, changing the capacity of existing roads, or removing roads from the network.

Data Updates

Current or base year traffic conditions are calibrated to the year 2018 data. Using a single year of data to build and calibrate the base model allows the model to attempt to replicate known traffic conditions. Next, the best guess at future year socioeconomic and road network information is placed in the model to predict traffic conditions in the future. The RCAMPO TDM is built to forecast traffic conditions to a 2045 horizon year. A map of the model area is shown in Figure 1.

Figure 1 - Study Area

Network Updates

Base year road network attributes were updated to 2018 conditions using a road centerline shapefile provided by the South Dakota Department of Transportation (SDDOT). The primary model road network inputs are listed in Table 1. These field names are consistent with the 2040 TDM. However, the definition of the "CTLMED" field was revised to include both center turn lanes *and* left-turn lanes. The reason for adding left-turn lanes to the network is to more accurately estimate the capacities of roadways.

Table 1 - Road Network Fields

Field	Description
Dir	Link direction of flow
FT	Facility type
AT	Area type
AB_LN	AB direction lanes
BA_LN	BA direction lanes
SPLM	Speed limit
CTLMED	Presence of a center turn lane or median, or a left-turn lane

Numerous roads, particularly several I-90 ramps, required realignment because of recent road projects that had not yet been accounted for by the model road network. Aerial photos from 2018 were used as the data source for the realignments.

In addition to the realignment of roads, there were a number of non-local roads that were not in the model. Typically, an urban model will include most or all federal functional classification 1-6 roads, while local roads (federal functional class roads 7) are represented by centroid connectors. While not all non-local roads may be necessary for more accurate routing of traffic, in general most will probably help to represent traffic in a more realistic way.

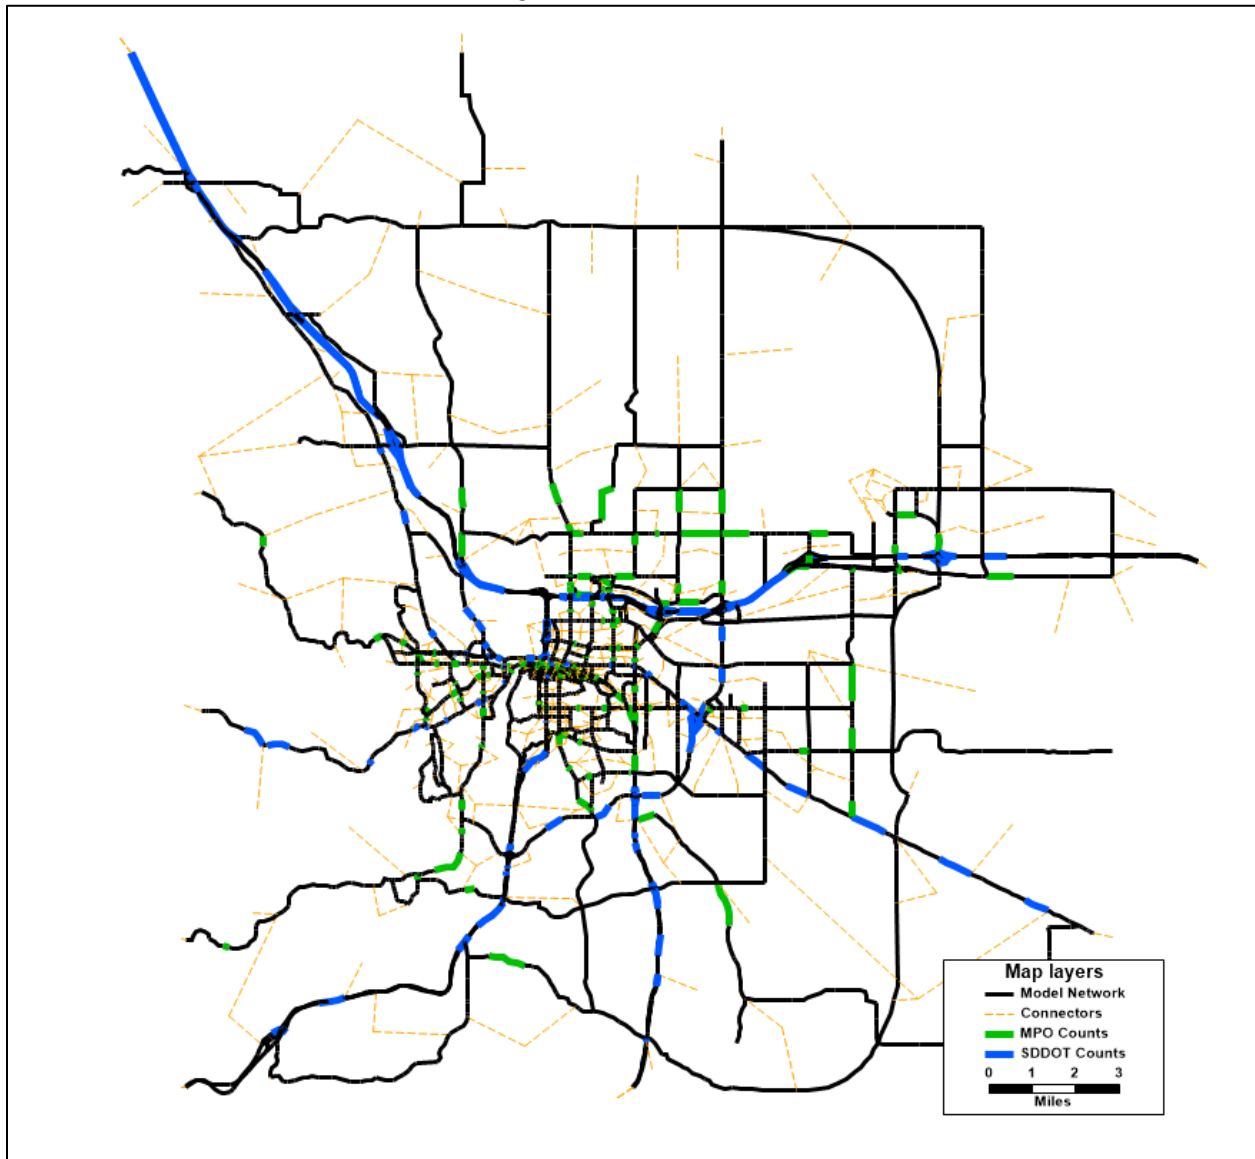

New capacity definitions and a capacity lookup process were added to the 2045 TDM. The capacities are based on the Florida DOT Quality Level of Service Manual and are shown in Table 2. The capacities vary by facility type (FT), number of lanes by direction (AB_LN or BA_LN), and the presence of a center or left turn lane (CTLMED). A capacity lookup table was added to the RapidCityDatabase.mbd Microsoft Access file that stores the majority of the data that is input into the model.

Table 2 - Capacity Lookup Values

Cross-Section	Interstate - LOS E/F Daily Capacity	Principal Arterial - LOS E/F Daily Capacity	Minor Arterial - LOS E/F Daily Capacity	Collector/Local - LOS E/F Daily Capacity
2-lane	N/A	14,160	12,744	9,600
2-lane with LTs	N/A	17,700	15,930	12,000
4-lane	84,600	29,850	26,865	20,237
4-lane with LTs	N/A	39,800	35,820	26,983
6-lane with LTs	130,600	59,900	53,910	N/A
8-lane	176,600	N/A	N/A	N/A

Another essential input to the TDM is traffic counts. Counts from the RCAMPO count program were used as a primary input. However, these counts occur primarily on minor arterial or lower functional classification roads. It is important for the model to be calibrated for the entire set of roads, and not just the lower functional classification roads. Therefore, a sample of counts from the SDDOT were used for state roads, which are primarily interstate and principal arterial functional classification. The counts by data source are shown in Figure 2.

Figure 2 - Count Locations

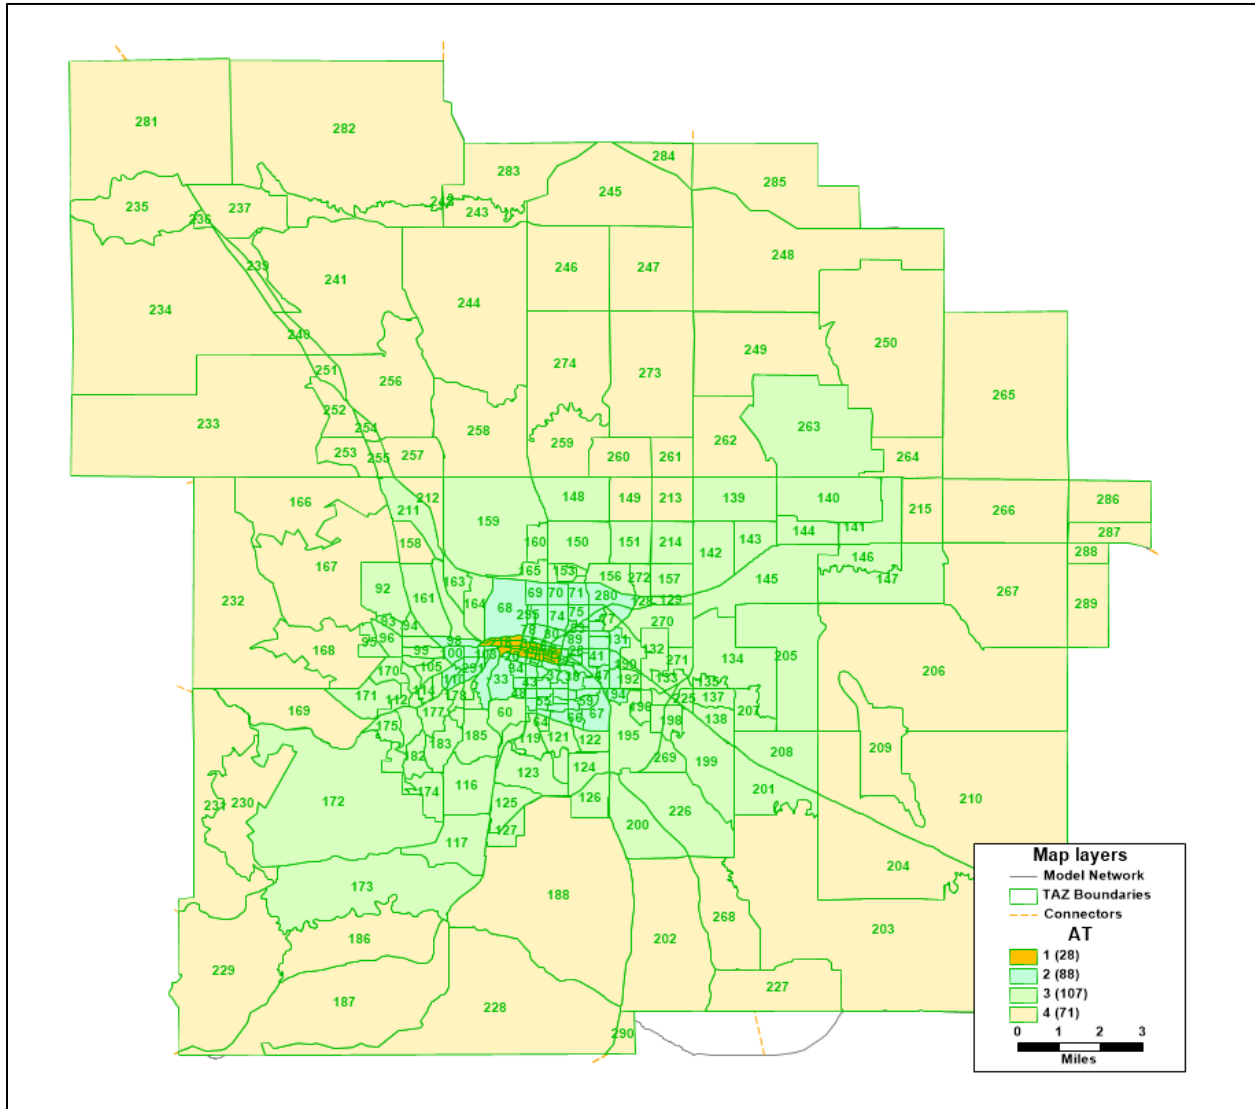

TAZ Updates

The model area is divided up into a number of Traffic Analysis Zones (TAZs). TAZs are geographical areas that represent groups of socioeconomic data that have somewhat similar trip making behavior. The TAZ can then be used as the unit in which the model generates and distributes trips. The RCAMPO TDM has 294 TAZs, which are shown in Figure 3. The majority

of input data that relates to the TAZs is stored in the RapidCityDatabase.mbd Microsoft Access file, and can be joined to the TAZ file for mapping or analysis.

The TAZs are split into four area types (Central Business District, Urban, Suburban, and Rural). The area types of TAZs are naturally changing over time as the MPO area changes. These areas types were updated using aerial photos.

Figure 3 - TAZs and Area Types

Database Updates

The RapidCityDatabase.mbd Microsoft Access file is used to store the majority of the model input data, as well as lookup tables and parameters that are used by the script when running the model. The benefits of storing inputs in the Access database are discussed in the 2035 Model User's Guide. A decision was made to continue using the Access database to manage the data. This allowed for continuity with previous model versions. The tables were updated as discussed in Table 3.

Table 3 - Database Updates Summary

Table	Use	Updates Made
aRegBivarPct	Household auto ownership and household size cross-classification percentages by TAZ	Complete revision of household disaggregation process
aSEData	Household and employment by TAZ	Updated to 2018 base year and 2045 horizon year
aSpecialGen	Special generator TAZs for unique land uses	Updated to 2018 base year and 2045 horizon year
aZoneData	Additional TAZ information (area type and external designation)	Updated to 2018 base year and 2045 horizon year
bAttractionRates	Trip attraction rates	Combined Other-Based Other and Work-Based Other trip purposes into Non-Home Based.
bProductionRates	Trip production rates	Combined Other-Based Other and Work-Based Other trip purposes into Non-Home Based. Combined size four and size five plus households into a size four plus households category to match available trip rate data
bTripRateFactors	Trip generation factors by area type and trip purpose	Central business district increased to 1.15. All others increased to 1.05. (See calibration section)
aEETrips	Through trip (external-external) trip table	Updated to 2018 base year and 2045 horizon year
aLETrips	External-internal/internal-external trips by trip purpose	Updated to 2018 base year and 2045 horizon year
aFrictionFactors	Gamma coefficients for gravity model friction factor curves	Updated to NCHRP 716 industry standards
aTerminalTime	Additional time by area type for each trip	No edits
aPeriodFactors	Factors that convert daily trips to time-period trips.	No edits
bRoadwayLookup	Capacity and alpha/beta lookup table	Complete revision of capacity lookup process

The majority of input tables were updated to a new base year. Some tables that provide input factors were left unedited because the values are industry standards, but could be updated in the future with a household travel survey or other data sources. Minor updates were made to the trip rate tables to combine Other-Based Other and Work-Based Other trip purposes into

Non-Home Based. As discussed in the 2040 TDM documentation, validation data typically does not distinguish these trip purposes. Additionally, industry-standard input parameters are generally more available for a combined Non-Home Based trip purpose category. Thus, combining these trip purposes makes the use of the model simpler without jeopardizing performance. The four trip purposes used in the 2045 model area listed in Table 4.

Table 4 - Trip Purposes

Trip Purpose Abbreviation	Trip Purpose
HBW	Home-Based Work
HBS	Home-Based Shopping
HBO	Home-Based Other
NHB	Non-Home Based

The two structural updates to the input tables were to the capacity lookup table (discussed above in the Network Updates section) and the household disaggregation process. The updated household disaggregation process uses a 2016 polygon shapefile from the Census Transportation Planning Products Program (CTPP) that provides the Census surveyed number of households within each household size and auto ownership category from 1-4+ household sizes and 0-3+ autos owned. These percentages are then multiplied by the household data in the TAZs to split each TAZ into household size and auto ownership groups that can be multiplied by the trip production rates.

Non-structural updates were made to several other tables. aSEData, aSpecialGen, and aZoneData represent the TAZ and socioeconomic data updates to the new base year. The special generator productions and attractions were updated using employment figures and Institute of Transportation Engineers (ITE) trip rates. These were then revised if the quantity of trips mismatched the nearby counts. The special generators are shown in Table 5 below. The socioeconomic data for 2018 and 2045 are shown in the Appendix.

Table 5 - Special Generator Productions and Attractions

Special Generator	TAZ	2018 Productions	2018 Attractions	2045 Productions	2045 Attractions
Hospital	64	2,525	14,916	5,049	21,129
Civic Center	79	555	2,353	832	3,528
Ellsworth AFB	140	1,189	2,927	1,189	2,927
Ellsworth AFB	263	3,740	8,699	4,984	11,593

The other group of data updates in the Access file is for the external trips. Both aEETrips and aLETrips were updated to a new base and horizon year. The 2040 model update relied on the *Rapid City Area Origin-Destination (OD) Study (June 2014)*, with data collected by AirSage. The distribution of external trips to other externals was used as input to the external analysis. These are External-External (E-E) trips. The trips that have one end at an external station and do not have the other trip end at another external station are External-Internal (E-I) trips.

The E-E and E-I distribution was kept the same as the 2040 model. The trip purpose split for E-I trips was also kept the same. Counts were updated to the new model base year. E-E trips were then fratedred for new input totals. The forecast volume targets for the horizon year were provided by the SDDOT for the majority of the stations. A linear trendline forecast was attempted for the remaining stations, but because of a lack of data a 10% growth assumption was made in some cases. A map of the external stations is shown in Figure 4. A summary of the external stations and counts is shown in Table 6.

Figure 4 - External Station Locations

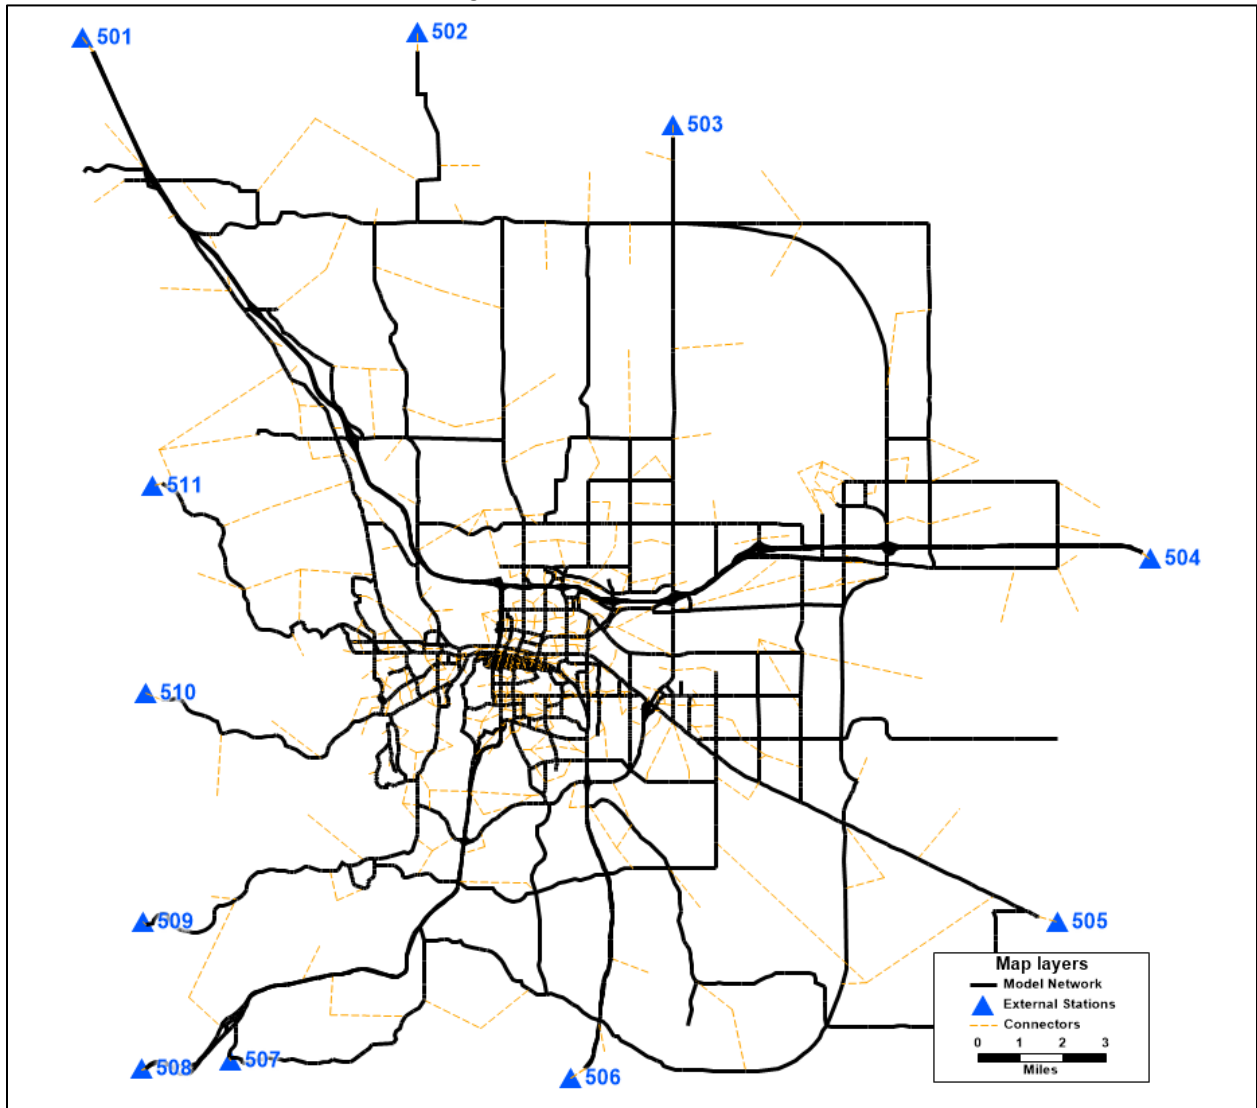

Table 6 - External Station Summary

TAZ	2018 Count	2018 Source	2045 Forecast	Forecast Source
501	19,150	SDDOT Count	26,120	Traffic.shp Adt25YrPro*
502	40	No Data	44	10% growth
503	80	No Data	88	10% growth
504	10,640	SDDOT Count	16,300	Traffic.shp Adt25YrPro*
505	2,280	SDDOT Count	3,748	Traffic.shp Adt25YrPro*
506	7,470	SDDOT Count	9,771	Traffic.shp Adt25YrPro*
507	1,231	Sum of two nearby counts	1,354	10% growth
508	8,600	SDDOT Count	14,138	Traffic.shp Adt25YrPro*
509	1,111	MPO Count	1,222	10% growth
510	2,851	SDDOT Count	4,687	Traffic.shp Adt25YrPro*
511	1,576	MPO Count	2,009	Trendline using historic counts

*Linear growth from 2043 to 2045

Model Version Update

The RCAMPO TDM user interface and script that was used by the 2040 model was transitioned from version 5 to version 8 of TransCAD. Each button was reviewed and if necessary edited to remove any glitches that resulted from the version update. Additional updates were made to the default parameters in the Advanced tab of the Scenario Editor to allow for the revised components in the 2045 model. For example, the default trip purposes were edited to accommodate the merging of the OBO and WBO to a single NHB trip purpose. For full details on using the user interface, the 2040 model documentation should be consulted.

One utility button in the user interface that was not updated was the Performance Report button. This report is supposed to provide validation statistics. The feature was not working in TransCAD version 5. Therefore, the button was completely removed from the user interface to prevent confusion. The script still contains the Performance Report lines of code, so the button can easily be added back to the user interface in the future if there is a desire to fix the procedure. In lieu of the automated Performance Report, spreadsheet templates were used to gather validation statistics.

Calibration and Validation

The goal of a model is to create as realistic picture of travel as possible. As such, development of a model is not done until the model is calibrated to match local travel conditions. For example, numerous non-local inputs and parameters are often borrowed from industry standards during the development of a model. Yet, travel is dynamic and unique in each community. Therefore, results need to be reviewed in detail and potentially adjustments need to

be made to inputs or parameters to match local conditions. Each adjustments need to be done without unreasonably modifying inputs to unrealistic values.

Validation refers to the statistical and non-statistical reasonableness checks used to assess the accuracy of the model. There are numerous validation checks that could be performed, oftentimes depending on the availability of data to use for the checks. The best practice is to perform validation checks on each major step of the model process. This helps to ensure that data and model structure errors are limited or completely omitted throughout the process, and that the model will be flexible enough to use as a forecasting tool. The main validation checks and calibration adjustments are discussed below.

Trip Generation Validation Checks

Two common validation checks for the trip generation step are the ratios of unbalanced productions and attractions by trip purpose and the total trips per household.

Because each trip has a beginning and an end, it is necessary for there to be an equal number of productions and attractions by the end of trip generation. While in practice, unbalanced productions and attractions are never completely balanced due to different data sources and trip rate sources, the ratios of productions and attractions by trip purpose should be reasonably close prior to balancing. If they are not, then it could be because of a data error or a model processing error.

The Travel Model Improvement Program (TMIP) Travel Model Validation and Reasonableness Checking Manual recommends a ratio of between 0.90 – 1.10 for unbalanced productions and attractions preferably. The ratios for the RCAMPO TDM are shown in Table 7 below. Each trip purpose, besides home-based work (HBW) is within the recommended ratio. While HBW did not quite meet the 0.90 threshold, it should be pointed out that these ratios should be thought of as a spectrum. The HBW ratio is very close to 0.90, and thus no egregious error in the trip generation inputs is likely since other ratios are comfortably within the recommended range. Additionally, the overall ratio of 0.96 indicates that trip generation results are satisfactory.

Table 7 - Unbalanced Production and Attraction Ratios

Purpose	Ps/As	Ratio
HBW_P	92,938	0.89
HBW_A	104,330	
HBS_P	113,604	0.92
HBS_A	123,462	
HBO_P	166,158	0.92
HBO_A	181,368	
NHB_P	268,877	1.03
NHB_A	261,384	
SUM P	641,577	0.96
SUM A	670,544	

The final step in trip generation is to balance these trips. Once trips are balanced, the average total number of trips per household can be calculated. While trips per household will naturally

vary throughout the country, the expectation is that the model should produce an amount of trips per household that is reasonably close to national guidelines.

Original model results produced 10.29 balanced trips per household. TMIP recommends about 10.70 trips per household for MSA populations less than 250,000. While 10.29 is not significantly different, local knowledge and experience suggests that a smaller MPO in the Great Plains region is likely to have slightly more trips per household than the national average, not less. Thus, trip rate adjustments were made to increase trips per household and generate more trips overall. The adjustments are shown in Table 8. The resulting trips per household for the calibrated model is 10.72, shown in Table 9.

Table 8 - Trip Rate Adjustments

Area Type	Trip Rate Adjustment
Central Business District	1.15
Urban	1.05
Suburban	1.05
Rural	1.05

Table 9 - Balanced Trips per Household

Model Estimated*	MSA** population less than 250,000
10.72	10.70

*Model balanced trips

**Metropolitan Statistical Area

Trip Distribution Validation Checks

The trip distribution step takes the balanced trips and for each TAZ allocates them to other TAZs based on network travel times and friction factors. This is done using the gravity model within TransCAD.

Figures 5 - 8 below show the friction factor curves for each trip purpose. The x-axis represents minutes and the y-axis represents the utility of making a certain distance trip. For example, the longer a trip is, the less desirable it becomes. These vary by trip purpose, however, as people will typically travel farther for a work trip than other trip purposes. This is represented by the flatter curve in Figure 8 relative to the other curves.

The inputs for these curves come from the National Cooperative Highway Research Program (NCHRP) Report 716 Travel Demand Forecasting: Parameters and Techniques, which is a primary source for travel demand modeling parameters and methods.

Figure 5 – HBW Friction Factor Curve

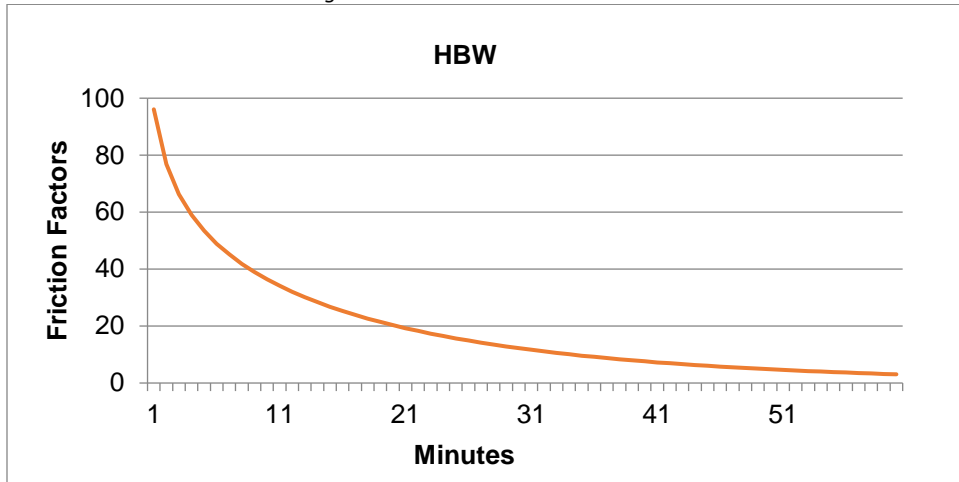

Figure 6 – HBS Friction Factor Curve

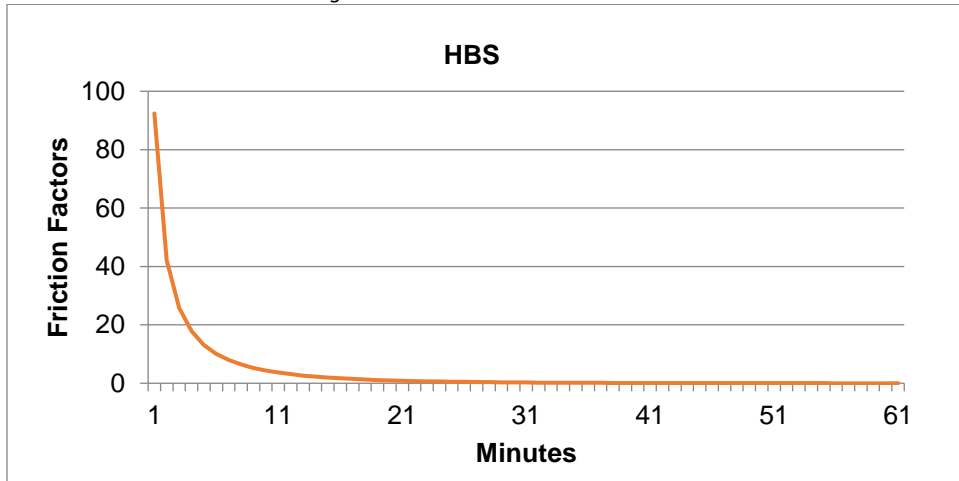

Figure 7 - HBO Friction Factor Curve

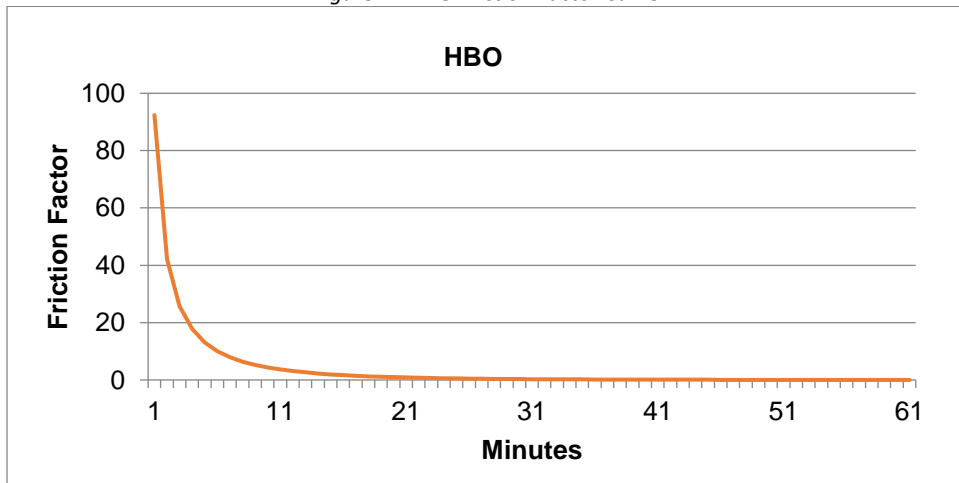

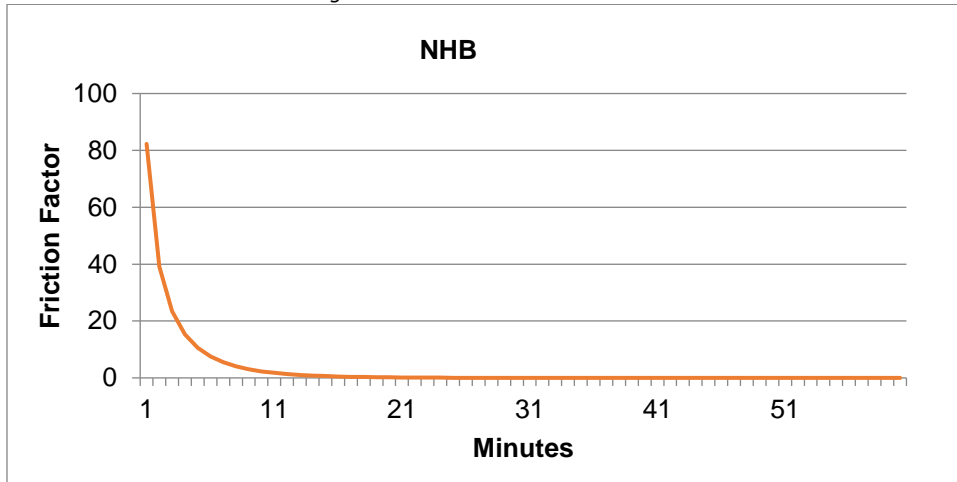

Figure 8 - NHB Friction Factor Curve

During the trip distribution gravity model, K-factors can be added to reduce or enhance origin and destination pairs that the gravity model does not represent accurately. In the RCAMPO TDM the amount of trips from the northwest portion of the model overestimated the amount of longer trips to the rest of the model. This was reflected in the overestimates of counts on the limited number of roads between those locations. A K-factor of 0.75 was added to and from the northwest TAZs shown in Figure 9 to all other TAZs. The K-factor reduced the overestimate of traffic volumes along these roads and works because the nature of these trips is different because they are likely to draw from a more localized area. If a regionally-significant development were to be modeled here, it is recommended that the K-factor be revisited.

Figure 9 - K-factored Northwest TAZs

Without a household travel survey, the only trip purpose that can be somewhat equally compared with another data source is HBW. Census Transportation Planning Products (CTPP) provides average travel time for Journey-to-Work survey data. HBW trips from the AM time period in the model were used for the comparison since most HBW trips from home to work occur during that time period.

Table 10 - Average Travel Time

Model Estimated AM HBW Travel Time	CTPP Journey-to-Work Travel Time
12.78	13.90

One trips are distributed, some conversions need to be made to the trip table including the conversion of person trips to vehicle trips. This is done by applying auto occupancy factors. Without a household travel survey, auto occupancy factors must be borrowed from another source. The one exception is for the HBW trip purpose, in which CTPP Journey-to-Work data was used to estimate. Then, because it is another MPO in the Great Plains region of the country with similar model trip purposes, the Grand Island Area Metropolitan Planning Organization auto occupancies were borrowed for the other trip purposes. Finally, since the HBW trip purpose

auto occupancies were lower for Rapid City, all of the other Grand Island auto occupancies were factored down equally. These slightly lower auto occupancies are reflective of community farther west and in a more rural part of the country than a national average community. These are shown in Table 11.

Table 11 - Auto Occupancy Factors

Trip Purpose	Auto Occupancy
HBW	1.06
HBS	1.58
HBO	1.58
NHB	1.52

Traffic Assignment Validation Checks

During the calibration of assigned vehicles on the roadway phase, numerous connectors were added and centroid locations were revised to ensure that traffic loads to the road network more realistically. These are localized adjustments that helped to balance out traffic on lower functional classification roads mostly.

One additional calibration adjustment that was made was a global speed adjustment to minor arterials and collectors of three miles per hour. Assignment results initially showed a large bias toward interstate and principal arterials when compared to traffic count data. The three mile per hour speed adjustment balances out traffic among all functional class roadways more evenly. This adjustment impacts the network shortest path travel times used to distribute trips, as well as the routes that traffic assignment assigns to the road network.

The goal of a TDM is to replicate travel patterns as accurately throughout each step of the model. Yet, ultimately, the model should have a strong correlation with count data. The count data in the RCAMPO TDM are a mixture of MPO and SDDOT counts, with the MPO counts generally representing minor arterials and collectors and SDDOT representing interstate and principal arterial.

A comparison of model estimated Vehicle Miles Traveled (VMT) to VMT for available count locations shows that all functional class roads are within the validation goals provided by FHWA in 1990 (Table 12). Volumes are slightly underestimated on lower functional class roads compared to count data in terms of VMT, yet still within validation guidelines.

Table 12 - Model-Estimated VMT by Functional Class Compared to Observed VMT

Functional Class	Number of Counts	Vehicle Miles Traveled (VMT)		Error		Validation Goal*
		Estimated	Observed	Difference	Percent	
Interstate	74	318,799	306,262	12,538	4.1%	+/-7%
Principal Arterial	72	144,686	155,990	-11,304	-7.2%	+/-10%
Minor Arterial	104	165,220	173,562	-8,342	-4.8%	+/-15%
Collector	59	26,796	32,207	-5,411	-16.8%	+/-20%
Total	309	655,502	668,021	-12,519	-1.9%	N/A

*FHWA-1990 goals

Percent Root Mean Squared Error (%RMSE) measures the average error between the model estimated volumes and count data. The lower the value, the less difference, or error, there is between the model-estimated volumes and the counts. Tables 13 and 14 show the %RMSE

stratified in two different ways: by volume groups and by functional class. The %RMSE in the RCAMPO model is easily below the preferable validation target for most volume groups, and well below the acceptable validation target for all volume groups. No validation guidelines are listed by functional class, but it is typical to expect a total model %RMSE to be at least under 35% and preferably under 30%.

Table 13 - Percent Root Mean Squared Error by Volume Groups

Low	High	Number of Counts	% RMSE	Validation Goal*	
				Acceptable	Preferable
0	5,000	123	44.93%	100%	45%
5,001	10,000	87	24.85%	45%	35%
10,001	15,000	41	21.46%	35%	27%
15,001	20,000	39	18.47%	30%	25%
20,001	30,000	16	16.13%	27%	15%

*Florida Standard Urban Transportation Modeling Systems (FSUTMS)

Table 14 - Percent Root Mean Squared Error by Functional Class

Link Type	Number of Counts	% RMSE
Freeway	74	23.24%
Principal Arterial	72	25.55%
Minor Arterial	104	20.64%
Collector	59	48.78%
Total	309	25.56%

Screenlines and cordon model estimated volumes compared to counts are another common check of assignment results. The benefit of checking screenlines and cordons is the more localized regions of the model can be reviewed for accuracy. The eight screenline and two cordons used are shown in Figure 10. Table 15 summarizes the results. It is preferable for the model estimated volumes to be within +/- 10% of the counts, keeping in mind that these are a small subset of counts. Only one screenline is beyond the 10% threshold.

Figure 10 - Screenline Locations

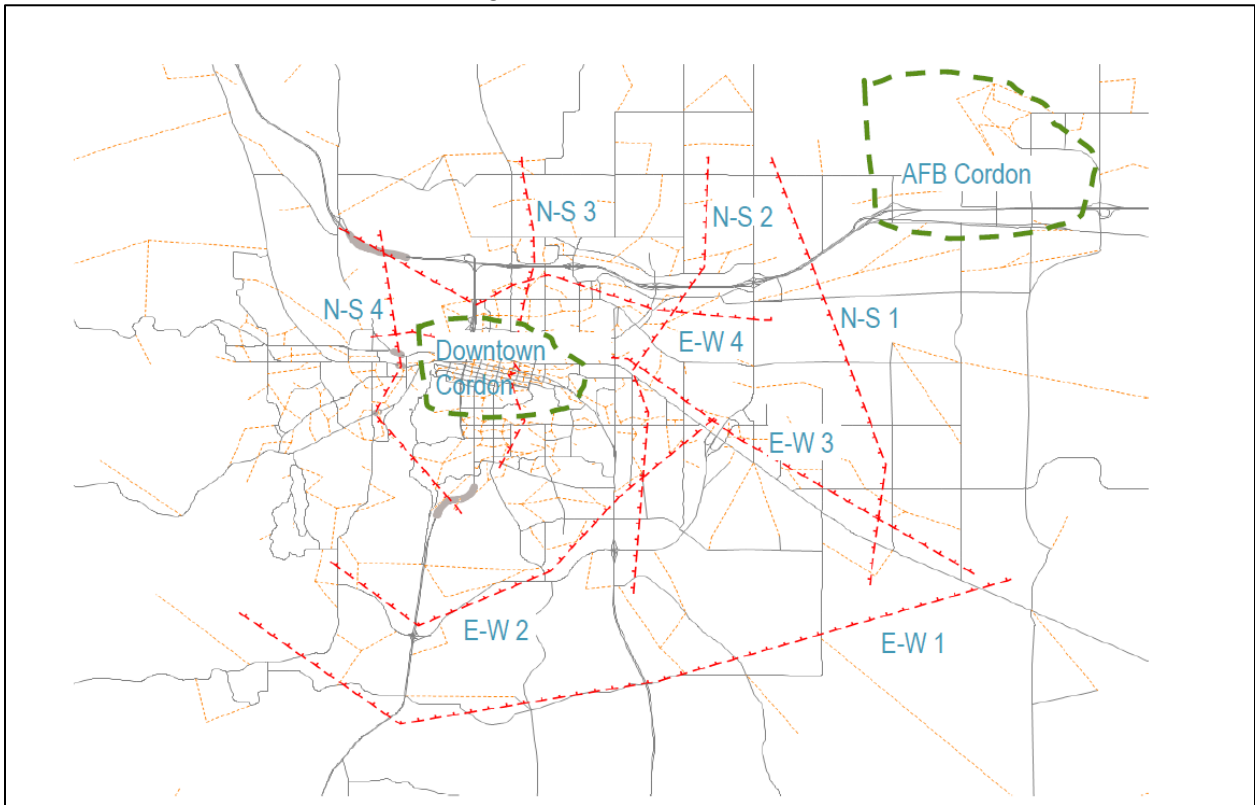

Table 15 - Screenline Summary

Screenline/Cordon	Count Total	Model Volume Total	Percent Difference
E-W1	40,113	36,795	-9.0%
E-W2	75,472	68,999	-9.4%
E-W3	125,012	115,904	-7.9%
E-W4	109,615	95,579	-14.7%
N-S1	36,628	35,834	-2.2%
N-S2	77,799	78,096	0.4%
N-S 3	110,673	104,122	-6.3%
N-S4	88,350	97,397	9.3%
Downtown	207,309	189,481	-9.4%
South Air Force Base	17,408	16,523	-5.4%

While overall validation results for the RCAMPO TDM are very good, the ultimate goal of the model is to forecast traffic. Thus, the growth and future level-of-service can be reviewed for reasonableness to ensure the model is sensitive enough to be used as a forecasting tool. Figures 11 and 12 show the growth (or decline) by TAZ in the RCAMPO TDM for households and employment. Growth is scattered around the model area, but the TAZs to the west of the urbanized area show the least amount of growth.

Figure 11 - Forecast Household Growth

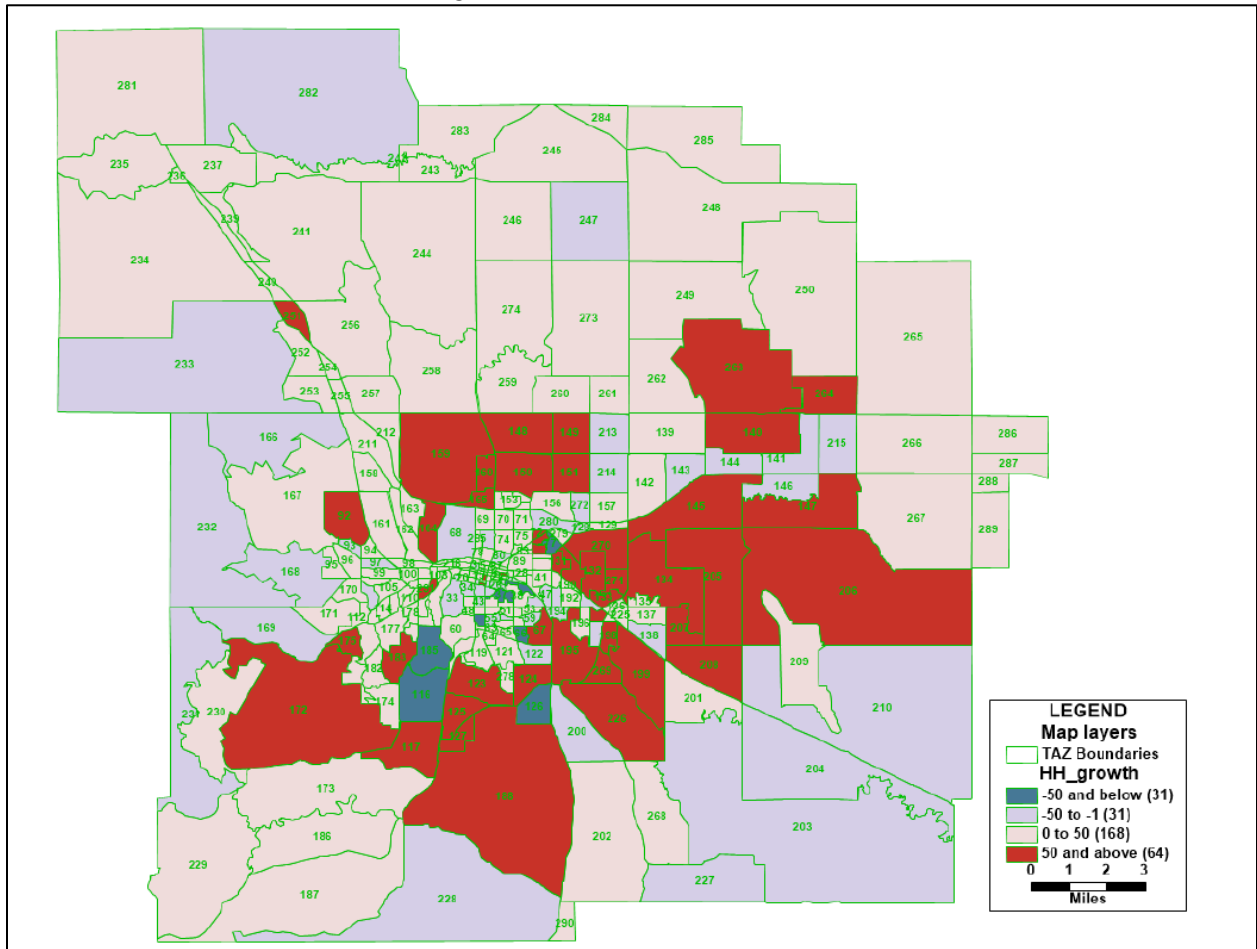

Figure 12 - Forecast Employment Growth

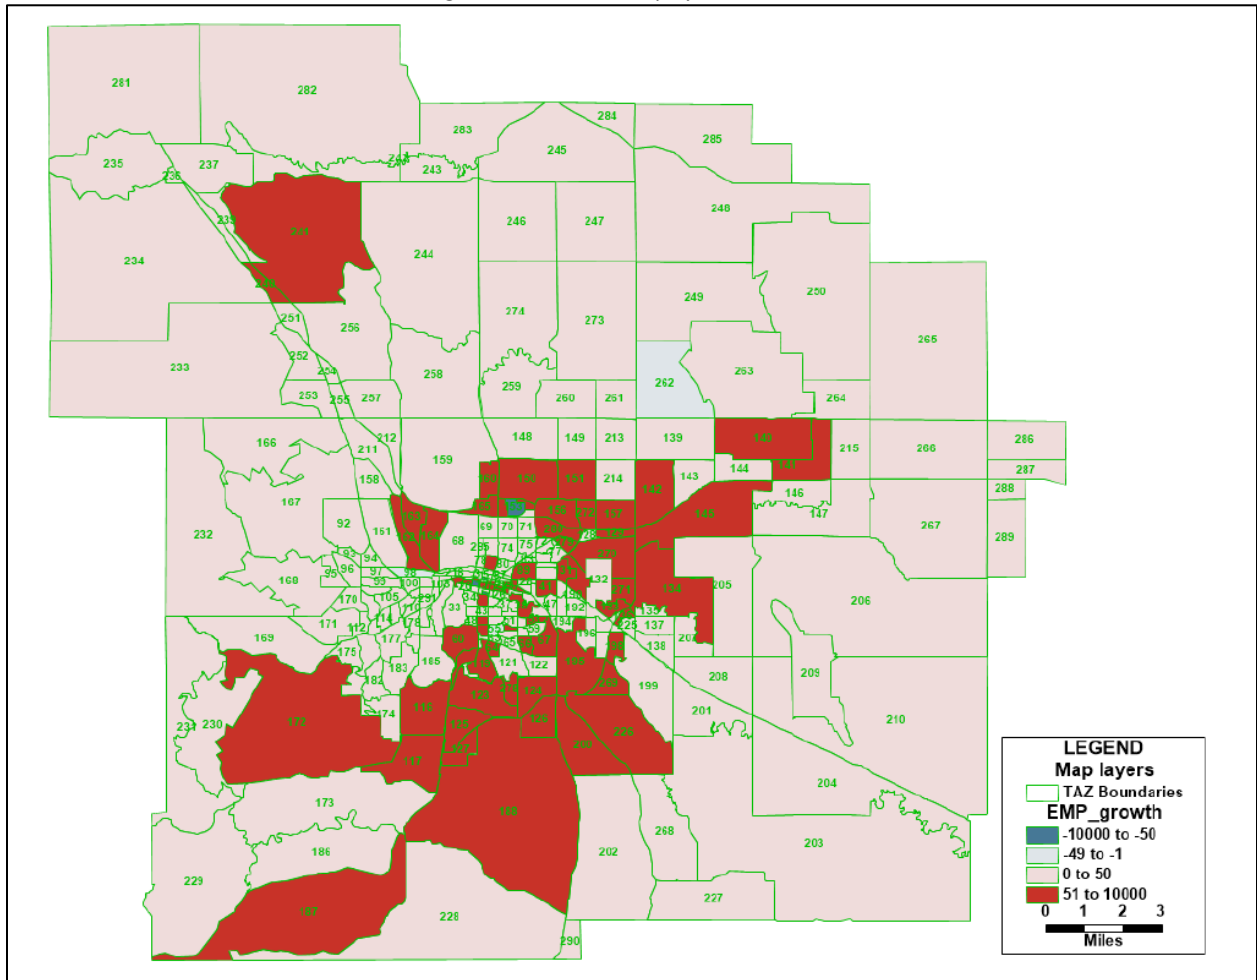

Figure 13 shows the magnitude of growth on the road network when comparing a base year 2018 model run to a 2045 forecast run with an existing (2018) road network. Similar to previous two figures, the least amount of growth is to the west of the urbanized area.

Figure 13 - 2045 No Build Compared to 2018 Base Magnitude of Growth

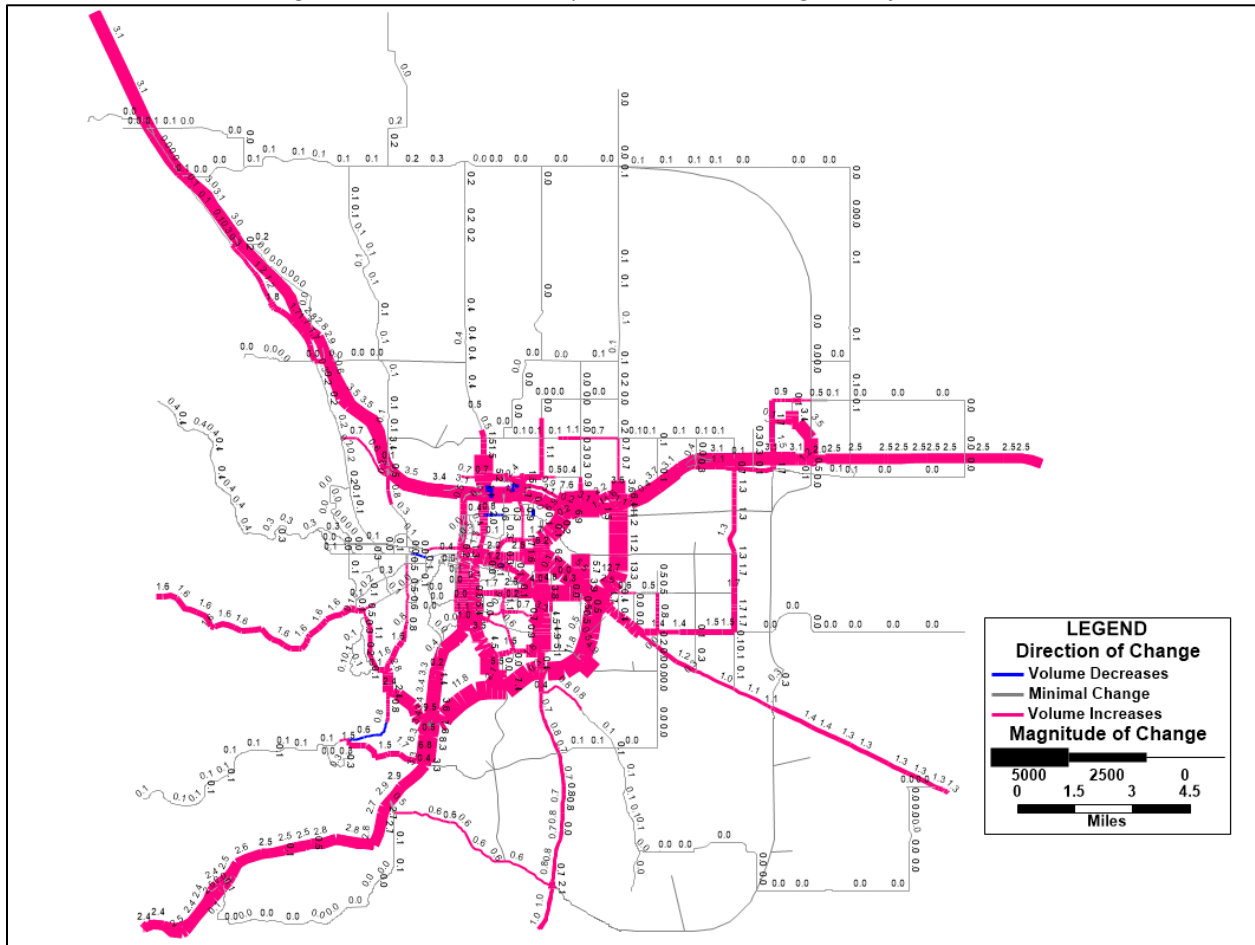

Figure 14 shows the predicted level-of-service for 2045. While congestion is very limited in the base year, more congestion starts showing up in spot locations in 2045. Similar to the previous figures, more LOS D-F roads are on the south, east, and northern portions of the urbanized area where more growth is expected.

Table 16 shows a summary of growth. Employment growth outpaces household growth, which is common in forecasts. Because the majority of trip purposes are balanced to households, the balanced trips grow closer to the percentage of household growth. Both VMT and VHT grow by slightly higher amounts, which can be expected as development occurs farther and farther from the city center and congestion increases. These overall results are reasonable for a small MPO growing at a moderate pace.

Figure 14 - 2045 No Build Predicted Level-of-Service

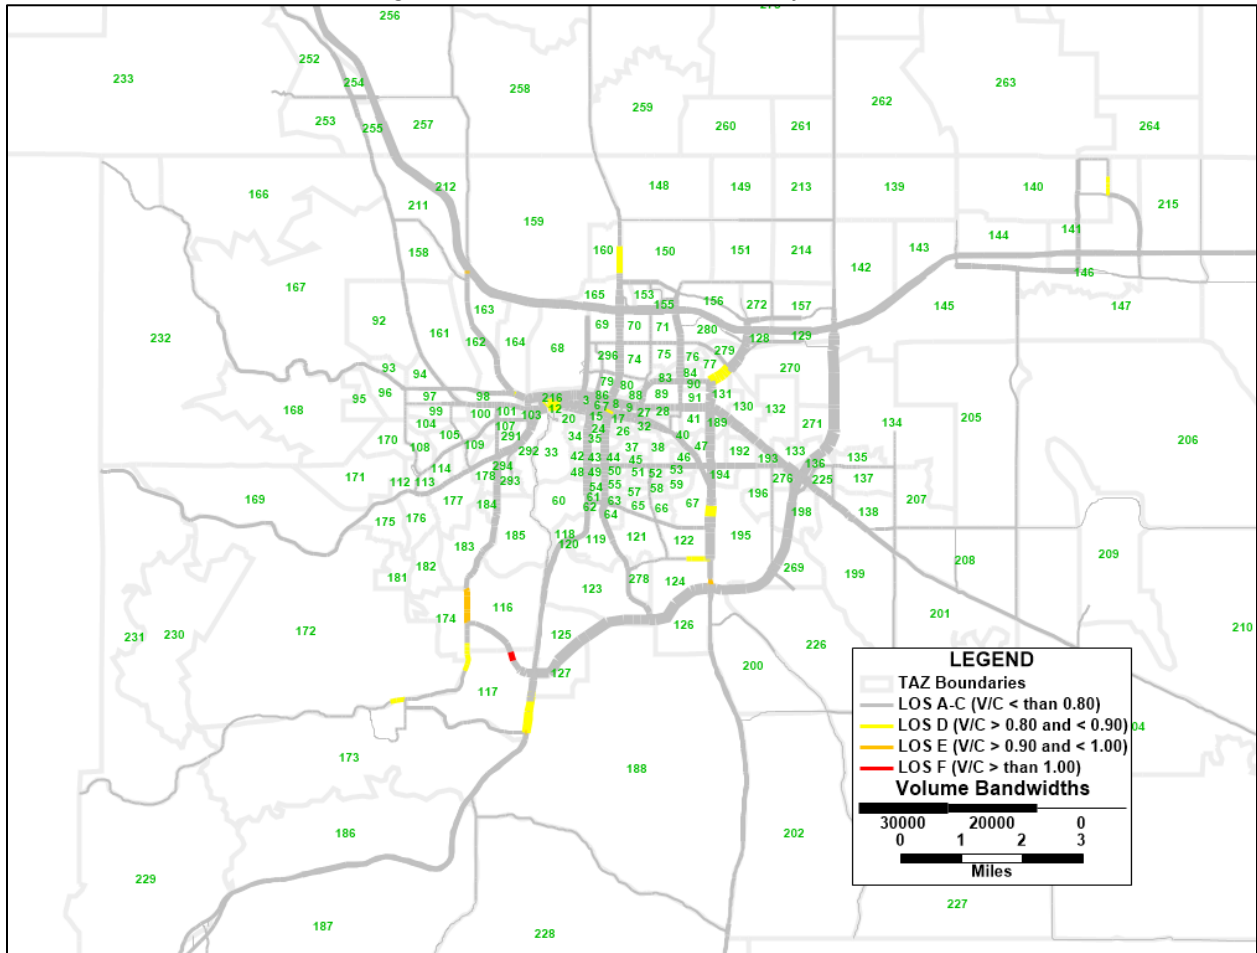

Table 16 - Summary of Growth

	2018	2045**	Percent Growth
Households	49,008	59,456	21.3%
Employment	67,337	97,713	45.1%
Balanced Trips	527,910	649,244	23.0%
VMT	2,239,928	2,874,895	28.3%
VHT	48,225	62,493	29.6%

* No centroid connectors included

**Using existing road network

Conclusions and Next Steps

The major edits, updates, and adjustments that were made to the RCAMPO TDM were discussed in this documentation. The calibration process and validation results were also

discussed in detail. The validation results indicate that the RCAMPO TDM is sufficiently accurate and useable for a forecasting tool.

While many edits were made to the data and model processing, ultimately the experience for the user remains mostly the same with the same graphical user interface and file structure as the previous model. This should allow for an easy transition to using the 2045 model.

While the accuracy and usability of the model is very good, improvements can always be made. Below are two recommendations for future model updates:

1. TAZ Splits – The TAZ size and structure does not always conform to recommended best practice. This can lead to improper loading of traffic onto the road network, making the calibration of certain roadways very difficult. It is recommended that TAZs be split along all modeled roads, and centroids and connectors be added.
2. National Household Travel Survey Add-on – Input parameters have been borrowed from national publications or nearby models. Investing time in processing a NHTS Add-on sample would allow for local inputs as well as provide a valuable data source for calibration. Some of the local inputs that could be estimated using an NHTS Add-on for the current model structure would include:
 - Attraction Trip Rates
 - Production Trip Rates
 - Time of Day Factors
 - Directional Factors
 - Auto Occupancy Factors

Appendix

Table 17 - 2018 Socioeconomic Data

TAZ	Total Households	Retail Employment	Basic Employment	Service Employment	Public Employment

Public Meeting/Open House No. 1 Overview

Meeting Details

Date: Tuesday, October 29, 2019
Time: 4:00 PM to 5:45 PM
Location: Rapid City Council Chambers, City Hall
300 6th Street, Rapid City, SD 57701

Advertisements: Rapid City Journal (10/16/19 and 10/19/19), Native Sun News (10/16/19), project website, MPO website, and Facebook Event post. Additionally, a meeting flyer was emailed to RCAMPO Stakeholders.

The project team hosted a public meeting/open house for the Rapid City Area MPO Metropolitan Transportation Plan (MTP) and Bicycle/Pedestrian Plan Update to present an overview of the project and gather feedback from the public and stakeholders. Approximately 47 attendees signed in for the meeting, including members of the consultant team, City staff, FHWA, and SDDOT staff. It is estimated approximately 15 additional attendees also attended the meeting, however entered through a second entrance after the presentation was underway and did not sign in. An attendance sheet for the public meeting/open house can be found in Appendix A.

A brief presentation was provided to present the details and scope of the project and review the existing analysis completed to date. A copy of the presentation is included in Appendix B. Following the presentation an interactive maps and markers exercise was conducted to gain public feedback on the existing and future transportation system needs. Comments from the public could be provided in multiple forms, including submission of a comment form, notes attached to the maps/markers exercise, email, or via the project website. Written comments received via comment cards, emails, and website submissions are noted in the Written Comments section of the meeting summary. Notes/suggestions provided via the maps/markers exercise have been consolidated and summarized in a table for reference.

In general, discussions focused on transit and bicycle and pedestrian issues/needs. Concerns were also presented regarding the Highway 16/16B/Catron Boulevard intersection, Highway 16/Neck Yoke Road intersection, and intersections near the South Dakota School of Mines campus.

Project Website

www.rapidtrip2045.com

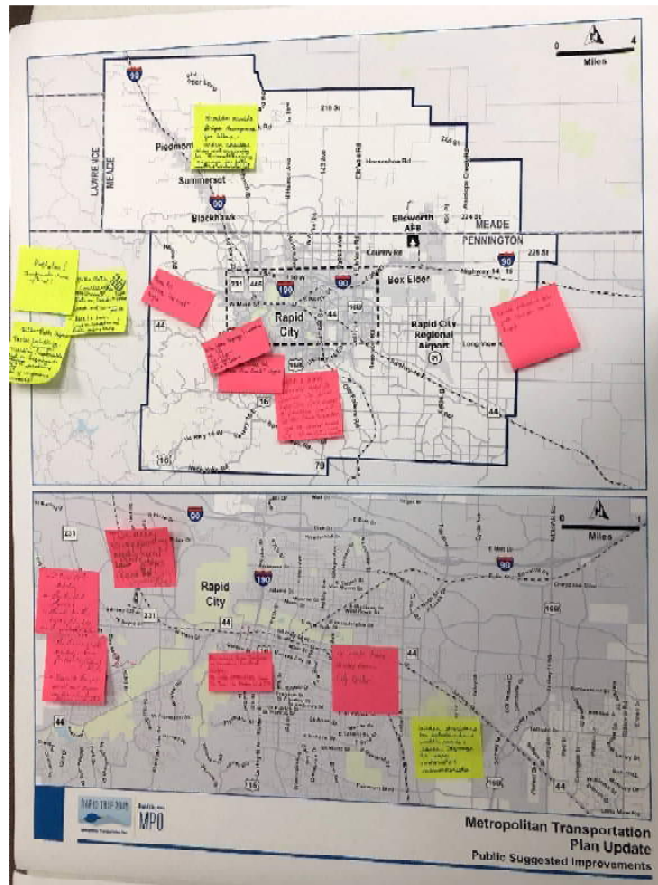

Written Comments

The written comment period associated with Public Meeting/Open House No. 1 began the evening of the meeting/open house and lasted through November 15, 2019. A total of four comment cards were received. Additionally, a type-written comment was received, multiple text messages to the MPO as well as an email submission. Two comments were also received via the project website. The written comments are attached in Appendix C.

In summary, the written comments focused on bicycle/pathway connections, traffic calming near the South Dakota School of Mines campus, improved transit/public transportation routes/stops, and a request to coordinate planning efforts with a proposed project located near Canyon Lake Drive/Soo San Drive.

Project website comments pertained to bike/pedestrian count methods, bike lane signing suggestions, bike/ped crossing suggestions, public meeting displays, and suggestions relating to bus stops and how they tie to pedestrian accessibility.

The maps and markers exercise generated approximately 56 comments/suggestions. A table summary of the comments associated with the maps/markers exercise is also included in Appendix C.

Appendix B – Presentation

PUBLIC MEETING / OPEN HOUSE #1

October 29, 2019

PURPOSE OF THE MEETING

- Involve the public in the planning process
 - Brief Presentation to explain project followed by interactive discussion
- Provide a Project Overview
 - Background
 - Project Scope
 - Project Schedule
- Gather Input and Feedback on Future Transportation Needs for Rapid City Area

PROJECT TEAM

Kip Harrington

RCAMPO Project Manager

Dustin Hamilton, PE

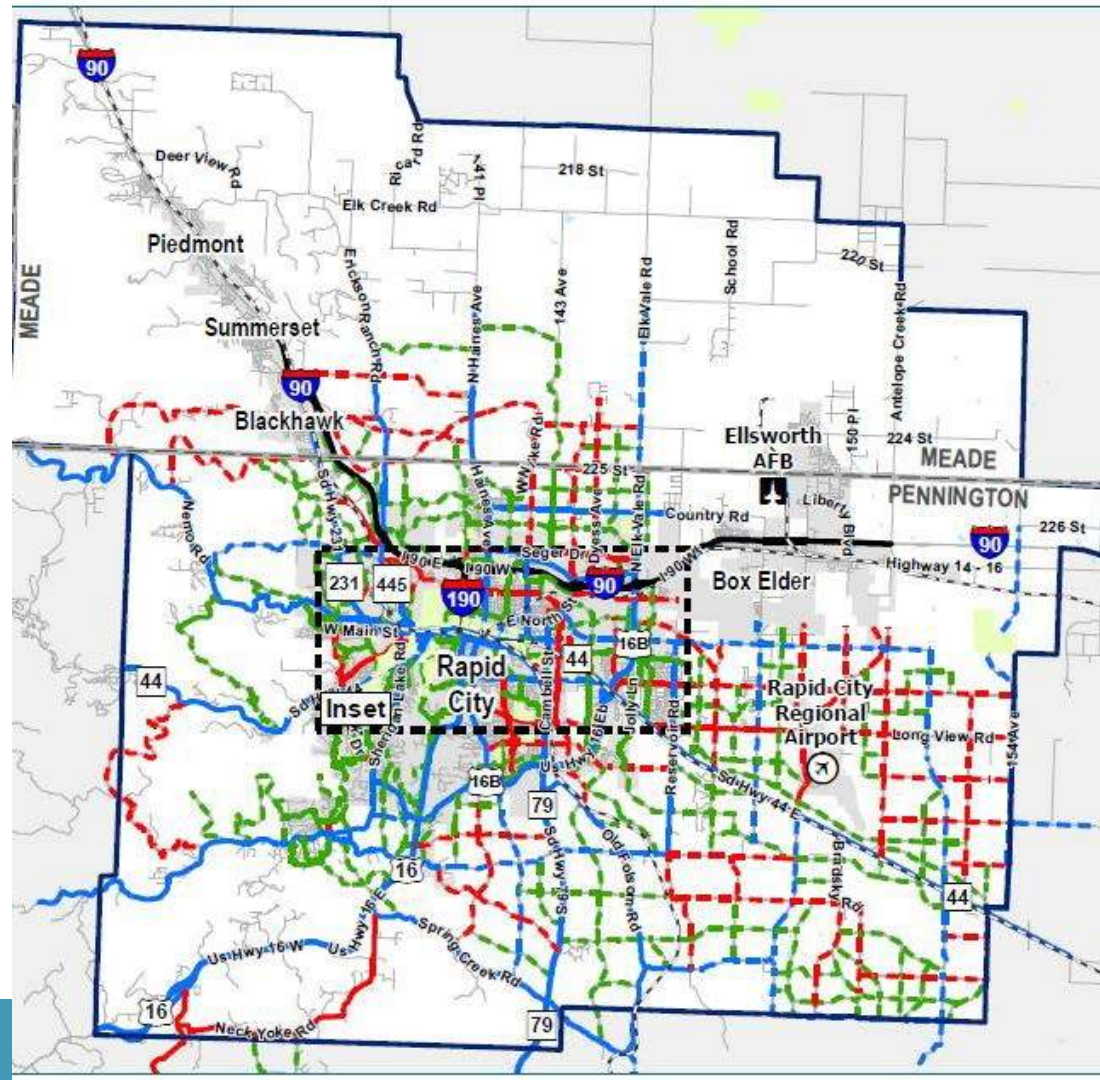

Consultant (HDR) Project Manager

- Rapid City MPO Staff
- SDDOT Staff
- Study Consultant

BACKGROUND INFORMATION

- Metropolitan Transportation Plan (MTP) - Formerly known as Long Range Transportation Plan
- MPOs must update every five years
 - Plan to accomplish transportation goals
- Includes all modes of travel
 - Highway, Bicycle, Pedestrian, Transit, Freight
- Projects must be in the MTP to be included in Transportation Improvement Program (TIP)
- Must be fiscally constrained
- Promotes regional performance measures and targets
- This MTP targets goals, strategies, etc. for the year 2045 planning horizon

PROJECT SCOPE/TASKS

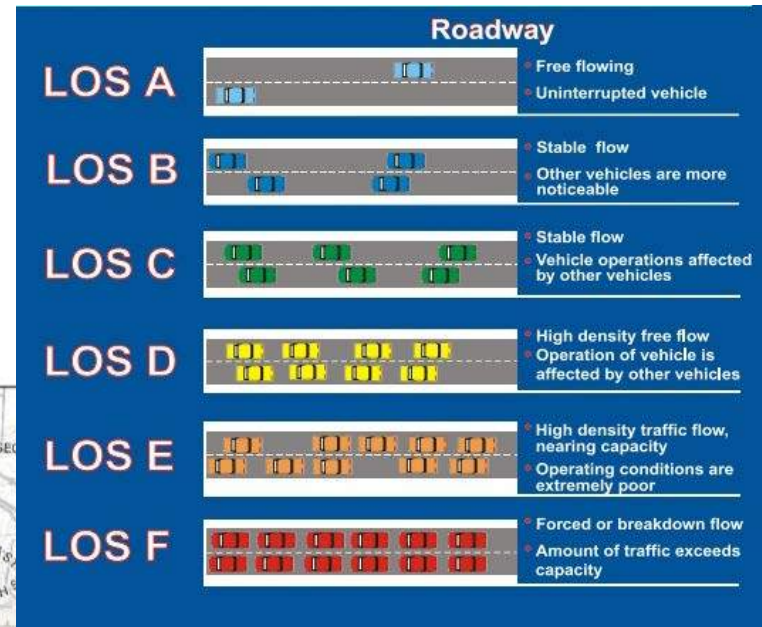

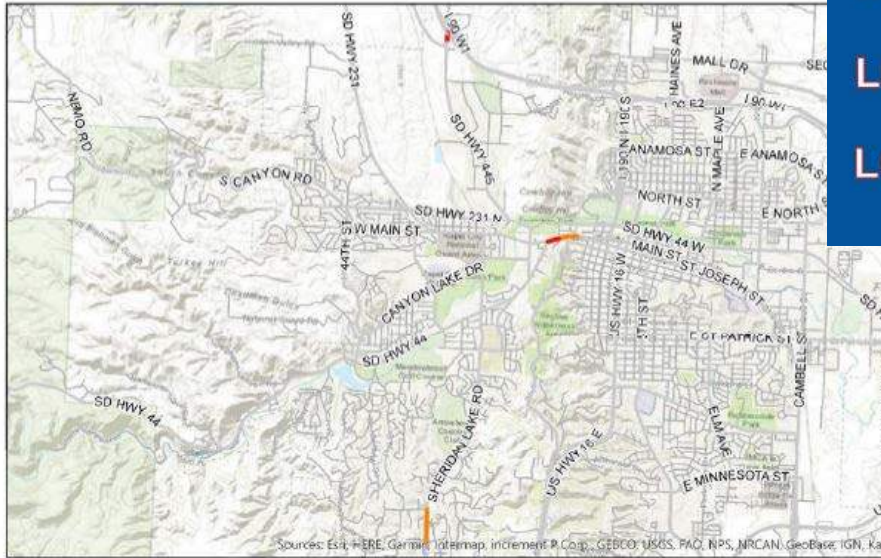

- Travel Demand Model Development and Validation
- Existing System Review (Capacity, Safety, multi-modal)
- Year 2045 Transportation Needs Plan and Fiscally Constrained Plan
- Major Street Plan Update
- Bicycle and Pedestrian Plan Update

MTP – PLANNING LEVEL TRAFFIC OPERATIONS

- Looks at existing segment traffic volumes and compares to capacity of facility

Rapid City MPO
Existing Peak Period
Traffic Operations

Sources: Esri, HERE, Garmin, Intermap, increment P Corp., GEBCO, USGS, FAO, NPS, NRCAN, GeoBase, IGN, Kad

MTP – EXISTING SAFETY ANALYSIS

- Looks at prior five years of crash data (2014 -2018)
 - Identified top frequency and crash rate intersections

MTP – MULTI-MODAL

- Planning Level Review of: transit/bus, air, freight

Table 8: Fixed Route Operating Statistics, Rapid Transit⁵

Measure	2013	2014	2015	2016	2017
Passenger Trips	304,599	287,623	291,206	295,060	348,210
Revenue Hours	20,328	19,490	19,452	19,755	21,043
Revenue Miles	294,439	294,080	290,101	289,699	289,031
Operating Expense	941,516	986,199	1,009,286	988,280	997,384
Passenger Revenue	239,430	251,235	229,542	226,710	174,897

Table 9: Demand Response Service Operating Statistics, Rapid Transit

Measure	2013	2014	2015	2016	2017
Passenger Trips	83,572	79,261	84,594	87,280	87,409
Revenue Hours	25,785	25,750	25,655	22,148	22,056
Revenue Miles	279,165	247,369	268,521	271,425	269,557
Operating Expense	1,061,779	1,112,051	1,115,526	1,107,993	1,042,327
Passenger Revenue	187,160	176,674	192,552	207,756	203,037

Figure 11: Annual Enplanements for the Rapid City Regional Airport, 2007-2018⁷

⁵Seasonal flights to Newark, NJ, Los Angeles, CA, and San Francisco, CA

⁷ Federal Aviation Administration, Air Carrier Activity Information System (ACAIS) data

BIKE/PEDESTRIAN PLAN UPDATE

- Assessment of 2011 Plan Progress
- Level of Traffic Stress (LTS)
- Equity Analysis
- Bike/Ped. Demand Analysis
- Network Planning Methods

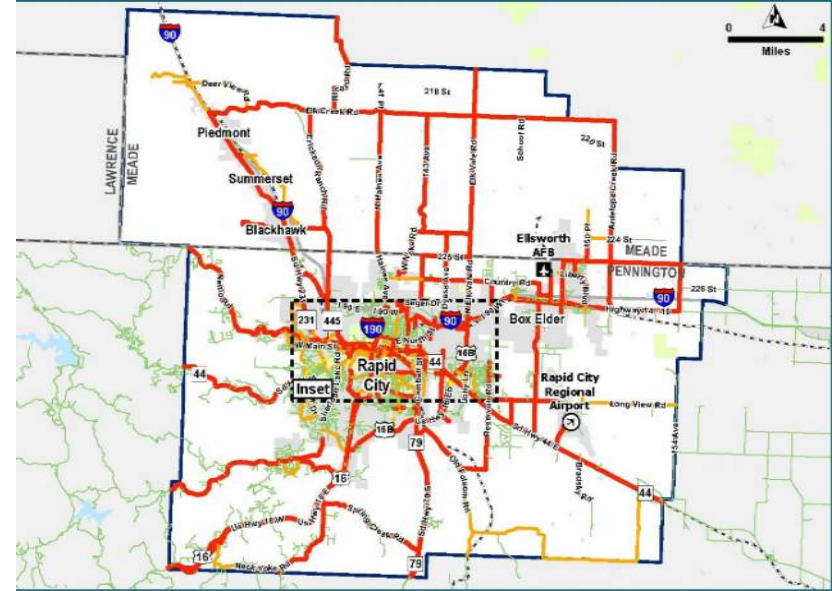

BICYCLE LEVEL OF TRAFFIC STRESS

- 1 All Ages & Abilities
- 2 Interested but Concerned
- 3 Somewhat Confident
- 4 Highly Confident

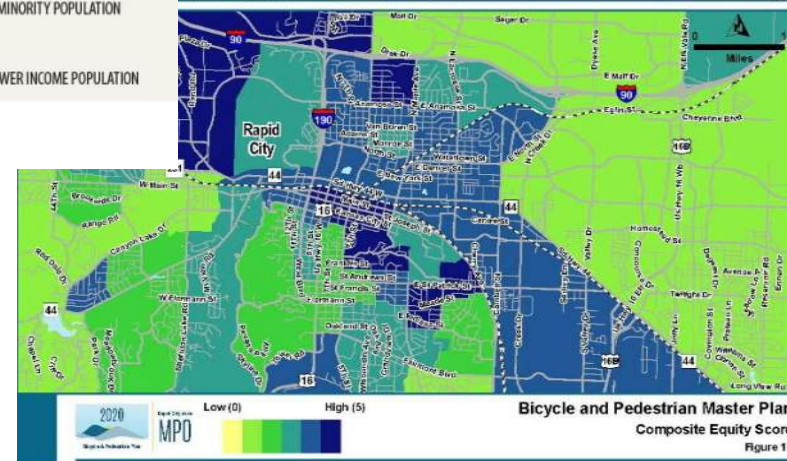

Source: FHWA
Bicycle Facility
Selection Guide

Bicycle and Pedestrian Master Plan
Level of Traffic Stress
Figure 16

EQUITY ANALYSIS

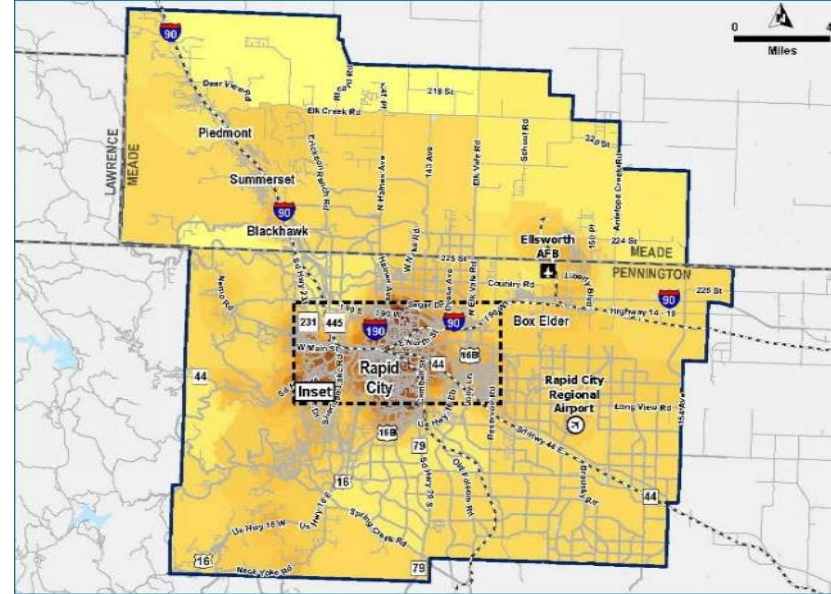

- Spatial Analysis of Key Demographic Patterns
- Compile Resulting Maps to Develop Overall Equity Scores for Areas within MPO
- Use Equity Scores Maps and Existing Facilities to Identify Areas of Low Bicycle Service
- Darker areas on composite map signify locations with concentrated socio-economic indicators

BIKE/PEDESTRIAN DEMAND ANALYSIS

- Three Components:
 - Population + employment density & employment / population ratio
 - Proximity to key destinations & typical walk & bike trip lengths
 - Composite equity score (census block)

Facility Type	Length
Bike Lane	9.68
Bike Path	16.42
Cycle Track	0.28
Shared Lane	1.79
Shoulder Bikeway	18.47
Side Path	26.33
Total Existing Mileage	72.97

BIKE/PEDESTRIAN NETWORK PLANNING

- Review 2011 Plan projects – keep, remove, modify
- FHWA Bicycle Facility Selection Guide
 - Separated facilities at low volumes and speeds
 - Latest industry standard; AASHTO update will also contain same chart
- Identify / close network gaps
- Focus on low-stress facilities and crossings

Source: FHWA
Bicycle Facility
Selection Guide

PROJECT SCHEDULE

Gather information and data, existing network analysis, and model validation

Public Meeting #1

Continued model development, review of Major Street Plan, and development of Fiscally Constrained Needs Plan

Public Meeting #2

Finalize Fiscally Constrained Plan and Draft Report

Public Meeting #3

Present Final Report to MPO Committees

Study Complete

OPEN HOUSE GOALS

Public Participation

- Gather your input and ideas to shape the future transportation network and needs in Rapid City Area for the next 25 years
- Provide your ideas through:
 - Maps/Markers Exercise
 - Comment Sheets
 - Project Website: www.rapidtrip2045.com

THANK YOU!

Your attendance and input is appreciated!

- We look forward to seeing you at the next meeting next spring!

Follow the project at:

Appendix C – Public Comments

PUBLIC COMMENT SHEET

RAPID CITY AREA MPO METROPOLITAN TRANSPORTATION PLAN

Your suggestions and comments are important to the Metropolitan Transportation Plan planning process. Please feel free to provide your comments regarding the overall Metropolitan Transportation and Bike and Pedestrian Plans. Some of the issues under review include the Major Street Plan, improvements and needs for the transportation/bicycle/pedestrian networks, multi-modal systems including transit, air, freight/rail, and other transportation related issues for the year 2045 planning horizon. Please send your written comments by mail, email, website, or fax until November 15, 2019 and address your comments to:

I work for Black Hills Works. We have a location off of Deadwood which houses 80-100 ppl w/ development disabilities. We also have folks working just off of Deadwood Ave. in the Valley. Currently there is no public transportation to either. We are hoping the city change the rules to accommodate these areas.

There is also very limited public transportation on the weekends to folks who work in all areas.

We appreciate all you do!

- 1 thanks to Parks Dept for maintaining bike path
- 2 I like to have under pass so bikes don't cross auto traffic on main path.
- 3 Need plans for a bike loop around downtown & a bike loop around entire city like Sioux Falls has
- 4 Tie a bike path to Centennial trail up HW 44
- 5 Tie bike path to Mickelson Trail from Centennial trail.
- 6 Use rail road bed to Kadoka & Chamberlain for bikes
- 7 Good bike path from Miner to downtown & tie into main bike path.

At Lakota South Dakota CAA at 1844
Lakota Dr. we have a large population of
people walking without transportation. More
access to bus stops on St. Patrick near
Creek will be a great improvement for
people trying to do other. We serve over
5,000 people yearly.

SDSMT just recently completed a ~10 yr master plan. Growth is planned to the west of campus. There is a need to calm traffic past campus to provide a safe environment for students, staff + faculty. Birch + St. Joseph and Steele + Saint Joseph are both extremely dangerous ^{intersections} crossings. We have had an individual hit on a bike at Birch + St. Joseph + multiple close calls.

- We also would like to see ^{better} biking connections from campus to the bike path + through campus.
- Public transportation availability at a more frequent service level is also a need for students
- Our master plan looks at a connection from St. Patrick to St. Joseph. This could also be a biking connection w/ the road.

Transportation Committee Statement

As the Rapid City community continues to grow there is a desperate need for our public transportation to grow with it. It has been multiple years since our public bus routes have been analyzed and extended. For some people, public transportation is the only reliable option for transportation. Could you imagine only being able to work in a certain area of town or visit certain areas of town because the bus doesn't go that way or doesn't stop anywhere near there. Also, imagine finding a really great job that will allow you to provide for you and your family but it's not feasible because you aren't able to drive or can't afford to drive and there isn't a bus stop within a mile or two.

The public transportation system is meant for the public to be able to get around Rapid City but with our current routes it is very limited. Limited routes affect people's way of life, their world of work and it also the businesses that strive to employ them. Some of Rapid City's largest employers are struggling finding quality workers, not because there isn't any workers out there but because there isn't enough workers that have reliable transportation to get to and from work each day. These businesses don't sit on a bus route, but with the size of their business a different location would almost be impossible.

There are several businesses impacted daily by the lack of transportation to the growing east side of town. It has been a staffing challenge for these businesses since there is not an option for employees to take the bus. As the Rapid City community grows and will continue to grow over the next several years, it's in the best interest of the Rapid City community to allow the public transportation to grow with it. There is a lot of cost, we get it and it's not going to be a flawless process, but it is a true need. Based on this need, a group of businesses came together to form a Transportation Committee. Our Committee has been in contact with Lisa Modrick, Ritchie Nordstrom, Kay Urban, Rich Sagen and Megan Gould.

Businesses in our community who joined our Transportation Committee and are impacted by the current bus system:

- Advance Services, Inc. (ASI)
- Fenske Media
- Synchrony Financial
- Open Bible Church
- Rapid City Community Impact
- Chris-Bro Hospitality (Several Locations)
- Granite Automotive
- Black Hills State University Rapid City Campus
- Qwest
- Great Plains Tribal Chairman's Health Board
- RPM and Associates
- My Place Rapid City

- Kids Kastle
- Adecco Staffing
- People Ready
- Black Hills Knowledge Network
- Goodwill of the Great Plains
- Kelly Services
- Liv Hospitality (Several Locations)
- Triple Crown Hotels
- H-S Precision
- Pioneer Credit
- McKie Automotive
- Rushmore Honda
- MDU
- Cambria Hotel and Suites
- Sleep Inn & Suites
- Rapid City Community Work Center
- Little Nest Preschool
- Western South Dakota Community Action
- Comfort Suites
- Rural American Initiative

The data collected from the businesses in 2018 calculated 100 employees/volunteers impacted by the bus system.

Good morning, I live in dark canyon, we have dozens of bike riders and runners daily running in the canyon. It's a great thing! The problem is to get to dark canyon they have to run against traffic on hwy 44 for about 1/4 mile on a dangerous curve. If the city would continue the bike path to the mouth of dark canyon it would be much safer. I see the Stevens cross country team run down there all the time. I cringe knowing they had to run near that hwy when a bike path on the other side of the guardrail could easily be created.

Thanks

Hi,

I want to preface this by saying that I missed the first several minutes of the introduction and some of my concerns may have been addressed already.

My first concern is with the methods used to measure the usage of bike lanes and paths and the conclusions drawn from them. It was my understanding that pedestrian and bike counts would be used as a metric for prioritizing investments new bike lanes and paths. Bike and pedestrian counts are insufficient measures alone. An equivalent to VMT is needed to fully interpret the use of a bike lane or path as well as the reduction in traffic congestion. An individual who commutes 10 miles by bike has the same effective use as 10 individuals who commute 1 mile each. The commuter riding 10 miles would be drastically underestimated by the current methods used to count users/ridership.

There are a number of apps that could be used to estimate bike and pedestrian miles traveled but they would be, at best, proxies.

There are a few corridors that would benefit greatly from small improvements. Simple signage and just a few feet of separated bike lanes would drastically improve safety.

The Jackson blvd bike lane needs to be extending from Mountain View Rd to Main. The road is plenty wide, even with the street parking. The street parking seems underused however should be surveyed to get numbers. The intersection of Jackson and W Main is a total nightmare but would require serious investments to fix. There is also no safe path to cross from W Main to Omaha, Cross st, or W Rapid St. Using Halley Park between Main and St. Joes would require significant improvements in access to the park from the Jackson-W Main intersection.

There seems to be the perception that the bike path is a suitable alternative to separated bike lanes for bike commuting. It's not. The bike path is a great recreational amenity, however, is not a useful means of transportation. The underpasses are either flooded (April - June) or iced over (October - March) which leaves an incredibly short commuting season. Bike lanes on the road are a cost effective means of reducing VMTs and will avoid the troubles of the bike path without increasing maintenance needs.

Final comment; I feel that the decision to use the future road plan maps for the public meetings created unnecessary confusion and distracted from a grounded conversation.

I'd be happy to discuss things further and clarify anything if needed,

Thanks

Garth

I think the bus stops need to be revisited as a part of a pedestrian-oriented, multi-modal system. The physical bus stops themselves are severely lacking. They need to be more than a little sign next to a busy street.

It seems that 'accessibility' to bus transit was measured by the distance to a bus stop and the means to improve access was to increase the number of stops with little consideration for the accessibility or usability of the added stops themselves. The number of bus stops should be condensed and the accessibility of each stop should be improved by making stops a focal point of pedestrian plans.

To: Hamilton, Dustin
Subject: Additional public input

I have received more input via text and facebook messenger as follows:

Shoulders on Spring Creek Road to allow for safer bicycle travel.

I feel that there is an urgent need for a crosswalk at the corner of South Canyon Road and Capital Street. There is heavy pedestrian traffic, especially Pinedale students/families as there is no public transportation beyond N 44th Street. I also want to point out the walking path "shortcut" that connects South Canyon to Wilderness Park. I apologize I didn't raise these concerns at the meeting, but I just saw that this group existed on the news.

An attendee voiced concerns about LOS on Park Drive and thought the LOS identified on the map was incorrect.

Good Morning Dustin (HDR Engineering Inc.),

It was nice meeting you and your staff at the RC Transportation meeting on October 29th. As I mentioned during the meeting, the Great Plains Tribal Chairman's Health Board (GPTCHB) / Oyate Health Center (OHC) along with the Indian Health Service (IHS) are in the final design phase and starting the pre-construction phase this fall of the new health care facility on the old Sioux San Campus. The tentative date of breaking ground for construction is the Spring of 2020, which will affect access to the old Sioux San Campus. We would like to sit down and have a table discussion soon to talk about any adverse effects this may cause for the OHC and IHS patients / staff along with any potential encumbrances for the public and surrounding schools during construction.

We can visit about the logistics during our visit.

Please let me know when we can visit.

Respectfully,

Cecil (CJ) Means II, BS, MHA

Mr. Means –

Thank you so much for participating in the Metropolitan Transportation Plan open house on October 29th. Dustin Hamilton from HDR, Inc. shared your email with me and I wanted to reach out to you in reference to your construction plans. We are excited about the new health care facility on the Sioux San Campus and the opportunity to visit with you and your staff about the plans for that facility.

We have worked with other public agencies in reviewing site plans before the building permit is issued and construction starts. This allows the city's Development Review Team to provide the agency with courtesy review comments from the various disciplines involved with site development. In the past we have found that a courtesy review of the proposed site plan and building plans, in many instances, reduces or eliminates redesign/reconstruction to address such things as handicap accessibility, fire protection, access locations, bus routing/stop accessibility, etc. This would also provide a sort of "laundry list" of items for you and your development team to consider to enhance your facility design and/or layout.

After we have had the opportunity to look at your plans, I can then schedule time for you to visit with the Development Review Team as you had suggested in your email to Dustin.

Additionally, as Kelly mentioned to you at the Open House, early next year we are also starting the Transit Development Plan update. We have already added your contact information to our stakeholder list so that you and your staff can participate in those discussions.

Thank you again Mr. Means for allowing our Development Review Team the opportunity to provide comments on your site plan/building plans. We look forward to visiting with you in the near future.

Public Meeting # 2 Overview

Meeting Details

Date: April 20th – May 1st, 2020

Location: Online Meeting Hosted at www.rapidtrip2045.com

Overview: Because of the rapid on-set of COVID-19 during March of 2020, and the subsequent restrictions placed upon public gatherings, it was required that an on-line meeting format be used for Public Meeting No. 2 instead of in-person format. The on-line meeting and project information was open for review and public comment from Monday April 20 through Friday May 1st, 2020.

Advertisements: Rapid City Journal (4/15/20 and 4/18/20), project website, MPO website, and Facebook Event post. Due to circumstances related to the COVID-19 pandemic, the Native Sun News was unable to publish, despite providing an advertisement to them.

On-line meeting information: The project team hosted an on-line public meeting for the Rapid City Area MPO Metropolitan Transportation Plan (MTP) and Bicycle/Pedestrian Plan Update to present an overview of the project and gather feedback from the public and stakeholders. In general, discussions focused on roadway, transit and bicycle and pedestrian issues/needs.

Attendance: Based on the information received from project website traffic, the following data was collected:

- Page views total: 410
- Unique Page views: 265
- Average time on page: 1:13
- Total users: 246
- Total sessions: 282

Project Website

www.rapidtrip2045.com/onlinemeeting.html

The online public meeting took the attendees through a 14 step process, including:

1. Welcome
2. Rapid Trip 2045 Overview
3. How We Got Here
4. Let's Get Started!
5. System Analysis Results
6. Roadway Major Street Plan
7. Roadway Comment Mapping Activity
8. Roadway Prioritization Activity
9. Bicycle and Pedestrian Prioritization Activity
10. Bicycle and Pedestrian Future System
11. Bicycle and Pedestrian Comment
12. Transit Existing System Analysis
13. Transit Prioritization Activity
14. Next Steps

The mapping activities allowed participants to place suggested improvements or strategies at a desired location where the participant believed there were deficiencies or limitations on the current transportation system. The prioritization activities allowed participants to rank the importance of a specific type of improvement or strategy in addressing system shortfalls. Participants also were able to make general comments with regard to the presented materials or with regard to the project as a whole.

Results

Roadway Comment Mapping Activity

During this activity the respondents were asked to review the treatments/strategies below and using a pin to place where these improvements may be needed within the Rapid City MPO area:

- Medians
- New Traffic Signals
- Traffic Signal Timing Optimization / Coordination
- Turn Lanes
- Grade Separations
- Expressway
- More Travel Lanes (Street Widening)

A total of 30 comments were received. The listing of comments that were received and the corresponding map identifying the location related to the comment can be found in Appendix A.

Roadway Prioritization Activity

While we wish we could implement every single project idea right away, unfortunately it isn't possible for RCAMPO to do so with fiscal constraints. The meeting attendees were asked to prioritize types of projects by using the ranking tool to tell us how important each alternative option is to them to be incorporated in Rapid City. The ranking included from least important to most important and the following items were prioritized:

- More Travel Lanes (Street Widening)
- New Traffic Signals
- Traffic Signal Timing Optimization/Coordination
- Turn Lanes
- Medians
- Expressway
- Grade Separations

The results of these surveys are provided in this section.

Importance of Additional Travel Lanes

Other /General Comments

- o PLEASE put in a handicap accessible walking (wheelchair) bridge here. (Omaha and 6th Street)
- o This intersection is a mess, especially for traffic going in and out of Rushmore Crossing, and needs improved (Eglin and East North Street).

Bike and Pedestrian Prioritization Activity

The existing bicycle and pedestrian network features a variety of facility types, from sharrows and sidewalks, to cycle tracks and shared use paths.

To further enhance the safety and comfort of the future network, the RCAMPO is considering supplementing its network with additional types of bicycle and pedestrian improvement options, such as enhanced crossing treatments and bikeways designed with greater separation from traffic.

To help identify and prioritize bicycle and pedestrian improvements, the meeting attendees were asked to answer a series of questions get a better understanding of how they currently use the bicycle and pedestrian network and the kinds of improvements that are most important. Between 15 and 17 respondents answered the surveys. The results of this activity is detailed in the charts below.

Bicycle & Pedestrian – Comments

We asked the attendees whether we missed anything, or whether they had comments on any proposed improvements. The results of their comments are contained in the Table in Appendix A, along with the map locations.

Bike/Pedestrian Priority Comments are generally summarized as follows.

- Crossing Enhancement – 10 Locations
- Sidepath or trails – 10 Locations
- Sidewalk – 10 locations
- Bikeway – 10 Locations

Transit Prioritization Activity

For the transit priority activity, respondents were asked to rank a series of items

- Increased Hours of Service
- Increased Frequency of Service
- Added or Extended Transit Routes
- Transit to Surrounding Communities

Stay Involved

There were four responses to the question “Would you like to receive future emails about the Rapid City 2045 MTP”? Three persons said yes, and one said no.

Appendix A – Comments and Comment Map

Map ID	Type	Comment
1	Grade Separation	A pedestrian bridge here would be a safer alternative to current crossing.
2	New Traffic Signals	Morning rush timing.
3	New Traffic Signal	Eventual traffic signal for rush times will be needed by 2030.
4	New Traffic Signal	All new signals that are installed need to be accessible Pedestrian Signal for the visually impaired.
5	New Traffic Signal	Traffic lights and pavement improvements would benefit this heavily trafficed intersection.
6	New Traffic Signal	N/A
7	Traffic Signal Timing	When driving westbound on W Main St and turning southbound onto Jackson Blvd, the amber signal duration is far too low. I regularly enter the intersection at a safe speed when the indicator is green, and it is red by the time I leave the intersection.
8	Traffic Signal Timing	When driving northbound on Mountain View Rd and turning westbound onto W Main St, the green indicator is far too short. Often only 1 or 2 cars in a line of 5+ will make it through.
9	Turn Lanes	Left turn lane needed on West bound during morning rush.
10	Turn Lanes	Right turn lane needed East bound morning rush.
11	Crossing Enhancement	Difficult crossing viewing distance/multiple lanes.
12	Crossing Enhancement	Difficult pedestrian/bike crossing - viewing distance/multiple lanes - during events.
13	Crossing Enhancement	Accessable Pedestrian Signals or a handicap accessable bridge anre needed here.
14	Crossing Enhancement	Need a safe way for pedestrians and bicyclists to cross Omaha here.
15	Crossing Enhancement	It would be nice (and presumably safer and less confusing for all involved) if the pedestrian walk signals automatically changed with the green light, rather than having to push the button.
16	Crossing Enhancement	It can be difficult to cross 3 lanes of traffic here and Main Street. Crosswalk markings or pedestrian signage might be helpful.
17	Crossing Enhancement	This crossing is really important for keeping the community connected and providing a safe way for pedestrians and bicyclists to cross Omaha... please keep it!
18	Crossing Enhancement	The pedestrian signals should automatically coordinate with the traffic lights so pedestrians have the right-of-way when the light turns green. There are a lot of pedestrians that cross here and they have to wait if they don't push the button in time.
19	Crossing Enhancement	Need a pedestrian signal and safe way to cross here. Hopefully this is planned as part of the reconstruction project.
20	Crossing Enhancement	A safer pedestrian/bicycle crossing is needed here. I've almost been hit by vehicles multiple times even though I had the walk signal.
21	Bikeway	Would be nice to have a bikeway from Autumn Hills to the Skyline trail system. This would provide a beautiful connection through the woods and views of the blackhills.
22	Sidewalk	Alternate path for bicycles instead of Sheridan Lake Road.
23	Sidewalk	Sidewalk along Hwy 44 should continue to at least Covington or Long View.
24	Bikeway	Cycle track needed on Main St as well for westbound bicycle traffic.
25	Bikeway	It would be ideal to connect all of the existing/proposed bike lanes, etc. to create a more complete bicycle network.
26	Bikeway	It would be ideal to connect all of the existing/proposed bike lanes, etc. to create a more complete bicycle network.
27	Bikeway	It would be ideal to connect all of the existing/proposed bike lanes, etc. to create a more complete bicycle network. Bicycle infrastructure connecting to the YMCA is especially needed.
28	Bikeway	It would be ideal to connect all of the existing/proposed bike lanes, etc. to create a more complete bicycle network.
29	Bikeway	This bike lane should connect to Mt. Rushmore Road at a minimum, but West Blvd would be ideal. It makes no sense to stop it at 5th Street.
30	Sidewalk	Would be good to have a sidewalk connecting the intersection to the bike path here in case the bike path is flooded under the bridge.

ONLINE PUBLIC MEETING COMMENT LOCATIONS

**Appendix C.
Project Prioritization**

Appendix - Project Selection and Prioritization

The approach taken to prioritizing transportation projects throughout the region was multi-modal in nature, and was developed based on feedback received during public engagement activities, the MPO's performance measure requirements, and guidance from the MPO, EPC, and local jurisdictions.

Projects were first categorized by mode—roadway, bicycle and pedestrian, and transit—then scored across the series of metrics shown in **Table 1**. Each project's individual metric scores were summed for an overall score. Based on this overall score, the projects were ranked and prioritized for inclusion in the Fiscally Constrained Plan presented in **Chapter 1`1**.

Insert table and/or graphic of project prioritization metrics

Alternative Screening for Roadway Projects

Roadway projects were further categorized into two different types— System Addition Corridor projects and System Management projects. System Addition Corridor projects are those that construct new roads while System Management projects are those identified as occurring on the existing system. An alternative, points-based screening approach developed to tie the prioritization process to the MTP goals and objectives presented in **Chapter 6** was used to score projects falling under one of these two categories.

1.1.1 System Addition Corridor Project Scoring

System Addition Corridor projects were sourced from the current Major Street Plan, the 2020-2023 TIP, and the 2020-2023 SDDOT STIP. The screening approach for System Addition Corridor projects aimed to prioritize projects that would benefit the future system by:

- Occurring on or adjacent to corridors projected to have high 2045 traffic volumes
- Being located in a designated high-growth area, based on projected socio-economic growth
- Being located in a designated infill area, defined as any area currently served by existing services
- Potential to divert traffic in a corridor projected to have congestion issues
- Limiting impact on open space and/or agricultural lands

Table 11-2 summarizes the approach used for scoring and prioritizing System Addition Corridor projects while **Figure 11-1** shows the location of the System Addition Corridor projects.

1.1.2 System Management Project Scoring

System Management projects were sourced from the Fiscally Constrained Plan of the previous LRTP, comments received from the community during public engagement events, and system issues identified during the existing conditions analysis described in **Chapter 4**. These projects were scored against 10 different criteria for prioritization:

- Improves safety at high crash intersections
- Improves non-motorized safety
- Increases bicycle and pedestrian accessibility
- Creates multi-modal connection to major destinations in the region
- Improves traffic operations where roadway LOS is predicted to be “D” or worse
- Improves passenger reliability on an NHS route exhibiting existing reliability issues
- Enhances freight mobility
- Limits impacts to the built environment
- Benefits access to tourism locations in the region
- Limits impacts to designated Environmental Justice areas

Table 11-3 summarizes the approach used for scoring and prioritizing System Management projects while **Figure 11-2** shows the location of the System Management projects.

Table 1: System Addition Corridors Scoring Criteria

Prioritization Approach	Project Scoring Criteria		
	+2	+1	0
Project's level of 2045 ADT predicted to occur in the corridor	4,000 ADT or more on new streets in area	2,000 to 4,000 ADT on new streets in area	0-2,000 ADT on new streets in area
Project location is within a designated high-growth corridor	Project is within high-growth corridor for jobs / households	Project is within medium-growth corridor for jobs / households	Project is not within or adjacent to high- / or medium-growth corridor
Project is located in designated infill area	Project is within infill area		Project is not within or adjacent to an infill area
Project diverts traffic from a congested corridor	Project diverts traffic from a congested area		Projects does not divert traffic from a congested area
Transportation impacts on open space and agricultural land are limited	The project does not impact open space or agricultural land		Project is located in an open space or agricultural area

Table 1: System Management Scoring Approach

Goal Area	Prioritization Approach	Project Scoring Criteria			
		+2	+1	0	-2
Safety	The project improves safety at a high-crash or high-crash rate intersection	Project improves safety at one or more of the Top 20 Crash Frequency or Crash Rate intersections	Project improves safety at one or more moderate or low crash frequency or crash rate intersections	Project has limited impact on improving safety	Project has potential to negatively impact safety
	The project provides a safer treatment for non-motorized users	Project improves non-motorized safety at one or more of the fatal or serious injury non-motorized crash locations	Project improves non-motorized safety at one or more non-incapacitating non-motorized crash locations	Project has limited impact on improving non-motorized safety	Project has potential to negatively impact non-motorized safety
Multi-Modal Mobility and Accessibility	The project completes a planned bicycle or pedestrian facility that connects to regional bicycle and pedestrian system	Project constructs planned bicycle or pedestrian facility or provides new bicycle and pedestrian connection	Project constructs new bicycle or pedestrian facility	Project does not construct bicycle or pedestrian facility	Project negatively impacts existing bicycle or pedestrian facility, or negatively impacts bicycling and walking in the region
	The project improves traffic mobility or provides a new bicycle, pedestrian, or transit connection to designated growth areas in the region	Project creates mutli-modal connection to a designated growth area		Project does not create a multi-modal connection to a designated growth area	
System Efficiency and Reliability	The project improves traffic operations for a location operating at LOS D or worse in 2045	Project improves operations at a location exhibiting a 2045 LOS D or worse	Project improves traffic operations	Project does not improve traffic operations at a location exhibiting 2045 LOS D or worse	
	The project improves reliability for a corridor identified as having reliability issues	Project improves reliability on a corridor identified as having reliability issues	Project improves reliability on an NHS or Interstate route	Project does not improve reliability	Project negatively impacts reliability on a corridor identified as having reliability issues
	The project improves reliability in a designated freight corridor	Project improves freight reliability on a designated freight corridor		Project does not improve freight reliability on a designated freight route	Project negatively impacts freight reliability on a designated freight route
Economic Prosperity	The project benefits access to a tourism location	Project improves access to a tourism location		Project does not impact a tourism location	
Environmental Sustainability and Resiliency	The project limits impacts on the natural environment	Project limits impacts on wetland, national forest, and other natural areas		Project is located in wetland, national forest, or other natural area	
	The project limits impacts to the built environment and surrounding neighborhoods	Project does not impact property/require additional ROW		Project impacts property/requires additional ROW	
	Project limits impacts on Environmental Justice populations	Project is not within an identified EJ census tract		Project is within an identified EJ census tract

Appendix D. Safety Countermeasures

Rapid City Area MPO Intersection Safety Countermeasures

This document summarizes safety countermeasures available to the Rapid City Area MPO to address traffic safety at the top 25 intersections that exhibited high crash frequencies, in terms of the total number of crashes, and high crash rates per million entering vehicles (MEV) during the years 2014 to 2018.

Based on the intersection crash analysis, it was found that rear end and angle crashes were the most common crash types that occurred during 2014-2018. One strategy to address the high number of rear end crashes is to improve signal head visibility at each intersection that experienced higher proportions of rear end collisions. The recommended safety strategy to reduce the number of angle crashes occurring at intersections is to update left-turn phasing to protected-only.

As stated, the intersection crash analysis identified the top 25 highest crash frequency and crash rate intersections in the MPO region; of these 25 intersections, 8 are located on the Omaha Street corridor. A recommended strategy to reduce vehicular crash occurrences is to improve signal progressions and timings for each intersection along the corridor. This strategy is especially useful for addressing rear end crashes.

Table 1 summarizes the top 25 crash frequency and crash rate intersections in the MPO region and includes the prevalent safety issues facing each intersection. The table also includes potential improvement strategies based on Crash Modification Factors (CMF) Clearinghouse, which is a resource that provides a quantitative estimate of the effectiveness of traffic safety countermeasures as well as a repository of data and resources for CMF users.¹ The CMF strategies recommended for each intersection were based on the types of crashes that occurred. Some of the common CMF strategies that were identified were:

- Improve signal head visibility
- Add 3-inch yellow retroreflective sheeting to signal backplates
- Implement systemic signing and visibility improvements at signalized intersections

¹ Crash Modification Factors Clearinghouse. http://cmfclearinghouse.org/userguide_CMF.cfm

Table 1. Intersection Safety Countermeasures for the Rapid City Area MPO

Intersection	Total Crashes (Rank)	Crash Rate/MEV (Rank)	Prevalent Issues	Potential Strategies
Cambell St & E Omaha St	98 (1)	1.29 (10)	<ul style="list-style-type: none"> • Frequent rear end crashes-northbound and southbound • Frequent angle crashes-eastbound and westbound • May need to add separate signal head for each lane 	<ul style="list-style-type: none"> • Improve signal head visibility • Add 3-inch yellow retroreflective sheeting to signal back plates • Implement systemic signing and visibility improvements at signalized intersections

Appendix E. Environmental Coordination

Rapid City MPO Environmental Scan

Roadway Intersection Environmental Screening Memo

Environmental Review

To analyze potential resources within the Rapid City MPO Boundary (Study Area), a desktop review of available data was analyzed. The environmental resources screened were selected based on the characteristics of the Study Area, as well as input received from area resource agencies. The resources considered are generally consistent with the National Environmental Policy Act (NEPA), its implementing regulations, and Federal Highway Administration (FHWA) guidelines. The following sections summarize resources that are considered red flag environmental resources with separate regulatory drivers. Coordination with these agencies was completed as part of the environmental screening process. Further coordination would be required for each project.

The following sections describe each resource category, along with the approach and limitation for each category. **Please refer to Figure 1: Project Location Map.**

Archaeological and Historical Resources

Section 106 of the National Historic Preservation Act (NHPA) produced a regulatory framework, mandating review of federally funded and permitted projects to determine any potentially adverse impacts to historic resources. The Act requires projects to avoid impacts to National Register of Historic Places (NRHP) and potentially eligible properties, and, if impacts cannot be avoided, to minimize and mitigate impacts.

Approach: A record search using the National Register of Historic Places provided by the U.S. National Park Service was completed by HDR. A Level I cultural literature search was not completed for this memo because of the size of the Study Area. Within the Rapid City MPO Boundary, there is potential for historic and cultural resources. Historic and cultural resources are regulated under Section 106 of the NHPA, and may require consultation between the FHWA, South Dakota Department of Transportation (SDDOT) and the South Dakota State Historic Preservation Office (SHPO).

The record search identified recorded sites that were listed as eligible for the NRHP. The record search resulted in 36 sites located within the Study Area that have been listed as eligible for the NRHP. Shapefiles of these sites were imported into ArcGIS and can be compared against future Project concepts to determine the potential for impacts to cultural resources. Because the NRHP only lists sites that are already listed, a complete file search from SHPO would be required for each project. **Please refer to Figure 2: Cultural Resource Site Map and Figure 3: Cultural Resource District Map.**

Limitations: Early in project planning, the City of Rapid City (City) should work with SDDOT to coordinate its intent to proceed with a particular roadway improvement project, and request that the SDDOT advise the City on the applicability of Section 106, the need to identify consulting parties, and for a Level I cultural resource literature search. When appropriate, the City should anticipate that a Level III identification effort will be conducted, including

identification of archaeological, architectural, and traditional cultural properties subject to the effects of the project. When historic properties are identified, the City should anticipate that avoidance or mitigation of adverse effects to such properties may be required. Impacts to historic properties may be considered protected under Section 4(f)

Wetlands and Waters of the U.S.

Waters of the U.S., including wetlands, are protected under Section 404 of the CWA and Executive Order 11990 Protection of Wetlands. These regulations require avoidance of all wetland impacts or, where avoidance is not practical, minimization to the greatest extent possible. When the objectives of a transportation project cannot be met without adverse impacts to wetlands, wetland mitigation involves the preparation of a wetland mitigation plan detailing how lost wetland functions will be compensated.

Approach: For this Corridor Study, the National Wetlands Inventory (NWI) and aerial imagery were reviewed within the Study Area to determine potential project impacts. There are several wetlands located within the city limits and adjacent to Rapid City. Because the NWI provides an estimate of wetlands based on soil type and aerial photography, these boundaries are utilized as guidance for identifying wetland areas and delineation would be required for each project.

Please refer to Figure 4: NWI Map.

Limitations: Wetlands and other waters of the U.S. will need to be considered for each project as the City wants to move the project from planning stages to construction. Early in project planning, an onsite wetland delineation of the Study Area is recommended to confirm the boundaries of wetlands and other waters of the U.S. within the Study Area and to coordinate with USACE to determine jurisdiction.

Wildlife/Threatened and Endangered Species

Various federal laws have been established to protect wildlife, including: the Endangered Species Act (ESA); the Migratory Bird Treaty Act (MBTA); and the Bald and Golden Eagle Protection Act (BGPA).

Approach: Fish and wildlife species listed under the ESA would need to be considered for each project. The list of species identified within the Study Area was identified from U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) system. Two species designated as endangered and two species designated as threatened exist within the Study Area. These include the whooping crane (endangered), least tern (endangered), northern long-eared bat (threatened) and Rufa red knot (threatened). According to IPaC, no critical habitat exists within the Study Area.

To identify the potential for threatened and endangered species to be present in an area, aerial imagery was used to identify potential habitat located within the Study Area. The Study Area is highly developed with commercial, industrial, and residential activities. Much of the area is developed and habitat for the least tern was not identified inside of the Study Area. The Study Area is partially located inside of the whooping crane migratory route. Additionally, the northern long-eared bat is a federally listed threatened species with a range encompassing South Dakota; future environmental evaluations should consider the impacts to northern long-eared bat as projects are studied further. **Please see Figure 5: Whooping Crane Migration Route**

Limitations: Consultation with USFWS would be required to determine which ESA-listed species have the potential to occur within each Study Area. Coordination with SD Game, Fish, and Parks would be recommended regarding impacts to state-listed sensitive species. Additionally, coordination with USFWS would be required for any project on USFWS property.

Parks and Recreation Properties

The Department of Transportation Act (DOT Act) of 1966 included a special provision – Section 4(f) – which is intended to protect publicly owned parks, recreational areas, wildlife and waterfowl refuges, or public and private historical sites. Similarly, Section 6(f) protects state and locally sponsored projects that were funded as part of the Land and Water Conservation Fund (LWCF).

Approach: The LWCF website was reviewed to identify the use of Section 6(f) grants in the Study Area. Publicly owned parks and recreation areas are present within the Study Area. Public spaces within the City of Rapid City that have received LWCF grant money are subject to Section 6(f) regulations. Additionally, if the projects proposed in these alternatives receive Federal Highway Administration (FHWA) funds, the projects will be subject to Section 4(f) consultation.

Limitations: There have been several grants received at a variety of the city parks. Areas within the Project corridor that could impact City parks or recreational trails would need to be further reviewed to determine potential for a Section 6(f) impact. Due to the use of LWCF grants, it is recommended that consultation occur with Rapid City Parks and Recreation or any other necessary entity early with each project to determine the location of improvements to determine whether the park area impacted will be subject to Section 6(f) or Section 4(f) regulations. **Please see Figure 6: Park Location Map, Figure 7: Bike Paths Map, and Figure 8: Black Hills National Forest Map.**

Floodplain and Floodways

Floodplains are the lands on either side of a watercourse that are inundated when a channel exceeds its capacity. The National Flood Insurance Program (NFIP) encourages state and local governments to adopt sound floodplain management programs. The City has been a participating member of the Federal Emergency Management Agency (FEMA) Flood Insurance Program since 1998. The current Pennington County Flood Insurance Study (FIS) that includes the City is dated June 3, 2013.

The main floodways and floodplains within the Study Area are those associated with Rapid Creek, Box Elder Creek, Spring Creek, and Elk Creek and their tributaries.

Approach: FEMA flood maps were evaluated and floodplain and floodways were determined. **Please see Figure 9: Floodplain Map.**

Limitations: If any projects would involve areas associated with FEMA or FIS, a floodplain permit may be required if the floodplain would be encroached upon. A Floodplain Development Application would be completed for the project and the City would obtain a Floodplain Development Permit.

Regulated/Hazardous Materials

Hazardous materials include substances or materials that EPA has determined to be capable of posing an unreasonable risk to health, safety, or property. Hazardous materials may exist within

the Study Area at facilities that generate, store, or dispose of these substances, or at locations of past releases of these substances. Examples of hazardous materials include asbestos, lead based paint, heavy metals, dry-cleaning solvents, and petroleum hydrocarbons (for example, gasoline and diesel fuels), all of which could be harmful to human health and the environment.

Approach: The SD Department of National Resources (SDDENR) Environmental Events Database website was reviewed for the Project Area to identify any areas that could be of concern for project such as contaminated soils, hazardous waste site, and buried tanks concepts. **Please see Figure 10: SDDENR Recorded Spills Map.**

Limitations: Information for hazardous material should be reviewed at the time of a proposed project to identify any potential new hazards that may have occurred from the time of the Study to a project.

Environmental Justice Populations

Environmental Justice is the approach to identifying and addressing potential disproportionately high and adverse effects of transportation programs, policies, and activities on minority populations and low-income populations. The goal is to achieve an equitable distribution of benefits and burdens.

In 1994, President Clinton issued Executive Order 12898, directing federal agencies, to the greatest extent practicable, to identify and address disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations. In 1997, the Department of Transportation (U.S. DOT) issued an Order to address Environmental Justice in minority populations and low-income populations to summarize and expand upon the requirements of Executive Order 12898 on Environmental Justice. This section describes how Environmental Justice populations were identified for Rapid City MPO.

Methodology

Minority Populations

FHWA defines a minority population as any readily identifiable groups of minority persons who live in geographic proximity, and if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed FHWA program, policy, or activity. FHWA defines a minority as:¹

- **Black:** a person having origins in any of the black racial groups of Africa.
- **Hispanic or Latino:** a person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race.
- **Asian American:** a person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent.

¹ FHWA Order 6640.23A

- ***American Indian and Alaskan Native***: a person having origins in any of the original people of North America, South America (including Central America), and who maintains cultural identification through tribal affiliation or community recognition.
- ***Native Hawaiian and Other Pacific Islander***: a person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

Reference Population

A reference population is necessary in order to determine whether potential project-related adverse impacts are disproportionately borne by one or more minority or low-income populations compared to the greater area. USDOT guidance for Environmental Justice (EJ) analysis and documentation² states:

“Potential environmental justice impacts are detected by locating minority populations and low-income populations in and near the project area, calculating their percentage in the area relative to a reference population, and determining whether there will be adverse impacts to them.”

In this analysis, the Study Area population is compared to a reference population within the Rapid City U.S. Census Core Based Statistical Area (CBSA). And for a wider view, additional statistics listed compare the Study Area with Pennington County, Meade County and the state of South Dakota populations.

Minority Populations

Per FHWA guidance, a readily identifiable group of minority persons was identified as any census tract with a “substantial” minority populations: where the percentage of minority population was at least one standard deviation (35%) higher than the average percentage of the minority population within the reference population (Rapid City CBSA). The minority population of the Rapid City CBSA is 20.9% of the total population; the threshold value used to determine a “substantial” minority population is 28.2% (20.9% multiplied by 1.35). Consequently, any census tract within the Study Area where the percentage of minorities is greater than 28.2% was identified as having a minority population.

Low-Income Populations

FHWA defines a low-income population as any readily identifiable group of low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed FHWA program, policy, or activity. FHWA defines low-income as a person whose median household income is at or below the Department of Health and Human Services (DHSS) poverty guidelines. The best approximation for the number of people below the DHHS poverty guidelines in a particular area is the number of persons below the Census Bureau poverty thresholds in that area.

Similar to the minority population, a readily identifiable group of low-income population was identified as any census tract with a “substantial” low-income population: where

² U.S. DOT Environmental Justice in NEPA Documentation Process (American FactFinder, Step-by-Step Guide). April 3, 2012. Available at: https://secure.in.gov/indot/files/ES_EnvironmentalJusticeGuidance_2012.pdf

the percentage of low-income population was at least one standard deviation (35%) higher than the average percentage of the low-income population in the reference population. The low-income population (or percent poverty) of the reference population (Rapid City core based statistical area) is 24.8% of the total population; the threshold value used to determine a “substantial” low-income population is 33.5%. Consequently, any Census block group within the Study Area where the percentage of low-income persons is greater than 33.5% was identified as having a low-income population.

Data Sources

Esri 2019 U.S. demographic data was used to identify minority and low-income populations in the Study Area. Esri Demographics offers current-year updates and five-year projections of population, race and Hispanic origin, household income, and more. Annual demographic updates incorporate both traditional and new data sources to remain current. The estimate combine the best data from the U.S. Census Bureau’s American Community Survey with other sources to enable better measures of change than are possible with ACS data alone.

Identified Environmental Justice Populations

Based on the methodology described above, the Environmental Justice populations defined for the Rapid City MPO area are shown in **Figure 11: Environmental Justice Population Map**.

The Rapid City Area Metropolitan Planning Organization (MPO) is preparing a Long Range Transportation Plan (LRTP) for improvements to various travel modes in the Rapid City MPO region. **Please see Figure 1: Project Location.**

To verify that all social, economic, historical, and environmental effects are considered in the development of this plan we are soliciting your views and comments on the proposed LRTP as part of preliminary environmental review being completed for the plan.

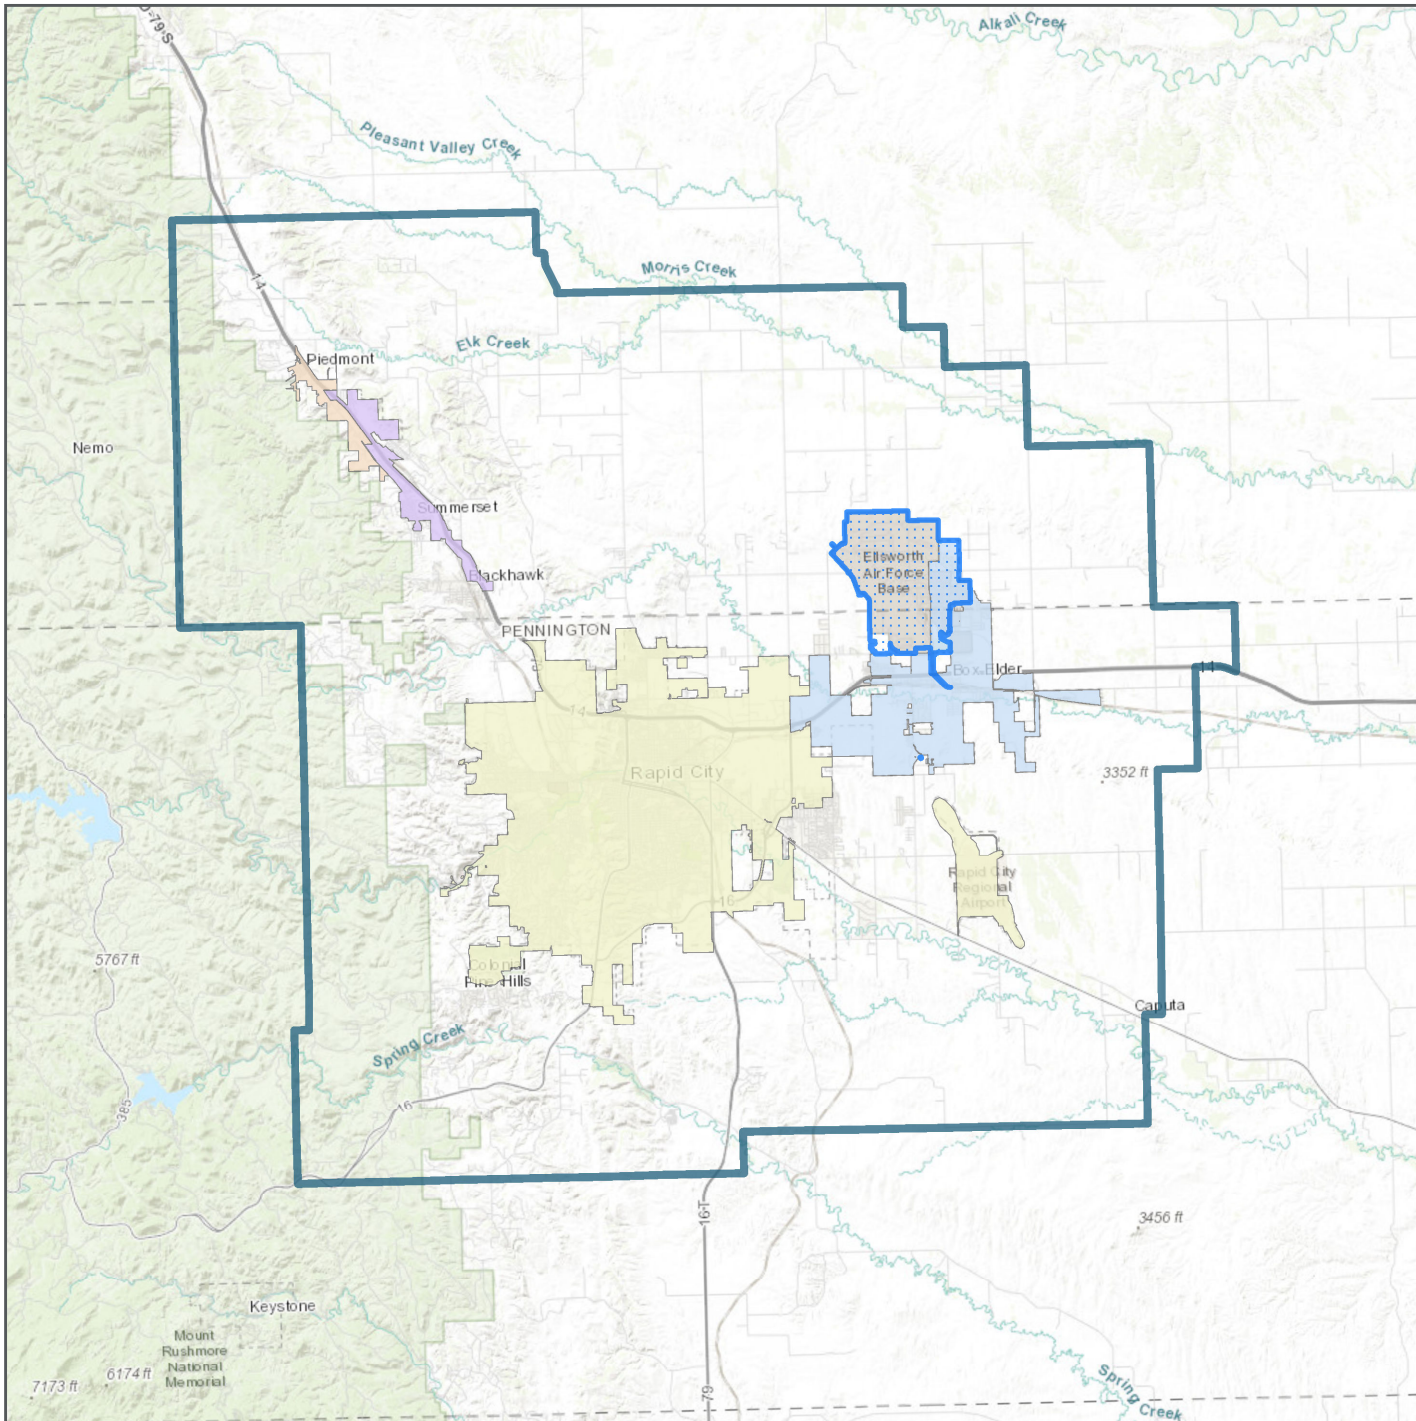

Your suggestions and comments are important to the Rapid City MPO LRTP. Please feel free to provide comments and concerns your agency may have with respect to environmental, social, historical or economic considerations during development of the plan. Some of the issues under review are land uses, road network, and bike path locations.

It is requested that any comments or information be forwarded to our office on or before December 7, 2019. If no reply is received by this date, it will be assumed that you have no further comment on this project.

If further information is desired regarding the proposed LRTP, please visit <http://rapidcityareampo.org/documents/participation-plan> or contact Dustin Hamilton at 605-791-6103 in Rapid City, SD.

Dustin Hamilton

IN REPLY REFER TO:
Rapid City
Metropolitan
Transportation Plan

January 23, 2020

Mr. Dustin Hamilton
HDR
703 Main Street, Suite 200
Rapid City, South Dakota, 57701

Dear Mr. Hamilton:

This letter is in response to your request dated December 30, 2019 for environmental comments regarding updates to the Rapid City Metropolitan Transportation Plan. The Rapid City Metropolitan Planning Organization (MPO) is preparing an update to the Metropolitan Transportation Plan for improvements to various travel modes within the Rapid City MPO boundary.

According to the National Wetlands Inventory, (available online at www.fws.gov/wetlands/) wetlands exist within the project boundary. If a project may impact wetlands or other important fish and wildlife habitats, the U.S. Fish and Wildlife Service (Service), in accordance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321-4347) and other environmental laws and rules, recommends complete avoidance of these areas, if possible, then minimization of any adverse impacts, and finally replacement of any lost acres, in that order. Alternatives should be examined and the least damaging practical alternative selected. If wetland impacts are unavoidable, a mitigation plan addressing the number and types of wetland acres to be impacted, and the methods of replacement should be prepared and submitted to the resource agencies for review.

The following recommendations should be implemented in the construction plans for the placement of any service lines that cross streams and wetlands in order to minimize potential environmental impacts:

1. Crossing of wetland basins should be done when dry conditions exist.
2. Stream bottoms and wetlands impacted by constructions activities should be restored to pre-project elevations. In cases where wetland basins to be crossed are formed because of impermeable soils, the soil area should be packed to reestablish the impermeability of the basin's floor.
3. Stream crossings should not be undertaken during fish spawning period. Most spawning occurs in April, May and June.

4. Streams should be crossed perpendicular to flow.
5. Removal of vegetation and soil should be accomplished in a manner to reduce soil erosion and to disturb as little vegetation as possible.
6. Grading operations and reseedling of native species should begin immediately following trench backfilling.

Work requiring the alteration or disturbance of wetlands or streams may require a permit from the U.S. Army Corps of Engineers (Corps) according to the regulations set forth in section 10 of The Rivers and Harbors Act, or section 404 of The Clean Water Act. You may contact the Corps Regulatory Office at 28563 Powerhouse Rd, Rm 118, Pierre, SD 57501, Telephone (605) 224-8531.

In accordance with section 7(c) of the Endangered Species Act (ESA) (87 Stat. 884, as amended; 16 U.S.C. 1531 *et seq.*), we have determined that the following federally listed species may occur in the project area (this list is considered valid for 90 days):

<u>Species</u>	<u>Status</u>	<u>Expected Occurrence</u>
Least Tern (<i>Sterna antillarum</i>)	Endangered	Migration or nesting
Northern Long-eared Bat (<i>Myotis septentrionalis</i>)	Threatened	Summer resident, seasonal migrant, known winter resident in Black Hills
Rufa Red Knot (<i>Calidris canutus rufa</i>)	Threatened	Rare seasonal migrant
Whooping Crane (<i>Grus americana</i>)	Endangered	Migration

Least terns and piping plovers use sparsely vegetated interchannel sandbars, islands, and shorelines for nesting, foraging and brood-rearing. They are sensitive to human disturbances, which can limit reproduction. Surveys for nesting piping plovers and least terns should be performed prior to any construction, and no construction should take place within 1/4 mile of any known piping plover or least tern nest. The birds typically breed in South Dakota between the dates of May 1 and August 15.

Whooping cranes migrate through South Dakota on their way to northern breeding grounds and southern wintering areas. They occupy numerous habitats such as cropland and pastures; wet meadows; shallow marshes; shallow portions of rivers, lakes, reservoirs, and stock ponds; and both freshwater and alkaline basins for feeding and loafing. Overnight roosting sites frequently require shallow water in which to stand and rest. Should construction occur during spring or fall migration, the potential for disturbances to whooping cranes exists; particularly because your

project involves construction in counties adjacent to major river systems. Disturbance (flushing the birds) stresses them at critical times of the year. We recommend remaining vigilant for these birds. There is little that can be done to reduce disturbance besides ceasing construction at sites where the birds have been observed. The birds normally do not stay in any one area for long during migration. Any whooping crane sightings should be reported to this office.

The northern long-eared bat is a medium-sized brown bat listed as threatened under the Endangered Species Act. Northern long-eared bats are known to be present in South Dakota year-round, primarily roosting singly or in colonies underneath bark, in cavities or in crevices of both live and dead trees in the summer. Some hibernacula have been documented in caves/mines in the Black Hills. The species has been documented in other forested areas in the state during the summer months and along the Missouri River during migration. Summer survey guidelines for this species are identical for those established for the Indiana Bat (available online at: <https://www.fws.gov/midwest/endangered/mammals/inba/inbasummersurveyguidance.html>). White nose syndrome - a fungus affecting hibernating bats - is considered a significant threat to this species, but individuals may be harmed by other activities such as modifications to hibernacula, timber harvest, human disturbance, and collisions with wind turbines.

The rufa red knot is a robin-sized shorebird listed as threatened under the Endangered Species Act (see: < <http://www.gpo.gov/fdsys/pkg/FR-2014-12-11/pdf/2014-28338.pdf>> for more information). The red knot migrates annually between its breeding grounds in the Canadian Arctic and several wintering regions, including the Southeast United States, the Northeast Gulf of Mexico, northern Brazil, and Tierra del Fuego at the southern tip of South America. Although it is primarily a coastal species, small numbers of rufa red knots are reported annually across the interior United States (i.e., greater than 25 miles from the Gulf or Atlantic Coasts) during spring and fall migration. These reported sightings are concentrated along the Great Lakes, but multiple reports have been made from nearly every interior State, including South Dakota. The red knot likely uses South Dakota habitats similar to those of the least tern and piping plover. The species does not breed in this state.

If the Federal action agency or their designated representative determines that the project will have "no effect" on federally listed species, Service concurrence is not necessary per section 7 of the ESA. If the Federal action agency or their designated representative determines that this project "may adversely affect" listed species in South Dakota, it should request formal consultation from this office. If a "may affect - not likely to adversely affect" determination is made for this project, it should be submitted to this office for concurrence. For more information regarding Federal action agency responsibilities as related to section 7 of the ESA, please refer to the Service's Endangered Species Act Consultation Handbook, available online at: <http://www.fws.gov/endangered/consultations/index.html>.

If changes are made in the project plans or operating criteria, or if additional information becomes available, the Service should be informed so that the above determinations can be reconsidered.

Mr. Dustin Hamilton

4

The Service appreciates the opportunity to provide comments. If you have any questions on these comments, please contact Dylan Turner of this office at (605) 224-8693, Extension 233.

Sincerely,

Scott Larson

DEPARTMENT OF THE ARMY
CORPS OF ENGINEERS, OMAHA DISTRICT
1616 CAPITOL AVENUE
OMAHA NE 68102-4901

January 24, 2020

Planning, Programs, and Project Management Division

Mr. Dustin Hamilton
HDR
703 Main Street, Suite 200
Rapid City, South Dakota 57701

Dear Mr. Hamilton:

The U.S. Army Corps of Engineers, Omaha District (Corps) has reviewed your letter dated December 30, 2019 (received January 7, 2020) regarding the environmental review of the proposed Metropolitan Transportation Plan update, in Rapid City, South Dakota. It is understood that the proposed update would include improvements to various travel modes within the Rapid City Area Metropolitan Planning Organization boundary. We offer the following comments for your consideration:

Your plans should be coordinated with the state water quality office that has jurisdiction within the area where the project is located to ensure compliance with federal and state water quality standards and regulations mandated by the Clean Water Act and administered by the U.S. Environmental Protection Agency. Please coordinate with the South Dakota Department of Environment & Natural Resources concerning state water quality programs.

If you have not already done so, it is recommended you consult with the U.S. Fish and Wildlife Service and the South Dakota Department of Game, Fish and Parks regarding fish and wildlife resources. In addition, the South Dakota State Historic Preservation Office should be contacted for information and recommendations on potential cultural resources in the project area.

It should be ensured that the proposed project is in compliance with floodplain management criteria of Meade and Pennington Counties and the State of South Dakota. As a minimum, the design should ensure that the one percent annual chance floodwater surface elevation of any stream affected that has a designated floodway, is not increased relative to pre-project conditions. If a designated floodway has not been identified then the design should ensure that the one percent annual chance floodwater surface elevation is not increased by more than one-foot relative to pre-project conditions. It is desirable, however, that water surface elevations either remain the same or decrease as a result of this project.

Since the proposed project does not appear to be located within Corps owned or operated lands, your plans should be submitted to the local floodplain administrator for review and approval prior to construction. It should be ensured that the proposed project is in compliance with the floodplain management criteria of Meade and Pennington Counties and the State of South Dakota. In addition, please coordinate with the following floodplain management office:

South Dakota
South Dakota Division of Emergency Management
Attention: Mr. Marc Macy
118 W. Capitol Avenue
Pierre, South Dakota 57501
Telephone: 605-773-3231
Fax: 605-773-3580
Email: marc.macy@state.sd.us

Any proposed placement of dredged or fill material into waters of the United States (including jurisdictional wetlands) requires Department of the Army authorization under Section 404 of the Clean Water Act. You can visit the Omaha District's Regulatory website for permit applications and related information. Please review the information on the provided website (<http://www.nwo.usace.army.mil/Missions/RegulatoryProgram.aspx>) to determine if this project requires a 404 permit. For a detailed review of the permit requirements, preliminary and final project plans should be sent to:

U.S. Army Corps of Engineers
Pierre Regulatory Office
Attention: Mr. Steve Naylor, CENWO-ODR-SD
28563 Powerhouse Road, Room 120
Pierre, South Dakota 57501

If you have any questions, please contact Ms. Shelly McPherron of my staff at (402) 995-2507 or michelle.m.mcpherron@usace.army.mil and reference PD# 8258 in the subject line.

Sincerely,

Eric A. Laux, PMP
Chief, Environmental & Cultural Resources

Appendix F. Current Transportation Improvement Program

Rapid City Area Transportation Improvement Program

(Fiscal Years 2020-2023)

**Final
August 2019**

Prepared By:

The Cities of Rapid City, Box Elder, Summerset and Piedmont,
Meade County and Pennington County,
Rapid City Regional Airport,
Ellsworth Air Force Base
Rapid City Area School District,
Rapid City Long Range Planning Division, and the
South Dakota Department of Transportation

In Cooperation With:

RAPID CITY AREA TRANSPORTATION IMPROVEMENTS PROGRAM

(Fiscal Years 2020 - 2023)

- ABBREVIATIONS USED IN THIS DOCUMENT -

AC	Asphalt Concrete
ADA	Americans with Disabilities Act of 1990. Mandates changes in building codes, transportation, and hiring practices to prevent discrimination against persons with disabilities. This act affects all existing and new public places, conveyances, and employers. The significance of ADA in transportation will be most obvious in transit operations, capital improvements, and hiring practices.
AIP	Airport Improvement Program
C & G	Curb and Gutter
CIP	Capital Improvement Plan
CY	Calendar Year
DOT	United States Department of Transportation
FAST Act	Fixing America's Surface Transportation Act
FHWA	Federal Highway Administration
FTA	Federal Transit Administration
FY	Fiscal Year
IM	Relates to either the interstate maintenance project funding category or the state system structure funding category (Resurfacing, Restoration and Rehabilitation) provided by the DOT under the terms of the ISTEA of 1991.
MPO	Metropolitan Planning Organization
PCC	Portland Cement Concrete
PE	Preliminary Engineering
PL	Metropolitan Planning Funds. Highway Trust Funds which have been set aside for transportation planning activities in Urbanized Areas. Funding is on an 81.95% - 18.05% federal/local basis.
RCATPP	Rapid City Area Transportation Planning Process. The local cooperative transportation planning program.

ABBREVIATIONS USED IN THIS DOCUMENT (Cont.)

RCP&E	Rapid City, Pierre, and Eastern Railroad
RCRA	Rapid City Regional Airport
ROW	Right-Of-Way
SEC 5307	Federal Program for capital improvements, i.e. terminals, shelters, mechanical equipment other than buses, computers, office equipment, etc. These funds, formerly known as Section 9 funds, have been available since FY 1984 through the Urban Mass Transportation Act of 1964 as amended by the Federal Transit Act of 1991. They provide resources for planning, capital and operating assistance. The match on planning and capital is 80% federal and 20% local; while the operating subsidy is 50% federal and 50% local.
SEC 5310	These funds, formerly known as Section 16 funds, are available through the Urban Mass Transportation Act of 1964 as amended. This authorizes capital grants to non-profit organizations to assist in providing transportation for the elderly and the handicapped. FTA provides 80% of the costs for equipment, and the 20% match must come from other than federal funds.
SEC 5339	A formula program that provides funding for capital projects to replace, rehabilitate, and purchase buses and bus-related equipment, and to construct bus-related facilities. This program was established under Moving Ahead for Progress in the 21st Century (MAP-21), replacing the previous Section 5309 discretionary program established under the Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU).
SDDOT	South Dakota Department of Transportation
STIP	State Transportation Improvement Program
STP	Surface Transportation Program
TIP	Transportation Improvement Program

METROPOLITAN TRANSPORTATION PLANNING PROCESS SELF-CERTIFICATION STATEMENT

In accordance with 23 CFR 450.336, the **South Dakota Department of Transportation** and the **Rapid City Area Metropolitan Planning Organization** for the **Rapid City, South Dakota urbanized area** hereby certify that the transportation planning process is addressing the major issues in the metropolitan planning area and is being conducted in accordance with all applicable requirements of:

- (1) 23 U.S.C. 134, 49 U.S.C. 5303, and this subpart;
- (2) Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d-1) and 49 CFR part 21;
- (3) 49 U.S.C. 5332, prohibiting discrimination on the basis of race, color, creed, national origin, sex, or age in employment or business opportunity;
- (4) Section 1101(b) of the FAST Act (Pub. L. 114-357) and 49 CFR part 26 regarding the involvement of disadvantaged business enterprises in DOT funded projects;
- (5) 23 CFR part 230, regarding the implementation of an equal employment opportunity program on Federal and Federal-aid highway construction contracts;
- (6) The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) and 49 CFR parts 27, 37, and 38;
- (7) The Older Americans Act, as amended (42 U.S.C. 6101), prohibiting discrimination on the basis of age in programs or activities receiving Federal financial assistance;
- (8) Section 324 of title 23 U.S.C. regarding the prohibition of discrimination based on gender; and
- (9) Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and 49 CFR part 27 regarding discrimination against individuals with disabilities.

**RAPID CITY AREA TRANSPORTATION IMPROVEMENT PROGRAM
(Fiscal Years 2020- 2023)**

I. INTRODUCTION

A. The Transportation Improvement Program

A Transportation Improvement Program (TIP) is a staged, multi-year program of transportation improvements including highway and transit projects. The TIP is a four (4) year priority list, including a financial plan. The Rapid City Area Metropolitan Planning Organization (MPO) and the State Department of Transportation (SDDOT) cooperate in project selection. All projects funded by the Fixing America's Surface Transportation Act (FAST Act) must be included in the TIP.

The TIP should contain at least the following basic elements:

1. Identification of the project;
2. Estimated total cost and amount of federal funds proposed to be obligated during the program period;
3. Proposed source of federal and non-federal matching funds;
4. Identification of the recipient and, state and local agencies responsible for carrying out the project;
5. A priority list of projects and project segments; and,
6. A financial plan.

The TIP is a "living" document. It can be amended with the approval of the Executive Policy Committee (EPC). The TIP focuses on projects that will require four (4) or less years to implement. Within the first four (4) years of the TIP, projects may be delayed or accelerated according to present needs, without requiring an amendment. This flexibility provides coordination among local and state agencies, saves money and decreases disruptions to the transportation system. The TIP is evaluated at year-end, and an annual increment of improvements is added to maintain a full multi-year program.

The TIP does not constitute an appropriation of funds, nor does it replace the normal funding program. The TIP is intended to serve as a fiscal management tool to assist state and local agencies in matching needs with resources. All major projects eligible for placement in the TIP must be selected from an approved Metropolitan Transportation Plan previously called the Long Range Transportation Plan (MTP/LRTP).

In developing the program, the MPO shall provide citizens, affected public agencies, representatives of transportation agency employees, other affected employee representatives, private transportation providers, and other interested parties a reasonable opportunity to comment on the proposed program. Because public involvement is a very important component of the TIP process, the public is given several opportunities to comment. The TIP is brought twice before the Rapid City Planning Commission, the Rapid City Council, and the MPO committees. Public notices are printed in the local newspaper for all of the above meetings, and special public meeting notices are printed specifically for review of the TIP before the MPO committees. The public is given the opportunity to comment in person at the meetings or submit comments during a specified comment period. Responses are made in reply to any comment received, and significant

comments are discussed between the staff involved in the TIP process and ultimately the MPO committees for further discussion as identified in 23 CFR 450.316 (a)(2).

B. The Transportation Improvement Program in Perspective

FAST Act projects in urbanized areas must be included in a TIP that is based on a continuing, comprehensive planning process carried on cooperatively by the state and local communities. The rationale for requiring a TIP can be summarized in three (3) key points.

1. Transportation issues should be approached in a comprehensive fashion with participation from all affected parties;
2. A systematic, comprehensive approach to planning and initiating transportation improvements assists decision-makers in determining the location, timing and financing of needed improvements; and,
3. A cooperatively developed program of transportation improvements should facilitate the coordination of public and private improvements thereby eliminating duplication of effort and expense. The TIP development provides local officials and the general public the opportunity to identify, evaluate, and select short-range community transportation improvements.

The Rapid City Area TIP includes all identifiable transportation related improvement projects that may be undertaken in the planning area over the next four (4) years. Emphasis has been on area needs stated in the LRTP, called RapidTRIP 2040, the Box Elder Strategic Transportation Plan, the Pennington County Transportation Plan, and the Meade County Transportation Plan. The guiding principle used in developing the Rapid City Area TIP was that "the document should be a comprehensive transportation planning and fiscal management tool designed to assist state and local officials in the task of matching needed transportation improvements with available resources to accomplish the community's transportation goals as efficiently and effectively as possible.

II. IDENTIFYING, EVALUATING AND SELECTING CANDIDATE PROJECTS

A. Project Selection and Prioritization

The 2020-2023 Rapid City Area TIP represents a prioritized program of transportation improvements in the following multi-modal areas: streets and highways, public transportation, bicycles, and pedestrians. Projects are prioritized within each program year by funding category. The Rapid City Area TIP is developed cooperatively by the SDDOT, the local participating units of government, agencies, and the MPO committees. The Rapid City Area TIP development is a result of a series of meetings between state and local transportation officials in which the transportation-related needs, concerns, and priorities of each participant are discussed and evaluated. Project-oriented solutions have been developed and initiated into the Rapid City Area TIP by the governmental entity having jurisdiction.

State projects included within the TIP are also found in SDDOT's Statewide Transportation Improvement Program (STIP). The projects identified in the STIP have been prioritized based on overall needs at the state level and the availability of funds for each the regions in South Dakota. The South Dakota Transportation Commission approves the STIP after the MPO acts on the TIP.

Projects located within the cities are either drawn from the city's Capital Improvements Program (CIP), as in the case of Rapid City, or developed internally through other planning and budgeting processes. County projects are developed internally and funding sources are included in the annual provisional budget for the highway departments.

The improvement projects listed in the TIP must conform to the MTP/LRTP for the MPO. The most recent MTP/LRTP was approved in September 2015. *RapidTRIP 2040* can be found on the MPO website at <http://rapidcityareampo.org/documents/longrange-transportation-plan>. Only major projects identified in the approved MTP/LRTP are selected as potential TIP projects. Currently, projects within the TIP are considered to be in compliance with the MTP/LRTP.

Consistent with the project prioritization and evaluation criteria noted in the MTP/LRTP, the TIP projects are prioritized in accordance with the policies and strategies that guide the activities of the Rapid City Area MPO process, including the FAST Act Planning Factors. The planning factors found in the FAST Act include:

- Support the economic vitality of the metropolitan area by enabling global competitiveness, productivity, and efficiency;
- Increase the safety and security of the transportation system for motorized and non-motorized users;
- Increase the ability of the transportation system to support homeland security and safeguard the personal security of all motorized and non-motorized users;
- Increase the accessibility and mobility options available to people and freight;
- Protect and enhance the environment, promote energy conservation, and improve quality of life;
- Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight;
- Promote efficient system management and operation;
- Emphasize the preservation of the existing transportation system;
- Improve resiliency and reliability of the transportation system and reduce or mitigate stormwater impacts of surface transportation; and
- Enhance travel and tourism.

In terms of selecting a project for construction, the FAST Act provides additional flexibility within the period of the first four (4) years. Any projects identified within the initial four (4) year period may be accelerated or moved back based on current funds, needs or priorities. If a newly identified project is to be considered for placement in the TIP, then it must be presented to the transportation planning committees for approval. If approved, an amendment is then placed on the existing TIP to identify the new project. See Appendix A for the amendment process details.

B. Financial Constraint

The FAST Act requires that the Rapid City Area TIP be financially constrained and include a financial plan which demonstrates that funding is available for programmed projects. The Rapid City Area TIP has been developed to meet this requirement, and outlines the available funding in the respective project categories. The following funding sources have been identified for funding street projects.

1. **Assessments** – Cost recoveries levied against real property based upon the cost of improvements made by the city.

2. **Bond funds** – Funds derived from the issuance of general obligation or revenue bonds by the City. These bonds constitute an obligation of the City to repay principal and interest over a specified number of years from general or other revenues of the City.
3. **Enterprise Funds** – Cost recoveries from user fees or surcharges against real property based upon the cost of improvement by the City. These costs are charged within a specific enterprise fund (water, wastewater, landfill, etc.).
4. **Federal Funds** – Grants or loans from the federal government, which are required to be used for specific purposes or projects.
5. **General Fund** – The fund used to account for all financial resources, except those required to be accounted for in another fund. The City's general fund accounts for revenues and expenditures of general property taxes, first penny sales tax, licenses and permits, etc.
6. **Other Funds** – Special revenue or trust funds that account for revenues restricted for specific purposes.
7. **State Funds** – Grants or loans from the State of South Dakota for specific purposes or projects.
8. **Sales Tax (2nd Penny)** – An additional one percent tax levied on gross receipts of retail business and service within the City's jurisdiction that may be used for specific purposes, primarily capital improvement projects and debt retirement.
9. **Tax Increment Financing** – Financing used to fund public investments in an area by capturing, for a time, all of the increased property tax revenue that results when public investment stimulates private investment.
10. **State Fuel Revenue Tax**
11. **Motor Vehicle Excise Tax**
12. **User Fees** – Fees charged for goods and services to recover the costs associated with providing those goods and services, including transit fares and bus advertising.

Figure 1 below depicts the annual construction totals for the federally and non-federally funded projects. The South Dakota Department of Transportation has committed the State and Federal funds for the expenditures in Figure 1. State match is funded from the State Highway Trust Fund. The State Highway Trust fund generates most of its revenue from the state gas tax. City and County governments have committed funding for the required local match. (Both Rapid City and Box Elder, Class 1 cities, list the proposed construction projects utilizing the Federal Highway Administration's Local Urban Systems funds in the respective Capital Improvements Program and included in this report.)

Local	\$2,200,000	\$0	\$1,100,000	\$0	\$3,300,000
Pennington County Road and Bridge Fund					
Local	\$1,200,000	\$0	\$0	\$0	\$1,200,000

The SDDOT provides the match for State sponsored federally funded projects using State Fuel Tax Revenue and Motor Vehicle Excise Tax. The 2020-2024STIP is included on pages 13 - 22.

All projects sponsored by the City of Rapid City are excerpts from the City's Capital Improvement Program (CIP). The CIP is a five-year plan for construction and infrastructure improvements. The five-year plan is revised and updated annually. The CIP Committee reviews the proposed projects and formulates the five-year plan based on available funding and priority. The plan is then presented to the Mayor, Planning Commission and City Council for approval. Projects programmed for the upcoming year (2020) will be adopted as a part of the City budget. Projects scheduled for subsequent years (2021-2023) are tentatively programmed for implementation in those respective years. All projects beyond the current year are subject to annual review. Local funding will be provided by developer contributions, tax increment financing and other local sources. Adequate funds have been committed to fund the City's local match for transportation projects. The City of Rapid City's Capital Improvements Projects are found on pages 23-24.

Rapid City Public Transit receives funding from the Federal Transit Administration, the South Dakota Department of Transportation and the City of Rapid City. The breakdown of these funds and the Transit Program for 2020-2023 is included on page 25. Rapid City Public Transit also receives funds to assist with programming expenditures from fare box and bus advertising revenues.

Rapid City Regional Airport receives funding from the Federal Aviation Administration, the State of South Dakota, and the Airport Enterprise Fund. The Airport Improvement Projects for 2019-2022 are listed on page 26.

The City of Box Elder presently receives funding from the City’s general fund and The State of South Dakota. The City of Box Elder Five-Year Construction Program for 2018-2023 is included on pages 27-28.

Meade County presently receives funding from the County’s general fund. The Meade County Five-Year Construction Program for 2019-2023 is included on pages 29-30.

Pennington County presently receives funding from the County’s general fund. Pennington County has committed funds to those County Secondary and Off System Projects (SDDOT) listed within this TIP. The Pennington County Five-Year Construction Program for 2019-2023 is included on pages 30-33.

FAST Act directs MPOs to consider operation and maintenance (O&M) of the system as part of fiscal constraint, in addition to capital projects. O&M costs represent what is required to operate and maintain existing transportation facilities. To support this assessment, MPOs are charged with providing credible cost estimates in the TIP. The table below was developed in consultation with SDDOT and the local governments. The total O&M costs for the MPO area are greater than \$23 million per year. Figure 4 depicts the O&M costs in each entity’s fiscally constrained budget.

Figure 4 – Projected Operations and Maintenance Costs in the Metropolitan Planning Area

Entity	2020	2021	2022	2023	Total
SDDOT	\$2,100,000	\$2,100,000	\$2,100,000	\$2,100,000	\$8,400,000
Box Elder	\$950,000	\$950,000	\$950,000	\$950,000	\$3,800,000
Rapid City	\$6,119,587	\$6,119,587	\$6,119,587	\$6,119,587	\$24,478,348
Summerset	\$75,000	\$75,000	\$75,000	\$75,000	\$300,000
Meade County	\$5,086,366	\$5,086,366	\$5,086,366	\$5,086,366	\$20,345,464
Pennington County	\$8,673,603	\$8,673,603	\$8,673,603	\$8,673,603	\$34,694,412
Total Projected O&M Costs	\$23,004,556	\$23,004,556	\$23,004,556	\$23,004,556	\$92,018,224

C. Performance Management Requirements

The Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) promote the use of an objectives-driven, performance-based approach to planning for operations as an effective way to integrate operations into planning and programming. This approach focuses on short- and long-term system performance rather than simply focusing on implementation of projects as a measure of success.

FHWA defines Transportation Performance Management as a strategic approach using system information to make investment and policy decisions to achieve national performance goals. It is systematically applied and a regular ongoing process; provides key information to help decision makers allowing them to understand the consequences of investment decisions across transportation assets or modes; improves communication between decision makers, stakeholders, and the traveling public; and ensures that performance targets and measures are developed through cooperative partnerships and based on data and objective information.

As a part of Moving Ahead for Progress in the 21st Century (MAP-21), and continued under the Fixing America's Surface Transportation (FAST) Act, states are to invest resources in projects that, collectively, will make progress toward achieving seven national goal areas that include:

- Safety
- Infrastructure Condition
- Congestion Reduction
- System Reliability
- Freight Movement and Economic Vitality
- Environmental Sustainability
- Reduced Project Delivery Delay

Safety Performance Management (PM1)

Safety was the first national performance goal area for which states and MPOs were required to set performance. The Safety Performance Measures Final Rule supports the Highway Safety Improvement Program (HSIP) as it establishes safety performance management requirements for the purpose of carrying out the HSIP and assesses fatalities and serious injuries on all public roads.

The Safety Performance Management Final Rule establishes five performance measures:

1. Number of Fatalities
2. Rate of Fatalities per 100million Vehicle Miles Traveled (VMT)
3. Number of Serious Injuries
4. Rate of Serious Injuries per 100million VMT
5. Number of Non-motorized Fatalities and Non-motorized Serious Injuries

Rather than setting its own safety targets, the Rapid City MPO has chosen to support the South Dakota DOT's safety targets as published in the South Dakota Highway Safety Improvement Program 2017 Annual Report. The MPO supports those targets by reviewing and programming all Highway Safety Improvement Program (HSIP) projects within the MPO boundary that are included in the DOT's TIP. Any South Dakota DOT sponsored HSIP projects within the MPO area were selected based on safety performance measures and were approved by the South Dakota Transportation Commission.

The South Dakota DOT conferred with stakeholder groups, including the Rapid City MPO, as part of its target setting process. Working in partnership with local agencies, South Dakota DOT safety investments were identified and programmed which will construct effective countermeasures to reduce traffic fatalities and serious injuries. South Dakota DOT projects chosen for HSIP investment are based on crash history, roadway characteristics, and the existence of infrastructure countermeasures that can address the types of crashes present. The South Dakota DOT continues to utilize a systemic safety improvement process rather than relying on "hot spot" safety improvements.

Pavement and Bridge Performance Measures (PM2)

The Federal Highway Administration (FHWA) published a final rule establishing performance measures for State Departments of Transportation (DOTs) to use in managing pavement and bridge performance on the National Highway System (NHS). State DOT targets should be determined from asset management analyses and procedures and reflect investment strategies that work toward achieving a state of good repair over the life cycle of assets at minimum practicable cost. State DOTs may establish additional measures and targets that reflect asset management objectives.

The Final Rule establishes the Pavement Performance Measures as follows.

1. % of Interstate pavements in Good condition
2. % of Interstate pavements in Poor condition
3. % of non-Interstate NHS pavements in Good condition
4. % of non-Interstate NHS pavements in Poor condition

The Final Rule also establishes the Bridge Performance Measures as:

1. % of NHS bridges by deck area classified as in Good condition
2. % of NHS bridges by deck area classified as in Poor condition

Rather than setting its own pavement and bridge performance targets, the Rapid City MPO has chosen to support the South Dakota DOT's pavement and bridge targets and will coordinate with the South Dakota DOT in the development of pavement and bridge targets.

System Performance (PM3)

A final rule establishes performance measures that report on the performance of the Interstate and non-Interstate National Highway System (NHS) to carry out the National Highway Performance Program (NHPP); freight movement on the Interstate system to carry out the National Highway Freight Program (NHFP); and traffic congestion and on-road mobile source emissions for the purpose of carrying out the Congestion Mitigation and Air Quality Improvement (CMAQ) Program.

The Final Rule establishes six performance measures:

1. Percent of reliable person-miles traveled on the Interstate
2. Percent of reliable person-miles traveled on the non-Interstate NHS
3. Percentage of Interstate system mileage providing for reliable truck travel time – Truck Travel Time Reliability Index
4. Total emissions reductions by applicable pollutants under the CMAQ program

5. Annual hours of peak hour excessive delay per capita
6. Percent of non-single occupancy vehicle travel which includes travel avoided by telecommuting

Rather than setting its system performance targets, the Rapid City MPO has chosen to support the South Dakota DOT's system performance and will coordinate with the South Dakota DOT in the development of system performance targets.

III. RECOMMENDED PROJECTS AND PROGRAMS

A listing of projects, programs, and funding sources during Fiscal Years 2020– 2023 follows. The projects are listed in order of priority as designated by private citizens, the Citizen's Advisory Committee, the Technical Coordinating Committee, the Executive Policy Committee, Planning Staff, and the South Dakota Department of Transportation (SDDOT). The recommended projects and programs have been grouped into "System or Functional Element" categories.

APPENDIX A

Rapid City Area Metropolitan Planning Organization Guidelines for Non-Transit Administrative Amendments and Revisions to The Rapid City MPO Transportation Improvement Program (TIP)

Revising an Approved TIP:

The TIP may be revised at any time. A formal TIP revision will be required for any new projects added during the course of the year, project limit changes, change in type of work, etc. Projects within the Metropolitan Planning Organizations (MPO) established Metropolitan Planning Area Boundaries require both a TIP and STIP revision. A TIP revision is any change to the project listings, and/or funding tables in an existing TIP. Revisions require federal approval. A major STIP/TIP revision will require additional public involvement prior to FHWA approval. The MPO's public involvement process will be sufficient for metropolitan area TIP revisions. SDDOT will e-mail a STIP/TIP revision to FHWA requesting approval of the addition or change made and stating the source of funding to maintain a balanced STIP/TIP. Cost changes made to the second, third and fourth year of the TIP will be balanced during the TIP update process.

A revision to the TIP is:

- a. Adding a new project or phase(s) to the TIP, not programmed in the previously approved TIP
- b. Increasing the Federal Funds by more than 100% of the total project cost (minimum of \$250,000 change).
- c. Increasing the total cost of a project the greater of \$3.0 million or 10%.
- d. A change in funding source from 100% non-federal funds to partial or fully-funded with Federal funds.
- e. A change in funding sources across modes for existing projects in the TIP (the funding for a project change from FHWA to FTA or vice versa).
- f. A major change in the project scope or improvement type that changes the intent of the project.

Administrative Amendments to an Approved TIP:

An administrative amendment to the TIP does not require public involvement or FHWA approval. The TIP administrative amendment process consists of notification to all involved parties of the latest changes to the TIP. SDDOT Project Development staff will notify the FHWA by e-mail showing the change made.

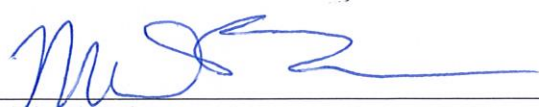

An Administrative Amendment to the TIP is:

- a. Shifting funds within TIP project categories or Federal funding categories without a change in total program TIP funding amounts.
- b. Increases in the Federal funds less than \$250,000 and cost increases less than 100% of the total project cost.
- c. Increasing the total cost of any project with federal funding that doesn't exceed the greater of \$3.0 million or 10%.
- d. Obvious data entry errors.
- e. Splitting or combining projects already in the program that result in no change in overall project schedule or funding.
- f. Changes or clarifying elements of a project location or improvement description that does not change the funding or alter the original project intent.
- g. Movement of a project or phase thereof within the first four years of the approved TIP.
- h. A change in funding source from partial or fully-funded with Federal funds to 100% non-federal funds.
- i. Cost increases for 100% state or local funded projects do not require an amendment, regardless of the State/local source.

Modification of existing STIP/TIP projects in order to make STIP/TIP documents match provided the modification involves minor changes in the scope or funding of a project as provided by this section.

Approved by: 
 Vice Chairman
 Executive Policy Committee
 Rapid City Metropolitan Planning Organization

Date: 4/12/18

Appendix B
Metropolitan Transportation Planning Self-Certification
For the Rapid City Area Metropolitan Planning Organization (RCAMPO)
Fiscal Year 2020-2023

The following is to demonstrate and resolve that the Rapid City Area Metropolitan Planning Organization's transportation planning process meets all applicable requirements of Self Certification Process (23 CFR 450.334).

1. Metropolitan Planning Organization (MPO) (Ref: 23 USC 134(b) and 23 CFR 450.306)

Describe the Entity Designated as the MPO

The Rapid City Area Metropolitan Planning Organization is an association of local and state governments made up the City of Rapid City, the City of Box Elder, Pennington County and Meade County. The South Dakota Department of Transportation (SDDOT), Ellsworth Air Force Base, the Federal Highway Administration (FHWA), the Federal Transit Administration (FTA) and the local school districts also participate. The hosting agency that provides staff and all administrative support to the Metropolitan Planning Organization is the City of Rapid City.

2. Geographic Scope (Ref: 23 USC 134(c) and 23 CFR 450.308)

Describe the Physical Boundaries/Provide a Map

The Rapid City Urbanized Area includes the lands within the City of Rapid City urban growth boundary and the densely populated adjoining areas of Pennington and Meade Counties. The area is shown in the attached map.

3. Agreements (Ref: 23 USC 134(d) and 23 CFR 450.310)

A. Agreements in force among the participating agencies relative to the transportation planning process include:

1. Intergovernmental Agreement for the Purpose of Establishing the Rapid City Area Metropolitan Planning Organization and Specifying MPO Cooperation with the State Department of Transportation signed in December 2007 by the South Dakota Department of Transportation and the parties in the Rapid City Area Metropolitan Planning Organization;
2. Operations Plan was adopted in December 2016. The Operations Plan outlines the procedures and requirements for adopting transportation products and plans for the Metropolitan Planning Organization.

B. Agreements between the State and the MPO include:

1. Annual FHWA and FTA planning funds agreement between SDDOT and City of Rapid City acting as the Rapid City Area Metropolitan Planning Organization;

C. Agreements between the MPO and other entities include:

1. Intergovernmental/Interagency Agreement between the Rapid City Area Metropolitan Planning Organization and the City of Box Elder.
2. Intergovernmental/Interagency Agreement between the Rapid City Area Metropolitan Planning Organization and Meade County.

4. Responsibilities, Cooperation and Coordination (Ref: 23 CFR 450.312)

A. Cooperative Metropolitan Planning Process

The Rapid City Area Metropolitan Planning Organization member entities, including SDDOT, collaborate in carrying out the requirements of the Metropolitan Transportation Planning Process. The Rapid Transit system is owned by the City of Rapid City, a member of the Rapid City Area Metropolitan Planning Organization. This cooperative process includes city and state participation in the decision-making processes of the Rapid City Area Metropolitan Planning Organization Executive Policy Board, Technical Coordinating Committee (TCC), and the Citizen Advisory Committee (CAC). Rapid Transit is represented on the TCC. SDDOT, FHWA and FTA designate staff to serve on the TCC.

The metropolitan transportation planning process includes:

1. Development and maintenance of a Long Range Transportation Plan (RapidTRIP2040 adopted September 2015)
2. Development and maintenance of a Transportation Improvement Program (TIP)
3. Review of specific transportation and development proposals for consistency with RapidTRIP2040
4. Coordination of transportation decisions among local jurisdictions and state agencies
5. Development of an annual work program

B. Agreed Responsibilities for Development of UPWP, Long Range Transportation Plan, and Transportation Improvement Program

1. Rapid City staff currently provides Travel Demand Modeling Services for all Rapid City Area Metropolitan Planning Organization related work.
2. The Rapid City Area Metropolitan Planning Organization leads development and maintenance of the Unified Planning Work Program, RapidTRIP2040, and Transportation Improvement Program. This work is coordinated with all of the Rapid City Area Metropolitan Planning Organization agencies.

5. Metropolitan Transportation Planning Products

A. Unified Planning Work Program (Ref: 23 CFR 450.314)

The purpose of the Unified Planning Work Program is to describe the annual activities, planning studies, and products to be developed by the Metropolitan Planning Organization over a year time. The Unified Planning Work Program identifies who will be involved with the work tasks and the anticipated product or outcome. The Unified Planning Work Program also identifies funding for these tasks which includes total programmed expenditures for each one. The Metropolitan Planning Organization and its coordinating agencies work together to define work activities which will be performed over the year. The City of Rapid City oversees this work program in accordance with the agreements among the City of Rapid City, the City of Box Elder, Pennington County and Meade County. The South Dakota Department of Transportation (SDDOT), Ellsworth Air Force Base, the Federal Highway Administration (FHWA), the Federal Transit Administration (FTA) and the local school districts also participate in the development of the Unified Planning Work Program as members of the Technical Coordinating Committee.

The tasks in the FY2019 UPWP for the Rapid City Area Metropolitan Planning Organization were developed with input from local entities to ensure all transportation issues within the Rapid City Metropolitan Planning Organization's boundaries were considered.

B. Long Range Transportation Plan (Ref: 23 USC 134(g) and 23 CFR 450.322)

The federally compliant RapidTRIP2040 Long Range Transportation Plan was adopted in September 2015.

C. Transportation Improvement Program (TIP) (Ref: 23 USC 134(h) and 23CFR 450.23 & 26)

The Rapid City Area Metropolitan Planning Organization develops the Transportation Improvement Program in cooperation and coordination with all of the members of the Rapid City Area Metropolitan Planning Organization. The Rapid City Area Metropolitan Planning Organization will coordinate its prioritization process and its list of transportation project priorities with SDDOT.

6. Planning Emphasis Areas

The Rapid City Area Metropolitan Planning Organization planning process addresses the FHWA/FTA planning emphasis areas in all projects and policies. The following is a description of these considerations, and a brief explanation of how the factors will be addressed.

A. *Support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency*

It is among the goals of the Rapid City Area Metropolitan Planning Organization's transportation planning activities to support the economic vitality of the Rapid City Urbanized Area and beyond. The Rapid City Urbanized Area is the economic hub of the Black Hills region. Rapid City Area Metropolitan Planning Organization's transportation planning activities are to facilitate the movement of people and goods which is the key in promoting economic activities.

B. *Increase the safety of the transportation system for motorized and non-motorized users*

The safety of the transportation system was among the criteria used by the Rapid City Area Metropolitan Planning Organization in prioritizing transportation projects for funding. The Rapid City Area Metropolitan Planning Organization prepares an annual Pedestrian/Bicycle Crash Report to identify high crash areas for pedestrians and bicyclist. The Rapid City Area Metropolitan Planning Organization also developed an Arterial Street Safety Study, which included a review of street segment crash statistics, identification of street segments exceeding the statistical critical rate, and recommendations to reduce crashes based on analysis of crash types. Some of the recommendations have been implemented since the completion of the study.

C. *Increase the security of the transportation system for motorized and non-motorized users*

The security of the transportation system was among the criteria used by the Rapid City Area Metropolitan Planning Organization in prioritizing transportation projects for funding.

D. Increase the accessibility and mobility options available to people and for freight

It is among the goals of the Rapid City Area Metropolitan Planning Organization's transportation planning activities to increase the accessibility and mobility options of people and freight in the Rapid City Urbanized Area. The Rapid City Area Metropolitan Planning Organization will continue working with local mobility advocacy groups, the cities, and counties to identify opportunities for increasing the accessibility and mobility options of all people in the Rapid City Urbanized Area. Rapid City Area Metropolitan Planning Organization staff has in the Coordinated Human Services Public Transportation Plans.

E. Protect and enhance the environment, promote energy conservation, and improve quality of life

The Rapid City Area Metropolitan Planning Organization transportation planning activities include full consideration of environmental issues.

F. Enhance the integration and connectivity of the transportation system, across and between modes for people and freight

The Rapid City Area Metropolitan Planning Organization transportation planning process is comprehensive and includes all modes of transportation and the mobility needs of all people. Multi-modal and intermodal transportation planning will help provide connectivity across all modes and for all users of the system.

G. Promote efficient system management and operations

The Rapid City Metropolitan Planning Organization approved the ITS Master Plan for Integration Strategies in November 2003. The Rapid City Area Metropolitan Planning Organization will continue to use ITS measures as a means of enhancing the efficiency of existing transportation system and operations.

The Metropolitan Plan promotes a multi-modal transportation system. This approach will help to maximize transportation efficiency by providing multiple travel options. The ultimate goal will be to reduce the demand on the highway system, which will increase roadway capacity and reduce maintenance costs.

H. Emphasize the preservation of the existing transportation system

Preservation of the existing transportation system is a priority in the Long Range Transportation Plan. Preservation of the existing system was a key consideration while identify future revenues. The estimated costs of preservation were taken "off the top" of the overall funding forecasts. The remaining funds were then allocated to capacity improvements and other non-preservation projects. The Long Range Transportation Plan devotes a large portion of available funds to the maintenance and preservation of existing transportation system.

I. Coordinate with State DOT consultation efforts with non-metropolitan local officials

The adopted Rapid City Area Metropolitan Planning Organization Unified Planning Work Program contains tasks to coordinate transportation issues and activities with SDDOT.

J. Enhance the technical capability of the transportation planning processes

The Rapid City Area Metropolitan Planning Organization programs funds in the Unified Planning Work Program and Transportation Improvement Program to upgrade the travel

demand model, update the underlying travel data by participating in joint surveys, and provide training opportunities for staff.

K. *Linking the NEPA and planning processes*

The RapidTRIP 2040 Long Range Transportation Plan includes environmental considerations that identify known historical, cultural, archeological, and natural resources. This amendment also identifies potential mitigation activities. The data in this amendment will help improve the project development process and hopefully speed project delivery.

L. *Coordination and provision of Human Service and Transportation Disadvantaged Services (ADA, Elderly, and Disabled)*

Metropolitan Planning Organization staff and local transit service providers began working in 2007 to develop a coordinated human services transportation plan. A plan was completed in October 2007, updated in 2013, and was recently updated in 2019. The goal of this project was to develop and implement a public transportation plan for the Rapid City Urbanized Area with a particular focus on providing access to critical services for lower income residents, seniors, and other special needs populations. The Rapid City Area Metropolitan Planning Organization has been involved in that effort to ensure the continued availability of federal transportation funds.

7. *Public Involvement (Ref: 23 CFR 450.316(b))*

Rapid City Area Metropolitan Planning Organization Public Participation Plan

The Rapid City Area Metropolitan Planning Organization adopted a MAP-21 compliant public participation plan in November 2016. This plan serves as the statement of transportation public participation policies adopted by the Rapid City Area Metropolitan Planning Organization. Participation of the public in transportation planning activities is vitally important to the Rapid City Area Metropolitan Planning Organization. The emphasis of the adopted policies in this report is on regional system planning products regularly produced in the transportation planning process. Various techniques will selectively be used to provide information and solicit public comment. Some examples of public participation activities are briefly described below.

- A. Newspaper Advertisements
- B. Web Site
- C. Articles
- D. Press Releases
- E. Flyers
- F. TV/Radio
- G. Public Service Announcements
- H. Interviews
- I. Community Forums
- J. Public Meetings
- K. Public Hearings
- L. Group Presentations
- M. Advisory Committee

8. *Title VI (Ref: Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d-1) and 49 CFR part 21)*

Title VI of the Civil Rights Act of 1964 states that “no person in the United States shall, on the grounds of race, color or national origin be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal

financial assistance” [42 USC 2000d]. Executive Order 12898, Federal Actions to Address Environmental Justice in Minority and Low-Income Populations, was signed by President Clinton on Feb. 11, 1994 and published in the Feb. 16, 1994 Federal Register, Vol. 59, No. 32. The Executive Order and accompanying memorandum reinforced the requirements of Title VI of the Civil Rights Act of 1964 that focus federal attention on the environmental and human health condition in minority and low-income communities. Together these two laws promote non-discrimination in federal programs affecting human health and the environment, and provide minority and low income communities access to public information and an opportunity to participate in matters relating to transportation and the environment.

Through the regional planning process, the Metropolitan Planning Organization and partner agencies will thoroughly analyze the three fundamental environmental justice principles. The principles are:

- To avoid, minimize or mitigate disproportionately high and adverse human health or environmental effects, including social and economic effects of programs, policies and activities on minority populations and low-income populations;
- To ensure full and fair participation by all potentially affected communities in the transportation decision-making process; and
- To prevent the denial of, reduction of, or significant delay in the receipt of transportation benefits by minority and low-income populations.

The Metropolitan Planning Organization staff developed a Title VI Policy that was adopted in 2012 to ensure compliance with the Civil Rights Act of 1964 and to provide the public with procedures to request assistance in addressing any issues that may surface. Additionally, the Metropolitan Planning Organization’s public participation plan addresses the full and fair participation of all populations.

9. Disadvantage Business Enterprise (DBE) (*Ref: Section 1101(b) of Pub. L. 109-59, 49 CFR part 26*)

The Rapid City Area Metropolitan Planning Organization shows a good faith effort to solicit Disadvantage Business Enterprises (DBEs) when procuring assistance from private contractors. The Rapid City Area Metropolitan Planning Organization awards an additional five points out of 100 points to private contractors who are DBEs or have a DBE subcontractor. It is the policy of Rapid City Area Metropolitan Planning Organization to ensure no discrimination on the basis of race, color, creed, national origin, sex, or age in any employment or business opportunity.

10. Americans with Disabilities Act (ADA) (*Ref: Americans with Disabilities Act of 1990, Pub. L. 101-366, 104 Stat. 327, as amended, and 49 CFR 27, 37, and 38*)

The Americans with Disabilities Act of 1990 (ADA) requires involving persons with disabilities in the development and improvement of transportation services. Planners, engineers, and builders must provide access for the disabled at sidewalks and ramps, street crossings, and in parking or transit access facilities. Persons with disabilities must also be able to access the sites where public participation activities occur as well as the information presented. The Metropolitan Planning Organization’s public participation plan addresses the Americans with Disabilities Act.

Rapid City Area Metropolitan Planning Organization public meetings are held in places accessible to people with disabilities. The Rapid City Area Metropolitan Planning Organization office is located in an accessible building.

11. Air Quality (Ref: 40 CFR 51; OAR 340-2-710 through 340-20-1080)

A. Regional Air Quality Status of the Rapid City Area Metropolitan Planning Organization Area

The Rapid City Urbanized Area is not in violation of EPA's National Ambient Air Quality Standards (NAAQS). The area, therefore, is not designated nonattainment for any of the Air Quality Criteria Pollutants.

B. Describe Conformity Status of the Rapid City Area Metropolitan Planning Organization Plan and TIP

According to the Clean Air Act Amendments (CAAA) of 1990, the Rapid City Urbanized Area is not required to demonstrate Air Quality Conformity of its transportation plans, programs and projects to the State Implementation Plan.

12. Lobbying Prohibition (Ref. 49 CFR 20)

The funding agreement and all contracts with the Rapid City Area Metropolitan Planning Organization include language regarding breach of any federal statutes, rules, program requirements and grant provisions applicable to the federal funds. Through approval of that agreement, the Rapid City Area Metropolitan Planning Organization agrees to follow all applicable rules.

13. Employment & Business Opportunity Discrimination (Ref. 49 USC 5332)

The federal code states: A person may not be excluded from participating in, denied a benefit of, or discriminated against under, a project, program, or activity receiving financial assistance under this chapter because of race, color, creed, national origin, sex, or age.

It is the policy of Rapid City Area Metropolitan Planning Organization to ensure no discrimination on the basis of race, color, creed, national origin, sex, or age in any employment or business opportunity.

14. Equal Employment Opportunity - Federal Aid Construction Projects (Ref. 23 CFR part 230)

This requirement is not applicable to the Rapid City Area Metropolitan Planning Organization. The Rapid City Area Metropolitan Planning Organization is a planning organization and does not construct projects.

15. Older Americans Act (Ref. 42 USC 6101)

The federal code states: It is the purpose of this chapter to prohibit discrimination on the basis of age in programs or activities receiving Federal financial assistance.

It is the policy of Rapid City Area Metropolitan Planning Organization to ensure no discrimination on the basis of age. The Metropolitan Planning Organization's public participation plan addresses the full and fair participation of all populations.

16. Gender Discrimination (Ref. Section 324 of title 23 USC)

The federal code states: No person shall on the ground of sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal assistance under this title or carried on under this title.

It is the policy of Rapid City Area Metropolitan Planning Organization to ensure no discrimination on the basis of sex. The Metropolitan Planning Organization's public participation plan addresses the full and fair participation of all populations.

17. Discrimination Against Individuals with Disabilities (*Ref. 29 USC 794 and 49 CFR part 27*)

The federal code states: No otherwise qualified individual with a disability in the United States, as defined in section 705 (20) of this title, shall, solely by reason of her or his disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance or under any program or activity conducted by any Executive agency or by the United States Postal Service.

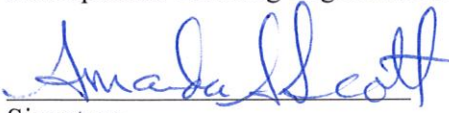

It is the policy of Rapid City Area Metropolitan Planning Organization to ensure no discrimination occurs on the basis of disability. The Metropolitan Planning Organization's public participation plan addresses the full and fair participation of all populations.

METROPOLITAN TRANSPORTATION PLANNING PROCESS SELF-CERTIFICATION STATEMENT

In accordance with 23 CFR 450.336, the **South Dakota Department of Transportation** and the **Rapid City Area Metropolitan Planning Organization** for the **Rapid City, South Dakota urbanized area** hereby certify that the transportation planning process is addressing the major issues in the metropolitan planning area and is being conducted in accordance with all applicable requirements of:

- (1) 23 U.S.C. 134, 49 U.S.C. 5303, and this subpart;
- (2) Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d-1) and 49 CFR part 21;
- (3) 49 U.S.C. 5332, prohibiting discrimination on the basis of race, color, creed, national origin, sex, or age in employment or business opportunity;
- (4) Section 1101(b) of the FAST Act (Pub. L. 114-357) and 49 CFR part 26 regarding the involvement of disadvantaged business enterprises in DOT funded projects;
- (5) 23 CFR part 230, regarding the implementation of an equal employment opportunity program on Federal and Federal-aid highway construction contracts;
- (6) The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) and 49 CFR parts 27, 37, and 38;
- (7) The Older Americans Act, as amended (42 U.S.C. 6101), prohibiting discrimination on the basis of age in programs or activities receiving Federal financial assistance;
- (8) Section 324 of title 23 U.S.C. regarding the prohibition of discrimination based on gender; and
- (9) Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and 49 CFR part 27 regarding discrimination against individuals with disabilities.

SOUTH DAKOTA DEPARTMENT OF
ENVIRONMENT & NATURAL RESOURCES

Dear Mr. Mayer:

The Rapid City Area Metropolitan Planning Organization (MPO) is comprised of the City of Rapid City, the City of Box Elder, the City of Piedmont, the City of Summerset, portions of Pennington County and portions of Meade County. By law, all urbanized areas with a population of 50,000 or greater are required to have a Metropolitan Planning Organization that is responsible for area transportation planning and programming activities.

The Rapid City Area Metropolitan Planning Organization is currently updating its Transportation Improvements Program (TIP) for the years 2020-2023. The TIP is a five year plan for proposed capital and operation expenditures for public transportation, including potential funding sources, for the Rapid City Metropolitan Area. I have enclosed a draft of the 2020-2023 TIP for the Rapid City Metropolitan Area for your review and comment. An electronic version can be viewed at:

<http://www.rapidcityareampo.org/application/files/6215/5977/5348/19TP015 - 2020 - 2023 Transportation Improvement Program Draft Report.pdf>

Please respond within 30 days with any comments or questions. Thank you for your time and consideration of this matter.

Sincerely,

Kelly Brennan, Planner II
Long Range Planning

OCT 01 2019

Planning, Programs, and Project Management Division

Ms. Kelly Brennan
City of Rapid City
300 Sixth Street
Rapid City, South Dakota 58402-2035

Dear Ms. Brennan:

The U.S. Army Corps of Engineers, Omaha District (Corps) has reviewed your letter dated August 28, 2019 (received September 5, 2019) regarding the Transportation Improvements Program (TIP) for years 2020-2023 for Rapid City, South Dakota. It is understood that the TIP details proposed capital and operation expenditures for public transportation. We offer the following comments for your consideration:

Your plans should be coordinated with the state water quality office that has jurisdiction within the area where the project is located to ensure compliance with federal and state water quality standards and regulations mandated by the Clean Water Act and administered by the U.S. Environmental Protection Agency. Please coordinate with the South Dakota Department of Environment & Natural Resources concerning state water quality programs.

If you have not already done so, it is recommended you consult with the U.S. Fish and Wildlife Service and the South Dakota Department of Game, Fish and Parks, regarding fish and wildlife resources. In addition, the South Dakota State Historic Preservation Office should be contacted for information and recommendations on potential cultural resources in the project area.

It should be ensured that the proposed project is in compliance with floodplain management criteria of Pennington and Meade Counties and the State of South Dakota. As a minimum, the design should ensure that the one percent annual chance floodwater surface elevation of any stream affected that has a designated floodway, is not increased relative to pre-project conditions. If a designated floodway has not been identified then the design should ensure that the one percent annual chance floodwater surface elevation is not increased by more than one-foot relative to pre-project conditions. It is desirable, however, that water surface elevations either remain the same or decrease as a result of this project.

Since the proposed project area may contain federal flood control projects, your plans should be submitted to the local floodplain administrator for review and approval prior to construction. It should be ensured that the proposed project is in compliance with the floodplain management criteria of Pennington and Meade Counties and the State of South Dakota. In addition, please coordinate with the following floodplain management office:

South Dakota Division of Emergency Management

Any proposed project that may alter Corps civil works projects requires Department of the Army authorization under Section 408 (33 USC 408) of the Rivers and Harbors Act. The Section 408 review is to ensure the proposed activities will not impair the usefulness of federal projects and are not injurious to the public interest. If this is a federal flood risk reduction project, the alteration request should be coordinated through the local sponsor. The local sponsor point of contact may be provided by the Omaha District contact below. Please coordinate with the Omaha District contact to determine the level of Section 408 review that is necessary. Also please make note of the Programmatic Environmental Assessment for the state of South Dakota that identifies Section 408 actions deemed categorical permissions and the steps needed to process requests in an expedited fashion.

Re: The Rapid City Area Metropolitan Planning Organization (MPO) Transportation Improvement Program (TIP) 2020 – 2023, Pennington and Meade Counties, South Dakota

Dear Ms. Brennan:

The South Dakota Department of Environment and Natural Resources' Ground Water Quality program has reviewed the above-referenced TIP plan update. Based on the information submitted in your letter dated August 28, 2019, the department has no specific groundwater concerns at this time. However, the department will comment on specific projects later when notification is received confirming the status of individual projects, or at a time when more details become available.

If you would like to do an initial review of one possible environmental concern, please note that there have been numerous petroleum and other chemical releases throughout the state. There have been a significant number of releases have occurred in the Rapid City region over time, and residual contamination from some releases may be encountered during the proposed construction projects. You can obtain more data regarding releases reported in South Dakota at the following website: <http://arcgis.sd.gov/server/denr/spillsviewer/>.

If construction activities for these projects disturb one or more acre(s) of soil, a storm water permit may be required. For more information or to obtain a storm water permit, please contact the Department at 1-800-SD-Storm or visit: <http://denr.sd.gov/des/sw/StormWaterandConstruction.aspx>.

RAPID CITY DEPARTMENT OF
COMMUNITY DEVELOPMENT

If contamination is encountered during construction activities or caused by the construction work, the Rapid City Area MPO or its designated representative must report the contamination to the department at (605) 773-3296. Any contaminated soil encountered or caused by the construction must be temporarily stockpiled and sampled to determine disposal requirements, and the construction materials used in the contaminated area should be evaluated for chemical compatibility and adjusted accordingly.

Thank you for the Metropolitan Planning Organization's efforts to protect South Dakota's environment. If you have any questions regarding this letter, please contact me at (605) 773-3296 or georgina.smith@state.sd.us.

Sincerely,

RE: Air Quality Review of the Rapid City Area Transportation Improvement Plan

Dear Kelly Brennan:

The review of the Rapid City Area Transportation Improvement Plan (TIP) for 2020-2023 has been completed by the Air Quality Program. No special transportation conformity planning is required in the TIP because the area is attaining the National Ambient Air Quality Standards. The Department finds the Rapid City Area TIP as supplied in compliance with the South Dakota Air Quality State Implementation Plan.

Transportation planning is an important tool in maintaining good air quality levels in the state. It is the intent of the South Dakota Department of Environment and Natural Resources to maintain an air quality site in the City of Rapid City. The site will evaluate air pollution trends and control measures, so this area continues to attain the National Ambient Air Quality Standards.

If you have questions or require further information, please contact me at 605-773-6706. Thank you for supplying the information to the Air Quality Program for review.

Sincerely,

A handwritten signature in blue ink that reads 'Rick Boddicker'.

Darin Bergquist, Secretary
South Dakota Department of Transportation
700 E Broadway Ave
Pierre, SD 57501-3339

Subject: Approval of the SDDOT's 2020 – 2023 STIP

Dear Secretary Bergquist:

The Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) have jointly reviewed the South Dakota Department of Transportation (SDDOT) 2020 – 2023 Statewide Transportation Improvement Program (STIP) and each Transportation Improvement Program (TIP) for the Sioux Falls, Rapid City, and Sioux City metropolitan planning areas. In accordance with 23 CFR 450.218, FHWA and FTA hereby find that the projects in the 2020 – 2023 STIP are based on a transportation planning process that substantially meets the requirements of 23 CFR Part 450 Subpart A, B, and C; 49 U.S.C. Sections 5303-5305; and 23 U.S.C. Sections 134 and 135. This finding is based on the certifications of the statewide and metropolitan transportation planning processes for, and within, the State of South Dakota and the FHWA's and FTA's participation in those transportation planning processes. Therefore, we hereby jointly approve, effective October 1, 2019, South Dakota's 2020 - 2023 STIP.

We find that the TIPs in South Dakota urbanized areas were developed based on continuing, comprehensive transportation planning processes carried out cooperatively by SDDOT and local communities pursuant to the applicable regulations and laws. SDDOT has concurred in the self-certification of each metropolitan planning organization (MPO). Based on our involvement and knowledge of the various planning processes, we likewise concur that these planning processes are being conducted in conformance with applicable federal requirements. In addition, we accept the TIPs and accompanying self-certification by the Rapid City and Sioux Falls MPOs. Action on the Sioux City MPO TIP will be taken by the FHWA Iowa Division and FTA Region 7.

Included in your STIP submittal was the SDDOT "Statewide Transportation Planning Process Certification." With our ongoing knowledge and involvement in statewide planning in South Dakota, we concur that the SDDOT is in substantial compliance with the applicable planning statutes, regulations, and procedures.

When approving the STIP, the FHWA and FTA are required to make a planning finding documenting SDDOT's and the MPO's compliance with the planning requirements. Enclosed is a document titled *Federal Planning Finding South Dakota 2020- 2023 STIP*. Included are required corrective actions, recommendations for improvement, and commendations. Based on the federal involvement in the statewide and metropolitan planning processes, and review of required documents, FHWA and FTA have determined the statewide and metropolitan planning process

substantially meets the requirements of statute and regulation. Below is a summary of the issues identified with the 2020 -2023 STIP Planning Finding.

Corrective Actions:

None

Recommendations:

The SDDOT Statewide Long Range Transportation Plan is over nine years old and should be updated. The SDDOT is encouraged to update the Statewide Long Range Transportation Plan prior to submission of the 2021 – 2024 STIP. The State’s Public Involvement Plan is also over nine years old and is in need of being updated..

Commendations:

The South Dakota Department of Transportation has an excellent STIP public involvement process. SDDOT’s STIP Tribal consultation process has consistently been recognized as a best practice. SDDOT has developed an excellent working relationship with the MPOs and planning and programming of projects is done in a cooperative manner.

We appreciate the efforts and cooperation of your staff in developing the STIP. If you have questions or need additional information, please contact Mark Hoines (FHWA) at 605.776.1010 or FTA’s Ranae Tunison (FTA) at 303.362.2397.

Sincerely,

Sincerely,

for R. Kirk Fredrichs
Division Administrator
FHWA SD Division

for Cindy Terwilliger
Regional Administrator
FTA Region 8

If there are any agreed upon changes to the assumptions in this document a revision will be created, endorsed and signed by all the signatories.

1. Introduction and Project Description

Background Information

Every five years, the Rapid City Area MPO produces a Metropolitan Transportation Plan (MTP), previously known as the Long Range Transportation Plan. The purpose of the plan is to encourage and promote a safe and efficient transportation system to serve future year transportation demands. Results of the MTP process are intended to serve the overall mobility needs of the area, while also being cost effective and consistent with state and local goals and objectives.

Location and Study Area

The Rapid City Area MPO is located in western South Dakota and area of study includes the City of Rapid City, the City of Summerset, the City of Box Elder, the City of Piedmont, unincorporated areas of Black Hawk and Rapid Valley, and the developing portions of Pennington and Meade Counties as depicted in **Figure 1**.

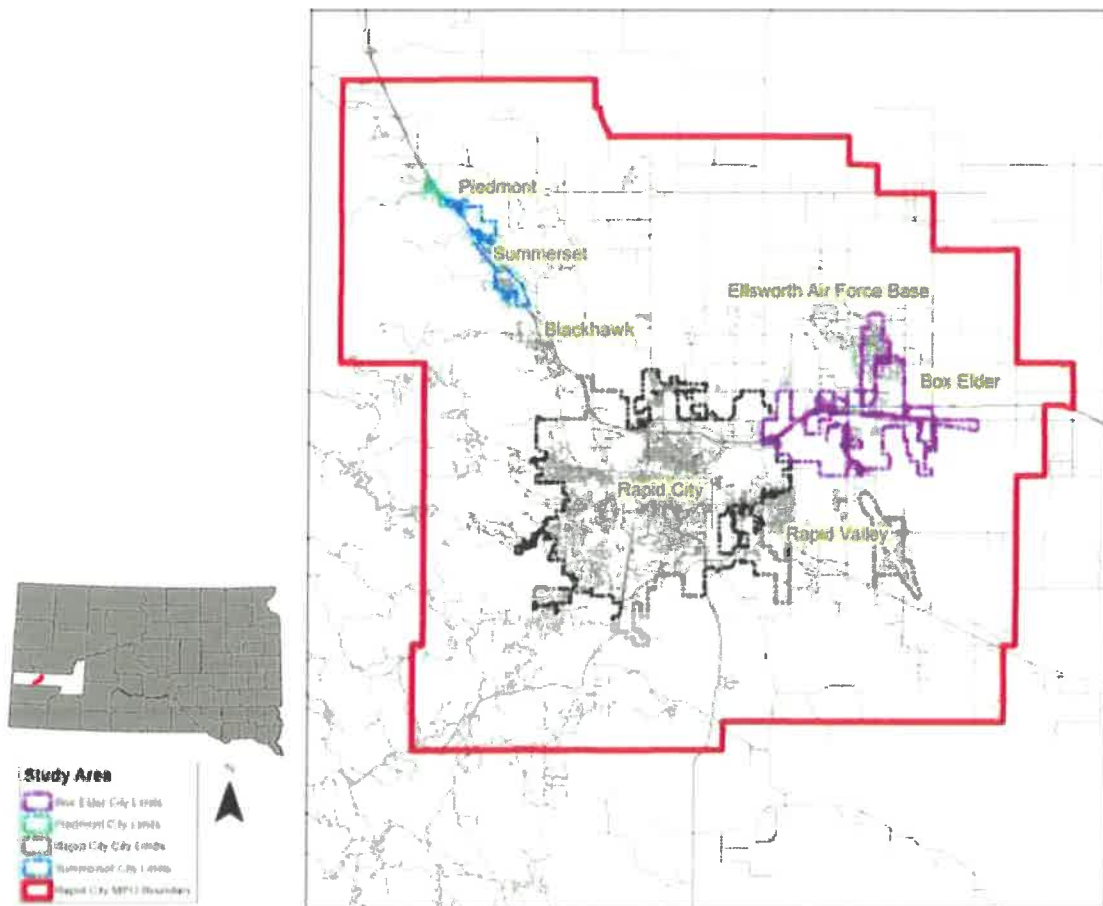

Figure 1: Study Area
(Obtained from RFP)

Need for Study

The MPO Manages the transportation network and mobility needs for the defined MPO area and recognizes the inter-connectivity between network accessibility and land use development patterns. Prior decision making has focused on producing a multi-modal transportation network consisting of roads, transit service, bicycle and pedestrian facilities, freight, and a regional airport. These modes of transportation provide a foundation for handling the flow of goods, and services to and from the area, as well as establish a system for area residents to access jobs, shopping and recreational facilities.

The Rapid City MPO Planning Area is designated by the Governor and The MPO Executive Policy Committee and encompasses the 20 year urbanized growth area, as defined in 23 CFR Part 450. As such, the transportation planning process is mandated to meet the requirements of MPO transportation plans as set forth in the CFR.

This study will develop a list of transportation projects to meet anticipated future demand needs of the Rapid City area through the year 2045. Major components of the study process include:

- Review and Analysis of the existing Major Street Plans for all of the MPO member agencies, as appropriate.
- Complete year 2045 traffic forecasts for the Rapid City Planning Area to identify future transportation needs by developing and validating the travel demand forecast model.
- Develop goals, strategies, and performance measures for the year 2045 to identify planning and prioritize elements within the MTP and fiscally constrain the future needs.
- Update of 2011 Bicycle and Pedestrian Plan.
- Consistency with federal and state guidelines and significant attention to public participation.

Study Schedule

Date	Task/Event
April 18, 2019	Notice to Proceed
March/April 2020	Draft Fiscally Constrained Plan
May/June 2020	Draft Report to SAT for Review
June 2020	Draft Report to MPO Committees
July 2020	Final Draft to SAT for Review
August 2020	Final Report to MPO for Review
August 2020	Final Report to MPO Committees
September 18, 2020	Study Completion

Facilities Affected by Study

The facilities affected by this project include the transportation network and systems identified in the Major Street Plans for the Rapid City Area MPO and its respective member agencies.

Study Advisory Team Members

Participant	Agency
Kip Harrington	RCAMPO
Kelly Brennan	RCAMPO
Patsy Horton	RCAMPO
Mark Hoines	FHWA
Ranae Tunison	FTA
Jerry Ortbahn	SDDOT
Mike Carlson	SDDOT
Stacy Bartlett	SDDOT
Sallie Doty	SDDOT
Ted Johnson	Rapid City Public Works

Participant	Agency
Megan Gould	Rapid Transit
Bill Rich	Meade County
Joseph Miller	Pennington County
Bob Kaufman	Box Elder
Lonnie Harmon	Summerset
Matt Fitting	RCAMPO/Bike and Pedestrian
Dennis Berg	RC Area Schools

2. Analysis Years/Periods

The Study will evaluate transportation needs for the year 2045 planning horizon, with a baseline model year 2018. There are no interim years for analysis or model development assumed, although time bands for project implementation are assumed - Short-Term (2020-2025), Mid-Term (2026-2035), Long-Term (2036-2045).

3. Data Collection

Data collection needs for the study will be provided by the MPO and / or member jurisdictions, and are identified as follows:

- GIS Data including:
 - daily traffic volumes
 - major street plan
 - sidewalk inventory (existing and proposed)
 - transit routes and stops
 - existing and proposed bicycle facilities (bike lanes, paved shoulders, cycle tracks/separated bikeways, trails, side paths, signed routes, shared lane marking, crossing features such as RRFBs, pedestrian signals, etc.)
 - traffic signals
 - existing functional classifications
 - street inventory including existing lanes and posted speeds
 - pavement conditions
 - existing and future land uses
 - on-street parking locations and widths
 - key community destinations (schools, college/university, parks, civic/cultural destinations, recreational destinations, activity centers, community centers, hospitals, etc.)
- Historical TIP documents
- Traffic data, including volume counts, crash data
- Current CIPs and budgets for jurisdictions
- Recent and on-going studies at the City/Regional/State Level
- MPO Travel Demand Model Data Sets

- Socio-economic data files for the base year and for 2045, allocated to the model's TAZ structure.
- National Performance Management Research Data Set (NPMRDS)
- The consultant team will not be responsible for conducting traffic counts

4. Traffic Operations Analysis

Planning level volume-to-capacity (V/C) methodology based on daily traffic counts and estimates of peak-hour capacity (adjusted for daily volumes) will be provided for roadway segments. Specifically, this will include:

- The daily V/C approach will be tailored to represent worst peak hour conditions based on any peak-hour volume data available in the study area, and the operations results of any recent corridor studies. The traffic volumes which will be used are adjusted non-summer/non-peak season volumes.
- All functionally-classified streets with recent traffic volume counts will be included in the V/C analysis.
- Daily 2045 traffic forecasts will be completed for all modeled segments with existing traffic volume counts. Those segments with 2045 traffic forecasts will also have traffic operations analysis completed on them for future E+C conditions.

Travel reliability results will be reported for corridors with NPMRDS data provided (assumed to be National Highway System links only). This assessment will be consistent with the data reported for the last PM 3 System Performance / Freight / CMAQ reporting period.

5. Travel Forecasting

The MPO's travel demand model will be updated and revalidated to a baseline year 2018 and a model year 2045. The assumptions associated with this update involve:

- MPO staff will provide all base year and future year (2045) socio-economic data in TAZ format.
- MPO staff will provide all current model files for updating.
- MPO staff will identify projects constructed since the last model update that need to get added into the base year network. These projects will be coded into the base year network.
- Any "committed" projects in the region will be coded as a part of the "Existing-plus-Committed" (E+C) network scenario. MPO, local jurisdictions, and SDDOT will identify committed projects to be added to the network.
- MPO staff will provide traffic counts in a GIS format where they can be "spatial joined" to the roadway network for validation purposes.
- The model will be developed and validated to reflect daily traffic conditions for the non-summer / non-peak season.

- The model will be constructed within the guidelines and parameters outlined in *NCHRP 716: Travel Demand Forecasting: Parameters and Techniques*, when better local data are not available.
- Sources such as Census Transportation Planning Package (CTPP) will be used to validate trip distribution results.
- The model will be validated generally within the guidelines outlined in TMIP's *Travel Model Validation and Reasonableness Checking Manual, Second Edition*.
- Model validation and operation documentation shall be provided. FHWA will be provided a draft version for review and comment.
- Once the fiscally-constrained plan has been established, a 2045 planned network will be built and run. The planned network will include the E+C network, and the fiscally constrained projects that will impact the network operation (new links and capacity improvements).

For traffic forecasting applications in the MTP, where existing traffic counts are available a post-processing approach similar to NCHRP 255 will be applied. This adjusts future year traffic model output to reflect the deviation seen in the base year model between model assignments and observed counts.

6. Safety

- SDDOT will provide several years (2014 to 2018) of recent historical GIS-based crash data for the study area.
- Crash history data will be reviewed to identify:
 - 20 highest vehicular crash-rate intersections in the region.
 - 20 highest serious injury/fatal crash-rate intersections in the region.
 - 20 highest serious injury/fatal bike/ped crash frequency intersections in the region.
- MPO staff will provide calculations for the most recently five-year rolling averages for safety performance measures.
- Potential crash modification factors (CMF) treatments will be reviewed for potential inclusion as safety projects at the 20 highest frequency crash locations.

7. Multimodal Analysis

A Freight Assessment will be completed, using available data sources and studies. This will include:

- This section will report the Federal freight performance measure, the freight reliability on the Interstate System.
- Truck flow data from the Freight Analysis Framework will be utilized.
- Additional assessments will include freight-generating land use data, truck volumes, and rail data from FRA.

The Transit Assessment will summarize current operations data (either directly from the transit agency, or from the National Transit Database) and near-term programmed transit activities. The MPO's Transit Feasibility Study (December 2017) will also be

reviewed and local stakeholders will be engaged about the elements and recommendations from that plan to incorporate.

An intercity travel summary, including reviews of intercity bus, commercial air, and rail service will be completed.

The 2011 Bike and Pedestrian Plan will be updated under a separate cover and is described in Section 10 of this document.

8. Financial Plan

The fiscally-constrained plan will be developed in the following time-bands: Short-Term (2020-2025), Mid-Term (2026-2035), Long-Term (2036-2045).

It is assumed that planning-level estimates of operations and maintenance costs, and a reasonable list of reconstruction and major rehab projects, and associated cost estimates, will be provided by each responsible jurisdiction. Construction cost estimates will be calculated in base year (2020) dollars, but will be inflated to Year of Expenditure (YOE) dollars in the MTP. Similarly, revenues will also be inflated to YOE revenues. The inflation rates for each will be determined later in the project and the M&A document will be amended at that time to reflect the agreed-upon inflation values.

9. Alternatives Prioritization / Major Street Plan

The alternatives analysis will prioritize potential projects and strategies (“alternatives”) for implementation into the Major Street Plan through project prioritization metrics:

- The project prioritization metrics will be based on the MTP goals, objectives, and regional system performance measures.
- The project prioritization will be tailored by the input of staff and the study review committee.
- Reconciliation of corridor consistency across individual member agency jurisdictional plans.

The Major Street Plan will include project details for each of the recommended projects, including:

- General project limits
- Planning-level cost estimates
- General purpose and need for each improvement
- General assessment of constructability
- High-level environmental screening.

10. Bike & Ped Plan

The assessment of the previous plan will require assistance from agencies in measuring progress against stated benchmarks in 2011 Bicycle and Pedestrian

Master Plan and identifying specific projects completed since adoption of the previous 2011 plan.

Level of Traffic Stress (LTS) will be calculated for all streets and bicycle facilities in the study area (dependent on availability of data, particularly for local streets) using the methodology in *Low-Stress Bicycling and Network Connectivity (Mineta Transportation Institute, 2012)*.

Equity analysis will be based on census block group data available from the 2016 American Community Survey (ACS) for poverty, minority population, limited English proficiency, population age 65 or above, population age 18 or below, zero-vehicle households, and means of transportation to work other than personal motor vehicle. A composite equity score will be developed at the block group level based on the number of variables above the regional average.

Bicycle and pedestrian demand analyses will be completed based on 2045 socioeconomic data (TAZ format), which will use population and employment density and ratio of population to employment, as well as proximity to key community destinations.

Proposed projects from the 2011 plan will be evaluated to determine if they should be maintained as-is or be modified or removed. Modified or additional projects will be based on evaluation of LTS, equity, bike and ped demand, existing and proposed bike/ped networks, identified network gaps, connections to facilities and destinations, and public input with a specific focus on low-stress facilities and streets.

A primary reference for bicycle facility selection will be the *FHWA Bicycle Selection Guide (February 2019)*.

11. Deviations/Justifications

There are no known deviations/justifications at this time. Any modifications to study methodologies or assumptions will be addressed through an amendment to this document.

12. Conclusion

All sections contained in this document will guide the development of the Metropolitan Transportation Plan.

13. Appendices

The appendix includes the following:

A. Methods and Assumptions Meeting Minutes

Meeting Minutes

Project: RCAMPO – MTP and Bike/Ped. Plan Update

Subject: M&A Meeting Minutes

Date: Monday, June 17, 2019

Location: SDDOT Rapid City Region Conference & Pierre Conference Rooms

Attendees: Kip Harrington – RCAMPO
Kelly Brennan – RCAMPO
Megan Gould – Rapid Transit
Brad Remmich – SDDOT
Mike Carlson – SDDOT
Stacy Bartlett - SDDOT

Bob Kaufmann – City of Boxelder
Lonnie Harmon – City of Summerset
Dustin Hamilton – HDR
Jason Carbee – HDR
Jamie Krzeminiski - HDR

The Methods and Assumptions Document for the Rapid City Area MPO Metropolitan Transportation Plan and Bicycle and Pedestrian Plan Update was held immediately following the project Kick-off Meeting on Thursday, May 30, 2019 via Video Conference in the SDDOT Rapid City Region Conference Room and Pierre Video Conference Rooms. The Draft Methods and Assumptions Document was presented by HDR and the following items were specifically discussed with regard to each referenced section, with comments to be provided to HDR by June 14, 2019:

1. Study Schedule (Page 5) – The Schedule of the Draft Fiscally constrained plan deliverable was adjusted to March/April of 2020 as a result of the delay associated with the project Notice to Proceed.
2. Previous Studies (Page 6) – Kip Harrington and Brad Remmich identified additional and/or on-going previous studies that may be applicable to the project. Kip/Brad will provide a list of additional pertinent studies which should be referenced.
3. Study Advisory Team (Page 6) – It was noted that Brad Remmich will be replaced by Jerry Ortbahn as a result of Brad moving to a new position within the SDDOT.
4. Analysis Years/Periods (Page 7) – The baseline model year used will be 2018.
5. Analysis Years/Periods (Page 7) – Discussion was had regarding the project implementation time bands and clarification was needed from Mark Hoines (FHWA) to determine if the first ten years of implementation were required to be completed year-by-year or if five year time bands would be acceptable as with prior studies. Mark Hoines responded on June 13, 2019 (e-mail attached) stating that it would be acceptable to utilize five year increments as with past studies.
6. Traffic Operations Analysis (page 8) – It was suggested that it be clarified that the traffic volumes which will be used are adjusted non-summer/non-peak season volumes.
7. Travel Forecasting (Page 9) – It was discussed the model validation language should be revised as follows: "Model validation and operation documentation shall be provided. FHWA will be provided a draft version for review and comment".

8. Travel Forecasting (Page 9) – A new statement regarding model development should be added to read: “Once the fiscally constrained plan has been established, a 2045 planned network will be built and run. The planned network will include the E+C network, and the fiscally constrained projects that will impact the network operation (new links and capacity improvements).
9. Safety (Page 9) – Crash history data will be adjusted to reflect crash severity (major injury/fatal) and bike/ped/vehicular. The 20 highest vehicular crash rate intersections, 20 highest serious injury/fatal crash rate intersections, and 20 highest frequency serious injury/fatal bike/ped crash intersections will be identified.
10. Financial Plan (Page 10) – The fiscally constrained implementation time bands will be consistent with item 5 noted above.
11. Financial Plan (Page 10) – Language pertaining to construction cost estimates, revenues, and inflation for the fiscally constrained plan will be added as follows:
“Construction cost estimates will be calculated in base year (2020) dollars, but will be inflated to Year of Expenditure (YOE) dollars in the MTP. Similarly, revenues will also be inflated to YOE revenues. The inflation rates for each will be determined later in the project and the M&A document will be amended at that time to reflect the agreed-upon inflation values”.
12. Alternatives Prioritization/Major Street Plan (Page 10): Language to be added to identify reconciliation of corridor consistency across member agency jurisdictional plans will be addressed as part of the major street plan analysis.
13. Comments on the DRAFT M&A Document are due by June 14, 2019.

Appendix H. Needs Plan Tables

Table H-1: List of Identified Roadway Projects

Project ID	Corridor	From	To	Mode	Type	Length (miles)	Estimated Cost (\$ 2020)
1	Canyon Lake Dr	Sheridan Lake Rd	Soo San Dr	Roadway	Capacity Improvement	0.66	\$1,650,000
2	W Main St	Jackson Blvd	Mountain View Rd	Roadway	Capacity Improvement	0.20	\$500,000

Table H-2: Transit Projects Listing

Project ID	Project Name	Project Category	Project Description	Project Cost
T-1	Ridematching	Operations	A ride matching program and promotion of carpooling could be implemented to serve the entire MPO region	\$10,000
T-2	Vanpools	Operations	A vanpooling program could be implemented to serve all the MPO region	\$10,000
T-3	Voucher Program	Operations	Vouchers can be provided anywhere taxi or ride-hailing services are available.	\$200,000
T-4	Special Group Trips	Operations	Special Group Trips may be applicable in all MPO service areas.	\$50,000
T-5	Lifeline Service	Operations	Lifeline Services exist in the Northwest MPO service area and could be better marketed to individuals who are unaware of the services. Existing services operating through the Southwest MPO service area could be upgraded to more frequent routes with dedicated stops in Pennington County. New services could be implemented in the Southeast and Northeast MPO service areas.	\$200,000
T-6	Demand-Response	Operations	Demand-response services could be implemented in any of the four service quadrants to allow local circulation in small communities and to provide trips to and from Rapid City.	\$2,250,000
T-7	Commuter Express Bus Routes	Operations	Although services could be considered to any of the four service quadrants, based on population densities and travel demands, implementation of this strategy is most likely to be effective in the Northeast MPO and Southwest MPO study areas.	\$200,000
T-8	Regional Service	Operations	Regional bus services should be considered to any of the four MPO quadrants, with frequencies and equipment allocated based on population densities and travel demands.	\$750,000
T-9	Transit Service Hubs	Operations	Determine “hubs” or consistent destinations that are in need of service and add regular fixed routes	
T-10	Transit Safety and Accessibility Analysis	Operations	Conduct stop safety & accessibility analysis to determine potential improvements	

Project ID	Project Name	Project Category	Project Description	Project Cost
T-11	Service Expansion	Operations	Systematically add service early mornings and evenings	
T-12	Sunday Service Expansion	Operations	Plan on adding service in areas of highest transit need on Sundays	
T-13	Demand-Response	Operations	Add demand-response/flexible service to underserved communities and neighborhoods	
T-14	Reduced fares/Voucher Program	Operations	Examine the use of low-income reduced fares	
T-15	Public-Private Partnership	Operations	Explore the use of emerging mobility options, such as Transportation Network Companies (TNCs), to supplement paratransit services	
T-17	Transit Technologies	Capital Improvement	Provide search engines, web developers, and the public domain with General Transit Feed Specification (GTFS) data to ensure fixed-route public transit schedules and stop locations are easily accessible to the public by multiple means	
T-19	Bus Purchase	Capital Improvement	Purchase four buses each year for use by eligible senior and disabled service agencies	\$750,000
T-19	Bus Purchase	Capital Improvement	Purchase four buses each year for use by eligible senior and disabled service agencies	\$800,000
T-19	Bus Purchase	Capital Improvement	Purchase four buses each year for use by eligible senior and disabled service agencies	\$900,000
T-19	Bus Purchase	Capital Improvement	Purchase four buses each year for use by eligible senior and disabled service agencies	\$1,000,000
T-20	Bus Barn Improvements	Capital Improvement	Maintain and improve the Rapid Transit Bus Barn Facility	\$150,000
T-20	Bus Barn Improvements	Capital Improvement	Maintain and improve the Rapid Transit Bus Barn Facility	\$150,000
